++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.tele.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, soon to replace with Tnet-x1g on one and a PC NOS-switch on the other. And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there.

ampr.org IP Coordinator for California - Los Angeles and San Fernando Valley subnet (44.016.xxx.xxx)

"We're here to help, we don't loan tools" (Just kidding....put me on the list). Monday-Thursday 8 AM to 9 PM Pacific time, Friday 8 am to 5 pm.

Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals in amateur radio. The first manual was the DJ-590 and subsequent manuals included the 560,580 and 600 for Alinco. My contacts in the amateur radio community have helped other amateurs to know more about products, hidden features and new product offerings. The BBS will now included the latest info on YEASU and ALINCO products. If you have a product that you wish to

have evaluated for the general amateur community, please contact before sending.

If you have questions with regard to customer service at these companies, please forward to me and they will be passed to the company contacts.

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

++

Terrence R. (Terry) Redding WB5LMJ

DOMAIN: terry%red@lawton.lonestar.org
UUCP: . . . !rwsys!lawton!red!terry
PACKET: WB5LMJ @ WB5MJS.OK.USA.NA
Voice 405 536-8822, Ben's Place (Benjamin Franklin) BBS 536-6988 9p to 6a
PhD candidate, University of Oklahoma in Adult and Higher Education
Educational Advisor, American Radio Relay League
221 SW Crystal Hills Drive, Lawton, Oklahoma 73505

I am primarily an adult educator conducting research in self-directed
learning. I have been involved in the following activities:

- Teach licensing classes, since 1974.
- Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy
Club, Lawton Astronomy Club.
- Public speaking and publish on growth in volunteer organizations,
marketing adult and higher education and teaching amateur radio
courses.
- Research in adult learning theory, adult motivation and organizational
theory.
- Conducted a SAREX activity that involve seven communities, 21 schools
and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their

own equipment. I would like to see a turn-around here...

3904. Re: Special (vanity) calls

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-01 21:59:19 UTC
From: scott@hplvec.LVLD.HP.COM
Message-ID: <21870051@hplvec.LVLD.HP.COM>
Source record: 274659

In rec.radio.amateur.misc, rdewan@casbah.acns.nwu.edu (Rajiv Dewan) writes:

> A good rythmic call that has some dit-dah variation but is not too long
> is probably the best for really weak signal work. A call such as w9rd
> would be pretty nice. :)

In Colorado, a statewide linked repeater sytem known as the Colorado
Connection uses NN0A's call. What a great CW call! Easy, rythmic,
short and difficult to confuse with anything else.

> Sometimes I really wonder if the bands are *really* dead. Maybe everyone
> is listening and nobody is transmitting ;-)

While others have offered logical explainations for localized band openings, I'll also validate Pete's closing statement. I've not been at this for very long, and certainly haven't figured out the wonders of propogation, but sometimes it does seem that everyone is just listening.

On numerous occasions I've gone up to 15 meters when it seems absolutely dead, tuned around looking for anything interesting and finally called CQ just before giving up, only to have several booming signals answering my call. When all else fails, don't be afraid to call CQ on a "dead" band. Sure the only thing you're reaching might be your neighbor's TV :-) but it never hurts to try.

Ah yes, that was Art Gentry's repeater. I can still hear Millie's (W6MEP) sweet voice on the tape I.D.: ``This is the Los Angeles Repeater - K6MYK, Mount Lee, Hollywood'', once every 10 minutes or so. Art would get so mad at the kids abusing the repeater that about once per day he would come over the UHF link and threaten to turn the machine off. At that time I believe that was the ONLY repeater in L.A.

>and wondered about the 430 as a mobile rig. I have not used one.
>
>How sensitive is the final to SWR? How effective is the noise blanker?
One at a time! The finals have SWR shutdown protection which does
a good job of protecting the finals. They begin to shutdown, I
believe, at 2.5:1 SWR. Note, you still have output, just less.
The noise blanker isn't the best on the market, but it does a good
job. Make sure that your radio has the mod for the noise
blanker. You can download this mod from the Kenwood BBS at
1-310-761-8284.
>Does the 430 need an external speaker?
No, but depending on where you mount the radio, you might want one
anyway.
>How useful is the mobile mounting bracket?
Very! It is a solid way of mounting your radio.

Good Luck and Have Fun. I have used my 430 for 8 years, some
mobile, some at home, and I really like the radio. It has a
couple of anomolies, but nothing that precludes it from being one
of the best mobile rigs out there.

Since posting my collection of phonetic alphabets recently
I have found some further information. From a Hungarian
telephone directory the following Hungarian alphabet:

Andra's Be'la Cecil Do'ra Eleme'r Ferenc Gizella Hajnalka
Istva'n Ja'nos Katalin Luca Ma'tya's Na'ndor Olga Piroska
Queen Ro'bert Sarolta Ti'mea Ubul Vilmos Walter Xe'nia
Ypsilon Zolta'n

I now have reason to believe that the Amsterdam Baltimore
Edison Florida alphabet is [supposed to be] French.

I reckon it *is* a single word 'baud' for both cases, but that might be the
difference between English English and American English.

Since KC7AA would indicate an advanced class (2x2) the most logical would be the 2x3 for the novice/tech. I don't know if the 1x3's for the tech are gone as they are here in California. All new novice, tech, and general class gets a 2x3 call.

I would not pay the $3.00. Instead I spent .29 on a letter of complaint to RS
at Fort Worth, TX and about 3 weeks later what came in the mail. A RS catalog
and a letter of apology for the "shabby treatment" I received in the store. It
was sort of funny, I never mentioned anything about shabby treatment at all.
Just that after purchasing thousands of dollars of parts and computer stuff I
refused to pay $3 for their catalog.

>: >I was talking to a friend about how dead the bands seemed lately - 10 meters
>: >especially, yet we both noted the following:

A few notes on 10 meters:

1) Propagation on 10 meters is usually either great or terrible. You are either working the world with 10 watts SSB or not working anywhere. There are a few exceptions, but generally, it's either hot or cold.

2) The level of sunspot activity is very important. The last maximum was in 1989, with excellent conditions lasting for over 2 years. We are now heading to a minimum in the 11-year cycle. (11 years is an average; the current cycle was much shorter) The next maximum will be around the end of the decade.

3) In most of the U.S., 10m tends to be dead during the summer, even during sunspot maximums. It starts picking up in the fall. November/December tend to be good months. Spring can be good too.

4) 10m can be downright dead during sunspot minimums. With the solar flux hovering below 100 like it is now, you can expect to find limited activity. A couple of years ago, when the flux is over 200, things were great. As expected, some of the 10m-only rigs like the Radio Shack HTX-100 bought back then can be had for a big discount now.

5) Sporadic E propagation occurs most frequently around the two solstices (December and June). Contacts made with Es are generally between 400 and 1000 miles, and are subject to rapid fading. You may want to turn on your 10m rig around Christmas time to get in on some of this activity.

6) The guys with high antennas and power can sometimes still get through when conditions are not great.

>[interesting discussion about measuring characteristic impedance of a
>coaxial line. . .]

>. . .Probably the cheapest and most reliable method is to read the numbers
>stamped on the side of the coax, and look them up in a reference book..

Cheapest, sure, but not entirely reliable. My eyes were opened recently
when I did a careful measurement, using two different methods with a network
analyzer, of Z0 of several lengths of "RG-58" coax from my junk box. Some
were as high as 61 ohms. In practice, this won't make a significant
difference for most amateur applications, but could really goof up a
phased array feed system.

My standard techniques at home are with a trimpot at the cable end, and
either TDR or a homebuilt resistance bridge. With the bridge, I adjust the
pot until the resistance looking into the cable doesn't change as I vary
the frequency.

> 1. What's the best way to hook up the unit at home so that I don't
> use a battery pack?

Buy (for about $12) one of the 6-AA-cell battery packs and wire it for external juice (up to 12V is OK => 5W out on high power, and it gets warm). Use whatever sort of external connector on the wire that you like. (I use 6-pin molex as a standard "12V connector" which lets me run the radio off car, gel-cell, 12V supply, etc.) You'll have to silver-solder to the connectors or just pressure-fit. You'll see what I mean when you look inside one.

Or, obtain a dead NiCad pack, tear it open, yank out the guts, and wire it up up similarly. This is cheaper than buying a 6-cell pack for the purpose -- once you have a dead NiCad pack and decide not to reload it.

Beware, all this frequent battery switching will break your power contacts on the radio in 2-3 years. Call Yaesu (310-404-2700, main number, press 3 for parts, 8-4 M-F PST) and pre-order some new ones. They're cheap and easy to get. :-)

> 2. What's the difference between the FT-411 and the FT-411E?

The IF was increased from 17.3 to 21 (?) MHz to solve common intermod problems (ham band is 17.3 away from common business channels). Maybe other enhancements too.

> Maybe we need QRP days on AO21...

Hey, what if the next SAREX mission dedicated some passes to QRP contacts? The rules might be: HTs only, maximum 5 watts, dipole antenna only, rubber ducks preferred. Honor system of course. Maybe ask each station to announce transmitter power and antenna type along with their call sign.

This would be *fun*. Any chance one of you SAREX coordinator folks could forward the idea?

: dynamic range: 53 58 53 60 69
: (dB, 20kHz off)

It's even worse than that. The above numbers are for 20 kHz spacing.
If you measured the IMD for OUT OF BAND interfering signals, the Rat Shack
unit would look even better because of its tighter front-end filtering.

3924. Stolen ICOM 2-meter

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-06 03:33:05 UTC
From: haggart@ssrl01.slac.stanford.edu
Message-ID: <1993Nov5.193305.1@ssrl01.slac.stanford.edu>
Source record: 274650
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

A 2-meter HT was stolen from my car last weekend in Sunnyvale, California.
It is distinctive in that it has a no-name 12V battery that makes this
normally tiny radio very tall. (The thieves left behind the small plastic
cover that goes on the bottom of the radio when the external battery
pack is removed.)

ICOM 2 SAT, serial number 4220

If someone tries to sell you this radio, please contact me or the
Sunnyvale Police.

Thank you!

Dave, following is a file telling how to expand the range of the HTX100 from 30 to 26 mhz. I have not tried it. (I copied it from a Packet bulletin.

I'm already using Traksat 2.80; I downloaded it from GEnie.

TTYL and I hope the mod file works for you. --Leigh/KM6JE.

---

* Extended Frequency Coverage from 26.000 Mhz to 30.000 Mhz

-------- --------- -------- ---- ------ --- -- ------ ---

Thanks Percy for being the first one.

Remove bottom cover. With the radio upside down and display facing you remove the synthesizer board with the four screws, this is near the front of the radio.

This gives access to the small board underneath with the surface mount components on it. Locate the processor chip IC401 (UC-1208).Locate pins 28 and 29 which are on the right hand side of the chip and are 4th and 5th from the top. Note they are bridged with solder.

CAREFULLY cut the copper track NEXT to the pins. DO NOT attempt to unsolder the two pins form the board and use a GROUNDED soldering iron. Locate the two rows of connector pins above the chip.

On the bottom row locate the last pin on the right. Verify with a VOM that this pin has + five volts. Solder a 10k (1/4 w) resistor between this pin and pins 28 and 29 on IC401.The synthesizer will now tune from 26.00 Mhz to 30 Mhz.

Thanks for the response guys, to my problem on my miserable little ground plane for 2M that I put out and bring back in. Here's the summary of suggestions for the group. /

My favorite is that of Ross, ve6pdg (see below). I'll probably use a combo of them :-> ...

jim - ad4je

responses follow...

From: Scott Richard Rosenfeld <uunet!wam.umd.edu!ham>

Invoke PRB-1. Federal law takes precedence. I mean, it's not like it's always out there, right?

Scott NF3I

From: uunet!ERA.COM!mark (Mark Feit)

Certainly. Check the rules carefully, and see if it applies to permanent structures or *ANYTHING* placed outdoors for any length of time, however short. Most associations restrict things that are placed outside more or less permanently. I'd try one of the following (in order of personal preference):

Common Sense Approach: Argue that because the antenna is not outdoors permanently, it is, as you pointed out, no different than hanging the power cord out the window to vacuum the car. Don't expect this one to work.

Legal Nitpicking Approach: Try the selective enforcement angle. If they allow things like cordless/cellular phones, boom boxes or radio controlled toys to be operated "outdoors," they must also allow your antenna as long as it's not out there for extended periods of time. (If you *really* want them to pay attention, an attourney quietly taking notes throughout the whole proceeding probably wouldn't hurt.)

General Nitpicking Approach: If you use your antenna indoors, then it's not an outdoor antenna, even though it's physically outdoors. If you'd really like to convince them, bring a Diamond X-500 to your hearing and show them what a REAL outdoor antenna looks like.

Wile E. Coyote Approach: Build the antenna into a piece of your lawn furniture. (I presume your association doesn't dictate what makes and models of furniture you can put outside...)

From: uunet!cs.athabascau.ca!rwa (Ross Alexander)

Explain to them that to overcome the losses of using an indoor
antenna, you'll have to raise power. Stress the fact that increased
power indoors means they'll be exposed to greatly increased
RADIATION (oooohhhhh!! bad nasty scare word!). Let them know they
have absolutely no legal remedy against that, and offer to ameliorate
the situation by using an external antenna.

regards,
Ross ve6pdq

From: uunet!net.com!larson (Alan Larson)

Move.

Or, use an indoor antenna, and somewhat more power. About 250
watts of SSB with an indoor antenna will take out most VCRs in
the building.

Alan

From: "msanders" <uunet!smtpgw.sim.es.com!msanders.Macintosh_Mail_Server>

I would suggest a 2M J-Pole. I have several at home, and can suspend one from
the ceiling, push a tack through the top and pin it to the wall, or use your
imagination. This is made from 300 ohm twin lead, can be rolled up (if you use
the flexible twin lead and not the more stiff foam filled stuff), and you can
solder on a BNC connector, then use the length you need of coax with a BNC on
each end, hooking it up when you want, and taking it off when you want (like if
a complaining neighbor is pounding on your door).

Good Luck,

Milt

That's true, but the numbers you quote don't really tell why the
HTX202 is so much better than the wideband scanners, er HTs, sold
by others. The RS intercept is higher, but the data posted is for
in-band signals. Where the RS unit really shines is when you realize
that out-of-band signals are attenuated an additional 30-50 db by
the narrow front end filters which will place out-of-band mixing
products 60-100 db further down than in-band mixes. The adjacent
channel performance is basically a measure of the IF filtering.
There too the RS unit shines.

This is a very good radio for areas with high strength commercial
signals. That's nearly everywhere near a large city today.

3932. Re: "outdoor antenna" ban

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-06 14:22:51 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9311060622.aa17547@paris.ics.uci.edu>
Source record: 274663

Hi Jim:

Just a quick note for you regarding your antenna restrictions.

1. Check to see if the prohibition is in your lease or rental agreement (or is referred to in there as in a general plan down at the courthouse). That is probably what it is.

2. If it is in your lease or is a general plan, DO NOT try to "invoke" PRB-1, this is not correct, and could cause more harm than good. PRB-1 does NOT mandate anything at all, and does NOT affect any contractual agreements anyway (it is meant only to ASK cities and towns who have restrictive ordinances to please cooperate with hams, it does not supercede their authority.... except that a very few sympathetic federal judges have occasionally seen some restrictions as just too much).

2.5 If the restriction is not in your lease, and it is a municipal ordinance, then PRB-1 MIGHT be useful, depending on their receptivity and your committment to going to court (not usually a good idea). PRB-1 gives suggestions to the locals, and explains the Federal interest in having hams free to communicate, and SOME areas listen to this and SOME areas don't. There have been Federal court cases that support PRB-1 affecting the local laws, and some that say PRB-1 has very little effect on local laws. Again, use the best schmoozing and reasoning you have at your disposal, local clubs and emergency groups may be able to help. Threats and court action are a very last resort, if a resort at all.

3. If living where you are living is important to you, and you do not want to give up ham radio, check with your local ARRL Volunteer Counsel. You can get a free half hour consultation, and can go from there on whatever you decide.

4. The argument about having to run more power with an indoor antenna and increasing "radiation" is a dangerous one legally, because the landlord (or tenants) can look to the nuisance provisions of the lease to stop you from using the radio, and just might prevail (and you probably don't want the time and expense to defend such a crazy lawsuit!)

My personal advice: try real hard with "reason" and get them to like you and respect ham radio. If this doesn't work, try the modest indoor antenna approach - and be a real good citizen so that they will eventually come around. If there are TVI complaints and stuff, work with them as best you can. Otherwise, not only will you probably

suffer (or need to move), but all ham radio suffers from the impression we create.

We, as hams, have no "right" to use ham radio. IF the day comes when a lot of folks don't like hams, they could all push their congressfolks to pass laws abolishing ham radio here in the USA (or giving the spectrum over to other uses consistent with international law - well, maybe, if we have a president who cares about international law at the time). It is important not to get too cocky about our hobby. I believe we need to work with it as an important gift, and to nurture the public's ideas about us.

3934. Info needed on Yaesu FT620B

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-06 15:50:08 UTC
From: robertm@ursula.ee.pdx.edu
Message-ID: <2bi9bg$f6i@ursula.ee.pdx.edu>
Source record: 274578

First let me tell you that I am very new to ham radio. I recently picked up a rig from a friend who had bought it as a "fixer-upper" The unit is a Yaesu FT620B. I imagine it is rather old, I'm not sure how old though. There really isn't anything wrong with it, however it was missing the power cord. The plug receptical in the rear panel has four prongs on it and I don't have a clue as to what to do with it. I would greatly appreciate any of the following pieces of information:

1) Information on how to contact Yaesu in order to order a power cord for the device.

2) Locations where I might order the cord from if Yaesu no longer makes it.

3) Photocopies of the manual and schematics. If someone out there does have access to the manual and schematics and no longer needs them for some reason I would be happy to purchase them from you. If you do still need them let me know how much it would cost to copy and mail them and I will send the needed amount.

4) A brief description of what the capabilities of this unit might be.

5) Anything else you can think of that someone new to this might not know to ask.

Thanks in advance to anyonone who might be able to offer some help to me on this,

Rob Mohr

P.S. If possible please respond via personal E-mail as my access to USENET is not always reliable. The E-mail address to send responces to is:

robertm@uplherc.upl.com

Thanks again.....

|>
|> Duane
|>

Duane is right. Also, in 5 or 6 years, the price of the rigs may go up.
I'd like people to do 2 things:

1. Fire up the 10M rigs aperiodically just to see if 10M is alive and
keep the electrolytics conditioned within the rig.

2. Check for drug trafficers and 'free banders' on the low end of the
band. Once they move in, we'll have hell getting rid of 'em.
Might be a chance for you to practice some of your code here. :-)
Another reason to learn the code. They won't know who it is or what
is going on. You simulate a 'fox hunt' by keying a sequence, moving
vfo a few hundred Hz, keying another sequence and move back and forth
simulating what must be a QSO in progress for the purpose of tracking
them down. :-)
Of course, somebody is gonna jump on my case about FCC regs here, but
hey, the FCC will probably be occupied with the bozos, not me. Is the
FCC going to give up CW like the other agencies???? :-) The
mind boggles at the possibilities here. Kinda like gun control!

Presented here for your entertainment.

... well the irritating thing is that many (most?) stores don't tell you about the coupons in the back of the catalog. It's on page 70 or between 70 and 71 ... tear out things. I used my $3.00 discount coupon to purchase the catalog while buying a null modem adapter. Don't recall if the purchase had to be $5 to get the discount. I'm sure it had to be at least $3 to cover the catalog. :-)

My brother called me from another store where they couldn't locate an item in the catalog. I told him the name of the product from my '93 catalog but they didn't know what it was ... and they wouldn't give him a catalog. He called me to get get the page number and tried to get them to give him a catalog if he gave them the page number. He made his purchase but that particular store certainly didn't earn any points that day! Wish I had known about the coupon in the '94 catalog before he called me.

Their "upfront" charge for the catalog is bound to make a lot of folks mad ... more of their managers should point out the discount coupons. I see the $2.95 on the top right corner ... don't look and further to the note describing the discount coupont offer. Didn't work for SEARS either.

3937. Scanner for sale from Canada

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-06 20:32:08 UTC
From: Timothy_Notting@mindlink.bc.ca
Message-ID: <31718@mindlink.bc.ca>
Source record: 274667

REALISTIC RADIO SHACK SCANNER
300 CHANNEL PRO-2004 VHF-UHF
DIRECT ENTRY PROGRAMMABLE AM FM RECEIVER
MODIFIABLE TO RECEIVE CELLULAR FREQUENCIES
CAN BE UP GRADED TO PRO-2006 WITH SIMPLE MODIFICATIONS
ASKING PRICE $275.00 FIRM
INQUIRES PLEASE LEAVE NET-MAIL
Please note Scanner has been modified to receive cellular and works perfectly
As well scanner can be simply modified to upgrade to the PRO-2006 level.

3938. CW,RTTY,AMTOR,PACTOR,SSTV,WEFAX etc Receiver

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-06 21:06:32 UTC
From: geremia@ctron.com

Hello All,

I was wondering if anyone knows of a GOOD receiver for
the subject mentioned services over radio. I was thinking about
the Kantronics Kam, but have been hearing not so good stuff about
it. Plus I only want to receive, so I would also be paying for
the transmit section of the device. But if it was really good,
I probably would pay the money... Any help would be appreciated..

Thanks.. Pete Geremia

SB SAREX @ AMSAT $STS-58.025
SAREX Keps & Update: 10/28

Thursday 10/28/93 @ 08:00 UTC

The last school group contact was completed yesterday. The Portsmouth HS in Portsmouth, New Hampshire had a telebridge contact using stations in California (Ralph Warner, N6MNN) and Texas (Bob Douglas, W5GEL). The students asked 5 questions during this bridge contact.

Hams across the U.S. and around the world continue to work the Shuttle Columbia on both voice and packet. Moreover, the completion of school group contacts has cleared several school backup passes for possible general QSO opportunities. While the SAREX Working Group cannot fully guarantee availability, there is a high probability that the STS-58 crew will be ready to take general calls over the continental U.S. on these passes. Two of these "scheduled" passes remain. These include orbit 178 at MET 11 days 1 hour 42 minutes (10/29 at 16:35 UTC) and orbit 192 at MET 11 days 22 hours and 29 minutes (10/30 at 13:22 UTC). Please note that the astronauts operated voice during yesterday's "scheduled" pass which occurred on 10/27 at 14:59 UTC (Orbit 145). Also note that hams on

the ground heard or worked the Shuttle Columbia crew on several other orbits yesterday.

Element set GSFC-031, generated by Ron Parise, WA4SIR, is the official SAREX set for today. Please note that there is only a six second difference between element set GSFC-025 (released two days ago) and element set GSFC-031.

SB SAREX @ AMSAT $STS-58.025
SAREX Keps & Update: 10/28

Thursday 10/28/93 @ 08:00 UTC

The last school group contact was completed yesterday. The Portsmouth HS in Portsmouth, New Hampshire had a telebridge contact using stations in California (Ralph Warner, N6MNN) and Texas (Bob Douglas, W5GEL). The students asked 5 questions during this bridge contact.

Hams across the U.S. and around the world continue to work the Shuttle Columbia on both voice and packet. Moreover, the completion of school group contacts has cleared several school backup passes for possible general QSO opportunities. While the SAREX Working Group cannot fully guarantee availability, there is a high probability that the STS-58 crew will be ready to take general calls over the continental U.S. on these passes. Two of these "scheduled" passes remain. These include orbit 178 at MET 11 days 1 hour 42 minutes (10/29 at 16:35 UTC) and orbit 192 at MET 11 days 22 hours and 29 minutes (10/30 at 13:22 UTC). Please note that the astronauts operated voice during yesterday's "scheduled" pass which occurred on 10/27 at 14:59 UTC (Orbit 145). Also note that hams on the ground heard or worked the Shuttle Columbia crew on several other orbits yesterday.

Element set GSFC-031, generated by Ron Parise, WA4SIR, is the official SAREX set for today. Please note that there is only a six second difference between element set GSFC-025 (released two days ago) and element set GSFC-031.

STS-58

SB SAREX @ AMSAT $STS-58.025
SAREX Keps & Update: 10/28

Thursday 10/28/93 @ 08:00 UTC

The last school group contact was completed yesterday. The Portsmouth HS in Portsmouth, New Hampshire had a telebridge contact using stations in California (Ralph Warner, N6MNN) and Texas (Bob Douglas, W5GEL). The students asked 5 questions during this bridge contact.

Hams across the U.S. and around the world continue to work the Shuttle Columbia on both voice and packet. Moreover, the completion of school group contacts has cleared several school backup passes for possible

general QSO opportunities. While the SAREX Working Group cannot fully guarantee availability, there is a high probability that the STS-58 crew will be ready to take general calls over the continental U.S. on these passes. Two of these "scheduled" passes remain. These include orbit 178 at MET 11 days 1 hour 42 minutes (10/29 at 16:35 UTC) and orbit 192 at MET 11 days 22 hours and 29 minutes (10/30 at 13:22 UTC). Please note that the astronauts operated voice during yesterday's "scheduled" pass which occurred on 10/27 at 14:59 UTC (Orbit 145). Also note that hams on the ground heard or worked the Shuttle Columbia crew on several other orbits yesterday.

Element set GSFC-031, generated by Ron Parise, WA4SIR, is the official SAREX set for today. Please note that there is only a six second difference between element set GSFC-025 (released two days ago) and element set GSFC-031.

STS-58
1 22869U 93065A 93300.17699070 0.00133671 99048-5 24183-3 0 318
2 22869 39.0252 71.9896 0012817 34.2105 325.9529 16.00500857 1383

Satellite: STS-58
Catalog number: 22869
Epoch time: 93300.17699070 (27 OCT 93 04:14:51.** UTC)
Element set: GSFC-031
Inclination: 39.0252 deg
RA of node: 71.9896 deg Space Shuttle Flight STS-58
Eccentricity: 0.0012817 Keplerian Elements
Arg of perigee: 34.2105 deg
Mean anomaly: 325.9529 deg
Mean motion: 16.00500857 rev/day Semi-major Axis: 6651.1630 Km
Decay rate: 0.13E-02 rev/day*2 Apogee Alt: 281.30 Km
Epoch rev: 138 Perigee Alt: 264.25 Km

NOTE - This element set is based on NORAD element set # 031.
The spacecraft has been propagated to the next ascending
node, and the orbit number has been adjusted to bring it
into agreement with the NASA numbering convention.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

SB SAREX @ AMSAT $STS-58.025
SAREX Keps & Update: 10/28

Thursday 10/28/93 @ 08:00 UTC

The last school group contact was completed yesterday. The Portsmouth HS in Portsmouth, New Hampshire had a telebridge contact using stations in California (Ralph Warner, N6MNN) and Texas (Bob Douglas, W5GEL). The students asked 5 questions during this bridge contact.

Hams across the U.S. and around the world continue to work the Shuttle Columbia on both voice and packet. Moreover, the completion of school group contacts has cleared several school backup passes for possible general QSO opportunities. While the SAREX Working Group cannot fully guarantee availability, there is a high probability that the STS-58 crew will be ready to take general calls over the continental U.S. on these passes. Two of these "scheduled" passes remain. These include orbit 178 at MET 11 days 1 hour 42 minutes (10/29 at 16:35 UTC) and orbit 192 at MET 11 days 22 hours and 29 minutes (10/30 at 13:22 UTC). Please note that the astronauts operated voice during yesterday's "scheduled" pass which occurred on 10/27 at 14:59 UTC (Orbit 145). Also note that hams on the ground heard or worked the Shuttle Columbia crew on several other orbits yesterday.

Element set GSFC-031, generated by Ron Parise, WA4SIR, is the official SAREX set for today. Please note that there is only a six second difference between element set GSFC-025 (released two days ago) and element set GSFC-031.

STS-58
1 22869U 93065A 93300.17699070 0.00133671 99048-5 24183-3 0 318
2 22869 39.0252 71.9896 0012817 34.2105 325.9529 16.00500857 1383

Satellite: STS-58
Catalog number: 22869
Epoch time: 93300.17699070 (27 OCT 93 04:14:51.** UTC)
Element set: GSFC-031
Inclination: 39.0252 deg
RA of node: 71.9896 deg Space Shuttle Flight STS-58
Eccentricity: 0.0012817 Keplerian Elements
Arg of perigee: 34.2105 deg
Mean anomaly: 325.9529 deg
Mean motion: 16.00500857 rev/day Semi-major Axis: 6651.1630 Km
Decay rate: 0.13E-02 rev/day*2 Apogee Alt: 281.30 Km
Epoch rev: 138 Perigee Alt: 264.25 Km

NOTE - This element set is based on NORAD element set # 031.
The spacecraft has been propagated to the next ascending
node, and the orbit number has been adjusted to bring it
into agreement with the NASA numbering convention.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

Source record: 274669

Greetings,

I haven't used my HT for about a year and a half. When I dug it out of the box I found that I didn't have the manual. Could someone either post or send me Kenwood's USA address? Or if there is an electronic version of the TH-26AT manual somewhere, where can I find it?

jonathan bucki
n9mks

p.s. if you own one of these, and are feeling a bit kind, please send me a few instructions, I'm completely lost and I don't know anyone who has a TH-26AT in this area.

K2PH@CBNEWSJ.CB.ATT.COM typed this about Re: BAUD VS BAUDS

K>> AGRI098@UNLVM.UNL.EDU (Roy): IS THE TERM BAUD LIKE MOST PEOPLE USE
K>> OR IS IT BAUDS LIKE THE ARRL FOLKS USE?
K>> Roy

K>Depends. Singular is baud. Plural is bauds. If it's more than one,
K>bauds is correct.

K>73,
K>Bob K2PH

Doesn't BAUD fall into the category of words like DATA? It remains the
same.

Ken

'lo all!
I was snopping at arrl.org and I saw a lot of progs that I want to
come to my account... but the problem is that ARRL's BBS doesn't
support (does it?) ftp.... and a call from Chile to USA is too
expensive to do.. :)
I'm looking for a good ftp site where U can login as anonymous
(or guest or anything U like..) and get all teh progs U want.....
If somebody have a clue to do it please let me know.... please don't
e-mail to this account but to rrodrigu@loa.disca.utfsm.cl... and
please don't post replys on netnews 'cause I haven't an easy way to
acces news... :(
Thanks in advance for any information.......

ROD.
CE6NUG
rrodrigu@loa.disca.utfsm.cl
ce6nug@ce6fyt.radio.cl

You can anonymously log into world.std.com (192.74.137.5) and change
directory to: /pub/hamradio/arrl/Server-files

where you will find ALL of the ARRL files from their info server.

I receive updates directly from them, and when I do, I turn right around
and place those updates onto the World system.

While on the World, feel free to browse the rest of the hamradio area.

73,
Scott

The following is late news about Amateur Radio for Radio Amateurs as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR RADIO NEWSLINE, INC. -- formerly the WESTLINK RADIO NETWORK. The electronic version of newsline is posted on this CBBS twice monthly. For current information updates, please call (213) 462-0008, (407) 259-4479, (708) 289-0423, (513) 275-9991, or (718) 353-2801. For the latest breaking info call the Instant Update Line at (805) 296-2407. To provide information please call (805) 296-7180. This line answers automatically and will accept up to 30 minutes of material.

Check with your local amateur radio club to see if NEWSLINE can be heard weekly on the air in your area.

Articles may be reproduced if printed in their entirety and credit is given to AMATEUR RADIO NEWSLINE as being the source.

For further information about the AMATEUR RADIO NEWSLINE, please write to us with an SASE at P.O. Box 463, Pasadena, CA 91102.

Thank You

REPEATER FINED

A repeater owner has been fined five thousand dollars because
the FCC says that his system was heard transmitting on a
frequency in an aeronautical communications band. The case
involves William A. Krause, WA2HDE of Ceder Grove, New Jersey.
The FCC says that on August the 30th, its New York City Field
Office received a complaint from the FAA about a signal on 243
Mhz that had appeared on receivers at two airports over the
previous five days.
The FCC says that the next day it used its direction finding
equipment to trace the signal to a ham radio repeater installed
atop a building at 2 Penn Plaza in Manhattan, New York.
Subsequent investigation by the FCC determined that the repeater
was being operated by WA2HDE. The commission says that the
repeater transmitter was either operating off of its coordinated
frequency of 224.66 MHz or that it had developed a high level
spurious emission at 243 Mhz.
According to the commission, 243 MHz is designated as the
international emergency and distress channel to be used by radio
beacons in the Marine and Aeronautical Radio Service. 243 MHz is

automatically monitored by a set of low earth orbiting satellites called Sarsat Cospas. These birds are routinely used in search and rescue operations and are maintained as a joint venture between the United States, Canada and Russia.
The FCC contends that during the time that Krause repeater transmitter was operating on 243 MHz it had the potential to block emergency radio communications over a very large geographic area. Because of this the FCC says it took the action to issue the five thousand dollar fine as a part of its continuing effort to preserve the integrity of this important aeronautical radio system hat they say pilots depend on for safety while in flight. WA2HDE was given thirty days to file an appeal.

******
TV STATIONS FINED FOR KID ADS

The Federal Communications Commission has also notified four television stations they will be fined for exceeding limits on commercials aired during children's shows. A 1990 law forbids stations from broadcasting more than ten and one half minutes of commercial material an hour during children's programming on weekends, or more than twelve minutes per hour on weekdays. According to the published news reports, the agency issued a Notice of Apparent Liability to Monetary Forfeiture against the licensee of KPLR-TV in St Louis and said it intends to impose a $30,000 fine. KXRM-TV in Colorado Springs will be fined $25,000, while the licensee for KTTM-TV in Huron, S.D. and KTTW-TV in Sioux Falls, S.D. will be fined $27,500.
The license holders have the customary 30 days to respond to the violation notices but it may be hard for any of them to find an excuse for their actions. It seems that the stations themselves admitted to the violations when they supplied the FCC with the data required for license renewals.

*****
SENATE & HOUSE SUPPORT GROWS

Ninety seven members of the United States House of Representatives and fifteen US Senators have now become co-sponsors of the Amateur Radio Service Joint Resolution which was introduced into both houses of congress last May. At its meeting last January, the ARRL's Board of Directors paved the way for the joint resolution with a resolution sponsored by New England Division Director Bill Burden, WB1BRE. Based on the Burden motion, the Board voted to instruct its Washington representatives to seek formal recognition from the 103rd congress of the role played by the Amateur Radio Service. This, as a national resource in preparation of and relief from disasters and in helping to foster technical progress in electronics.
Representative Mike Kreidler of Washington State was an

original co-sponsor of the House version of the resolution and he has some strong words of support for the Amateur Radio service. According to Kreidler, it is about time for Congress to recognize the achievements of our nations hams. He says that with the service approaching 600,000 licensed radio amateurs in the United States, he is certain that every member of the house has had similarly favorable experiences with the amateur community and will also support this resolution. So far, 97 of his fellow congressmen and women have followed his lead.

*****
ARRL ELECTIONS

While there are elections taking place in several ARRL divisions this fall, none is more contested than the race for the seat of Director for the Southeastern Division. There, an incumbent with more than a decade in office has a lot of competition at the ballot box. Three amateurs are challenging incumbent Frank Butler, W4RH, of Florida.
Amateurs in the Southeastern Division have a choice: Go with a familiar name -- or choose change. Incumbent Frank Butler has held the office for 13 years. Butler sez he's always available to assist League members with problems. But others say it's time for a new face to lead the Division. Georgia resident David Shiplett, AC4MU, sez the League needs to get back in step with the amateur community. Shiplett is joined in the race by Rudy Hubbard, WA4PUP, currently ARRL's Section Manager for Northern Florida. Hubbard has heavy involvement in emergency communications. Also in the race is Florida resident Alan Page, KE4WO. Page sez he'll keep amateur radio moving in an upward direction. November 19th is the day all 4 candidates anxiously await -- that's when the ballots will be counted.
In addition to the Southeast, ARRL elections are being held in the Delta, Dakota, Midwest and Pacific Divisions as well. The Director's elected later this month will serve a 2-year term that starts January first of 1994.

*****
SAREX - STS 58

STS-58, the latest in the series of Shuttle Amateur Radio EXperiments called SAREX, was a tremendous success. The fourth and final flight of 1993 racked up near-perfect contacts with 17 school groups ... many reporting full quieting contacts with the spacecraft from horizon to horizon. An outstanding one took place on October 21st, when the Lycee Gaston Febus school, in Pau, France, had a telebridge contact with the astronaut. Jean Marc Dumont, the French school coordinator, reports that over 10 thousand students in France listened to the conversation through a national repeater!
Hundreds of school children in the United States were thrilled

by direct talks with the STS-58 astronauts and thousands more listened in.
The general ham population also had a great time. This was the longest shuttle mission to date ... 14 days ... and the crew dedicated much of their second week in orbit to general QSOs ... several hundred of them ... and packet, with well over 800 packet contacts reported at this time. During the flight, Bill McArthur, KC5ACR, radioed back ... "Thanks for all the great QSO's. KC5AXA ... Marty Fettman ... KC5CKM, Rick Searfoss, and I love them. We're doing human metabolic and cardiovascular experiments in the lab today."
The SAREX Working Group, in charge of the flight, said "This was a testament to the outstanding support and preparation by the astronauts on-orbit and the SAREX team on the ground and in Mission Control."
QSL information for STS-58 ... send cards to ARRL, STS-58 QSL, 225 Main Street, Newington, Connecticut 06111. Allow six to 10 months for a reply.

*****
SAREX 10TH ANNIVERSARY

This marks the 12th time SAREX, the Shuttle Amateur Radio EXperiment, has flown ... and it's the last SAREX mission for this year. Next up, in December, will be a shuttle flight dedicated entirely to the task of repairing the Hubble Telescope. Next year, two SAREX flights are scheduled at this writing. STS-60, in January, with astronaut Charles Bolden and Cosmonaut Sergei Krikalev ... and STS-59, in April, with Jay Apt and Linda Godwin.
If you would like to know more about the history of SAREX, there's a story in the November issue of QST magazine ... commemorating the tenth anniversary. That's right, Owen Garriott led the parade in November, 1983!

*****
INDIA QUAKE

News stories are applauding the work of ham radio operators relief efforts to the survivors of the recent earthquake in India. The press services have reported that twenty six ham radio operators have set up a network to help coordinate relief efforts to the 120,000 people that were left homeless by the September 30th trembler.
According to Sirama Suri VU2MY, in rural India telephones can be as much as 25 miles away. There he says, it has been Amateur Radio operators that have been the ones who have put together a communications network to aid these earthquake victims.

*****
DXCC UPDATE

In DX, the ARRL's DXCC desk says that it has received 1330 applications for new awards and endorsements. That's a mega total of 95,212 individual QSL cards which maker it the largest number of cards received in any single month since September of 1990.

*****
BURUNDI

Famed DXer Baldur Drobnica, DJ6SI, is reportedly active as 9U5DX. He was heard on 24.892 MHz at 14:13 UTC, 14.025 MHz at 20:50 UTC and 18.081 MHz at 20:57 UTC. The length of his stay in Burundi is unknown. QSL direct to DJ6SI at his Callbook address.

*****
THP LEAVES U.S. MARKET

The worsening international monetary condition has now directly affected Amateur Radio. This, with the announcement by Tokyo Hy-Power Labs Inc. that it will terminate export sales from Japan to the United States.
Tokyo Hy-Power manufactures a wide variety of ham radio related equipment including six meter transverters, 2 meter and 70 centimeter power amplifiers and the worlds only tri band hand held radio. A hand held that operates on both HF and VHF.
For the past several years Tokyo Hy-Power has been represented in the United States by Orion Business International of Fresno, California. According to a FAX from Loren Pleet of Orion, the President of Tokyo Hy-Power Labs cited the abnormally high Dollar to Yen exchange rate and the severely depressed economy of Japan as the major factors in reaching this decision. Pleet said that Orion Business International was shocked when it heard of the decision by Tokyo Hy-Power to abandon the United States market. He says that despite Orion's efforts to try and continue the flow of equipment from Tokyo Hy-Power Labs the decision made in Japan appears to be irreversible.
Tokyo Hy-Power was never one of the heavyweights in the US marketing arena, but it is far from a tiny operation. In fact, its products were well known worldwide before they were ever seen by hams in the United States. Even though the United States is considered the strongest amateur equipment market in the world, the dollar to yen exchange rate is making it harder and harder for all Pacific Rim nations to turn a profit selling their goods to us.

3951. Help! connect my HT to Amp

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-07 11:04:51 UTC
From: ee_hflo@uxmail.ust.hk
Message-ID: <1993Nov7.110451.1436@uxmail.ust.hk>
Source record: 274544

Dear All hams,

I got problem in connect my HT to Linear Amp.

equipments:
- Diameter 2 meter VSWR meter
- Stardard C160 (6v batteries)
- Yaesu FT-411 (borrow from my friend) (7.2 batteries)
- Daiwa 80 Watt Linear Amp
- Car 12 volt lead acid battery
- Diameter 2 meter Vertical Aerial X-50 (max 200 watt, with 4.5db in 2 meter)

Connection:

HT--(a 1 feet cable)--Linear AMP---(Meter)---(10 meter cable)---Aerial

I have connected my friend's Yaesu FT-411 to the Amp. It work very good.
and hit most repeaters with very clear signal.

However, when I tried to connect my C160 to the amp,the "on air" led
hold after I release the PTT. The signal that receive also very good.
It did not happen in my friend's FT-411.

Why the Amp continue to transmit after PTT released ? Why don't happen
in the FT-411 ?

THE GREAT LAKES AMATEUR RADIO CLUB
VEC
3040 HARRISON STREET
GLENVIEW, IL 60025
1-708-486-8019

Dear VE:

We hope that you and your VE testing group would consider conducting
your test sessions using the Great Lakes VEC testing system. Great
Lakes is among seven active VECs testing throughout the country.
Following are several reasons why you and your group would benefit
from using the Great Lakes VEC Testing System.

LESS PAPER WORK
We at the Great Lakes VEC office do all the difficult paper work. The
main responsibility of the VE is to administer the examination and
make sure that the applicant's Form 610 is filled out properly.

HELP WHEN YOU NEED IT:
You may have found that Other VECs are too large to give their VE
teams the individual support that may be required in a given
situation. That should never happen with us.
Great Lakes VEC also has an 800 number to better serve you: 1-800-473-
9703

Expense Reimbursement:
The Great Lakes VEC offers Two types of reimbursement polices.
Direct reimbursement:
The VE team leader is allowed to keep $2.00 for each paid applicant.
If this system is used the VE is responsible for all out of pocket
expenses.
Indirect reimbursement:
All VE expenses are paid for by Great Lakes VEC.

COMMUNICATIONS:
We have a 24-Hour 800 number for you to communicate with us.
If I am not available the answer machine is always on line.
The 800 number is a dedicated line for the VEC program.

We have a FAX line available which can be used to send copies of VE applications and licenses.

The FCC will accept a FAX for a license copy.
We will be happy to answer any questions which you may have with respect to our program.

Sincerely,

Jim Georgias W9JUG

>Has anyone done any real tests on HT's to see if any are more
>sensitive to intermod than others?

Well not scientific but my FT530 does get lots of intermod in downtown Mminneapolis and even some around my home area of Rochester,MN. The radio shcack that I used to have did not but I don't care. The features of the 530 make it so much more useful that I can put up with it. It will never clear up since if you make it narrow band you can't receive the wide stuff and so they will always be worse. It would be possible to improve but the cost would be astronomical.

>What about the Yaesu FT-530. Whould that be a comparable rig? Better? or
>Worse? Has anyone used the FT-530. Can it be modified? Does the rx range
>go below 130 MHz.

I have a 530 and it does receive the aircraft band. There are to things to think about though. The sensitivity in the aircraft band is abysmal and it does require a mod to do that. If you can't unsolder a pad that is only a little bigger than a period on a line of text then be prepared to pay over 100 dollars (they were charging 160 for all dual bands at the recent hamfest in Minneapolis) to have it done for you. That is a rip off and I beleive that Yaesu should be soundly ripped for not shipping the radio with at least the wide band recieve enabled. The advertising is EXTREMELY misleading on that.

SB SAT @ AMSAT $ANS-310.01
DOVE-OSCAR-17 RETURNS TO 2M!

HR AMSAT NEWS SERVICE BULLETIN 310.01 FROM AMSAT HQ
SILVER SPRING, MD NOVEMBER 6, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-310.01

DOVE-OSCAR-17 (DO-17) Returns To 2M: DOVE RECOVERY BEGINS!

DOVE is currently up and running on 2M. It is sending normal ASCII tele-
metry and a short text bulletins on 145.825 MHz. A very quick look at
telemetry indicates the spacecraft is basically healthy. The DOVE Recovery
Team of Bob Diersing (N5HAD), Bill McCaa (K0RZ), and Jim White (WD0E) have
been working very intensively for about 10 days to create and test new
software that allowed automated software loading via 2M in a half-duplex
mode. This replaces the "ear-ack on S-Band" method N4HY had used in the
past that was so difficult as to be a barrier to recovery.

WD0E and the DOVE Recovery Team would like to receive telemetry reports.
Please send them to vk7zbx@KO-23, @AO-16 or on INTERNET to vk7zbx@amsat.org
or to wd0e@amsat.org, or to the CompuServe address of 71477,546. The most
recent version of TLMDCII (3-8-92) will decode and record DOVE telemetry
very nicely. For more information about obtaining a copy of the TLMDC
program, contact AMSAT-NA HQs at (301) 589-6062. After the DOVE Recovery
Team is sure the satellite is stable in this configuration and the RF
transmitter power targets are established, the next step will be to load up
through PHTX and test the voice module. Depending on the condition of the
spacecraft and other issues, this could take several weeks.

WD0E would like to express sincere thanks to Bob Diersing for all of his
hard work creating a RAM loader, and Bill McCaa for the many passes of S-
band and two meter receive he provided (often late into the night). It
could not have been done without their enthusiastic efforts. Also, thanks
to Harold Price (NK6K) for providing the the developement system hardware,
software, and a good deal of coaching. His contributions were invaluable.

Given a reasonably healthy satellite, WD0E is confident we can make DOVE
talk as he described at the AMSAT-NA Space Symposium in Dallas a few weeks
ago.

[The AMSAT News Service (ANS) would like to thank Jim White (WD0E) for this
bulletin item. If you would like to send DOVE telemetry to Jim, again, his
INTERNET address is wd0e@amsat.org and his CompuServe address is 71477,546.]

ITAMSAT-OSCAR-26 STATUS REPORT

HR AMSAT NEWS SERVICE BULLETIN 310.02 FROM AMSAT HQ
SILVER SPRING, MD NOVEMBER 6, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-310.02

IW3QOK Provides An Update On ITAMSAT-OSCAR-26 (IO-26)

First of all IW3QOK wants to apologize to all those who have sent their status reports and telemetry data about IO-26 satellite to him without having had any response come back from him. IW3QOK reports that he has not enough time to read all the messages to answer each individually, nor to follow the all the discussions concerning IO-26. For those who have sent in these telemetry and status reprots to IW3QOK, he notes that he has found them to be quite invaluable and they contribute greatly to making IO-26 an even more interesting and useful satellite from the user's point of view.

The telemetry data received so far shows that all systems are working properly and that IO-26 is presently in a good health. The Bulletin Board System (BBS) has been opened, as the most of you already know, and the number of users of IO-26 is growing rapidly as each day passes.

It is well known that IO-26 is presently in a state of low power consumption, and consequently the RF power output from the transmitter is about 250 mW. This is NOT a problem, but has been implemented because of battery considerations and also because its signal is already very good and quite readable. Two days ago an Italian command station, in Milano, increased the RF output power of the 70cm transmiter to its maximum value (approx. 4W) as a test for a few minutes. Everything worked fine during this test. The Battery Charge Regualator (BCR) is working well and the solar panels are charging the batteries regularly. Recently IW3QOK received some questions about why the array voltage was so low (around 11V) with respect to the other MICROSATs. The answer is very simple: IO-26 uses highly efficient solar array panels that have a lower voltage than those used on the other MICROSATs so it is not necessary for you to worry about this issue. Another question which IW3QOK receives many inquiries about is the very high value presented by the Error Detection And Correction (EDAC) telemetry counter. His theory is that there must be a little "bug" in the telemetry sofware and ITAMSAT's main working group (in Milano) is already working to solve this problem.

From all the very interesting telemetry data IW3QOK has received from many countries, it has been possible to understand that the IO-26's spacecraft attitude and to see that its motion is quite predictable. The results will be presented soon in a readable form. All IO-26 users are invited to download the Whole Orbit Data (WOD) and analyze it. The downloading of this WOD file is simple and one can easily deduce the spacecraft's motion by examining carefully the telemetry items related to the solar array currents or voltages using any common spreadsheet program, such as, Excel, Lotus 123, or QuattroPro. By graphing these telemetry items, one can easily see how

these currents or voltages behave as the spacecraft attitude rotates as goes into and out of eclipses.

Again IW3QOK would like thank all those who have sent him telemetry and it is his hope that you will continue to enjoy using IO-26.

[The AMSAT News Service (ANS) would like to thank IW3QOK for this bulletin item.]

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink on a Mode-B downlink frequency 145.960 MHz.

/EX
SB SAT @ AMSAT $ANS-310.04
WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 310.04 FROM AMSAT HQ
SILVER SPRING, MD NOVEMBER 6, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-310.04

Weekly OSCAR Status Reports: 06-NOV-93

AO-13: Current Transponder Operating Schedule:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Oct 25-Nov 15
Mode-B : MA 0 to MA 130 !
Mode-BS : MA 130 to MA 180 !
Mode-S : MA 180 to MA 205 !<- S transponder; B trsp. is OFF
Mode-S : MA 205 to MA 210 !<- S beacon only
Mode-BS : MA 210 to MA 226 ! Blon/Blat 210/0
Omnis : MA 240 to MA 80 ! Move to attitude 240/0, Nov 15
Please don't uplink to Mode-B between MA 180-205 as this interferes with Mode-S transponder operations. Continuous up-to-date information about AO-13 operations is always available on the beacons at 145.812 MHz and 2400.646 MHz in CW, RTTY and 400 bps PSK. Also, these bulletins are also posted to INTERNET, ANS bulletins, Packet, PACSATs, as well as many international newsletters. In additional notes about AO-13, G3RUH reports the following: the partial solar eclipse of 13-NOV-93 [Sat] (visible from Antarctica) also affects AO-13. AO-13 will see the Moon eclipse the Sun from 13:33 - 15:13 UTC with a maximum of 89% obscuration at 14:16 UTC. This will be Orbit 4148, with MA 171-208. The encounter will be "visible" on the spacecraft telemetry to stations in the entire Pacific area, Australia and Japan, and the US west coast. US stations east of Salt Lake City will have LOS during the encounter, seeing less the further east they are. AO-13 is not in view of Europe at this time. It will not be necessary to shut down the transponders on this occasion because Mode-S is ON, and consumes little power. The 145 MHz telemetry beacon will be available up to MA 205 and will continue on S-band. The Whole Orbit Data (WOD) collection facility will dwell on battery voltage at 1 MA intervals. On the issue of Solar Eclipses by the sun: these commence on 07-DEC-1993 [Tue] and continue until 24-DEC-93 [Fri]. These eclipses are of course total. The maximum lasts 136 minutes, and is the longest AO-13 has ever experienced. The Mode-B transponder will be OFF from MA 95 to 180 during this two week period. The WOD collection facility will dwell on interesting sensor points. Anybody requiring a specific value to be monitored should contact a command station with details of parameter wanted, start time, and MA interval. Up to 384 samples can be taken per K-block. [G3RUH/DB2OS/VK5AGR]

DOVE: DO-17 currently sending AX.25 packet telemetry on a downlink frequency of 145.825 MHz. [WD0HHU]

AO-16: Operating normally. [WH6I]

UO-22: Operating normally. [WH6I]

LO-19: Operating normally. [WH6I]

KO-23: Up and running. Busy as usual. [WH6I]

KO-25: File system is up but not open for uploads. It appears that the satellite has taken an EIS image but it is not available. [WH6I]

AO-27: No information received but it is assumed that this spacecraft is still in the testing phase. ANS will present further information when received. [W3XO]

IO-26: Up and running with a lot of activity. The signal is weaker than AO-16 or LO-19 but good throughput is still possible. The following table is just a "quick-review" of the IO-26 frequencies: TXA PSK= 435.867 MHz, TXB PSK/FM=435.827 MHz, RX #1=145.875 MHz, RX #2= 145.900 MHz, RX #3=145.925 MHz, RX #4=145.950 MHz. [IK2OVV]

FO-20: The following is the transponder operating schedule for the month of November and December:
ANALOG Mode-J Voice & CW Operations:
10-NOV-93 09:23 -TO- 11-NOV-93 07:51 UTC
17-NOV-93 07:44 -TO- 18-NOV-93 08:15 UTC
24-NOV-93 08:20 -TO- 25-NOV-93 08:38 UTC
01-DEC-93 08:43 -TO- 08-DEC-93 07:16 UTC
15-DEC-93 07:41 -TO- 22-DEC-93 08:05 UTC
Please note that that at all other times FO-20 will be in the digital BBS mode. In December, the analog transponder and digital transponder will each be turned-on for a week period, ALTERNATELY! For those who want to try working FO-20 in the voice mode the following are the passband frequencies of the analog transponder: Uplink passband: 145.900 MHz --> 146.000 MHz. Downlink passband: 435.900 MHz --> 435.800 MHz. The telemetry beacon can be heard at 435.795 MHz. The analog transponder inverts all up-linked signals. LSB on the uplink becomes USB on the downlink. A signal in the lower portion of the uplink passband appears in the upper portion of the downlink passband. For more information, see the September QST, p 104. [JJ1WTK/3]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

3958. Re: MACINTOSH, HAM,

Or... feel free to e-mail direct and I'll forward you my latest version
that I am working on.

I am updating the list mentioned by Scott... and will have the latest
version out to the net real soon. I am only posting the list to the net
when there are significant changes. There are a couple of new entries
this month... stay tuned.

SB SAREX @ AMSAT $STS-58.031
SAREX Keps & Update 10/30

Saturday 10/30/93 @ 00:00 UTC

Since all scheduled SAREX activities are now complete, several general
QSO opportunities are available. While the SAREX Working Group cannot
fully guarantee that the crew will be operating, there is a high
probability that the STS-58 astronauts will be ready to take general calls
over the continental U.S. on these passes. These opportunities include a
pass on orbit 192 at MET 11 days 22 hours and 29 minutes (10/30 at 13:22 UTC)
and a pass on orbit 193 at MET 12 days 0 hours 6 minutes (10/30 at 14:49 UTC).
Please note that many hams on the ground heard or worked the Shuttle Columbia
crew on several orbits today. Both voice and packet modes were operating.

Element set GSFC-031, generated by Ron Parise, WA4SIR, will continue to be
the official SAREX element set for today. On orbit 181 Gil Carman, WA5NOM,
of the Johnson Space Center compared the orbiter state vector to GSFC-031.
The state vector was 6 seconds later than this element set. Other later
element sets (e.g. GSFC-038) are currently less accurate than GSFC-031.

STS-58
1 22869U 93065A 93300.17699070 0.00133671 99048-5 24183-3 0 318
2 22869 39.0252 71.9896 0012817 34.2105 325.9529 16.00500857 1383

Satellite: STS-58
Catalog number: 22869
Epoch time: 93300.17699070 (27 OCT 93 04:14:51.** UTC)
Element set: GSFC-031
Inclination: 39.0252 deg
RA of node: 71.9896 deg Space Shuttle Flight STS-58
Eccentricity: 0.0012817 Keplerian Elements
Arg of perigee: 34.2105 deg
Mean anomaly: 325.9529 deg
Mean motion: 16.00500857 rev/day Semi-major Axis: 6651.1630 Km
Decay rate: 0.13E-02 rev/day*2 Apogee Alt: 281.30 Km
Epoch rev: 138 Perigee Alt: 264.25 Km

NOTE - This element set is based on NORAD element set # 031.
The spacecraft has been propagated to the next ascending
node, and the orbit number has been adjusted to bring it

into agreement with the NASA numbering convention.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

********** STS-58 STATE VECTOR**********

FLIGHT DAY 5 STATE VECTORS
ON ORBIT OPERATIONS
(Posted 10/22/93 by Roger Simpson)

The following vector for the flight of STS-58 is provided by NASA Johnson
Space Center, Flight Design and Dynamics Division for use in ground track
plotting programs. The vector represents the trajectory of Columbia
during on orbit operations.

Lift off Time : 1993/291/14:53:09.974
Lift off Date : 10/18/93

Vector Time (GMT) : 295/14:00:00.00
Vector Time (MET) : 003/23:06:50.030
Orbit Count : 64
Weight : 242925.0 LBS
Drag Coefficient : 2.00
Drag Area : 3000.0 SQ FT

M50 Elements Keplerian Elements
---------- ----------
X = -2637440.4 FT A = 3600.1079 NM
Y = -20942782.5 FT E = 0.001033
Z = 5675641.8 FT I (M50) = 39.27150 DEG
Xdot = 19697.390013 FT/S Wp (M50) = 113.55002 DEG
Ydot = -6469.479637 FT/S RAAN (M50) = 102.02088 DEG
Zdot = -14650.898454 FT/S / N (True) = 42.23202 DEG
Anomalies \ M (Mean) = 42.15251 DEG

Ha = 155.421 NM
Hp = 150.294 NM

Mean of 1950 (M50) : Inertial, right-handed Cartesian system whose
Coordinate System origin is the center of the earth. The epoch
is the beginning of the Besselian year 1950.
X axis: Mean vernal equinox of epoch

Z axis: Earth's mean rotational axis of epoch
Y axis: Completes right-hand system
A: Semi-major axis
E: Eccentricity N: True anomaly
I: Inclination M: Mean anomaly
Wp: Argument of perigee Ha: Height of apogee
RAAN: Right ascension of ascending node Hp: Height of perigee

Columbia will perform a 14 fps retrograde orbit adjust maneuver at 5/06:50 MET. The next state vector update will be performed after this maneuver has been completed.

There was a left-right switch on a late 1960's police radar gun so that the speed display could be read in the rear view mirror if the gun was mounted in the back window. I remeber it had Numitron displays.

Anyone know what happened to the orbital elements that usually
come out on Friday nights? Or were they somehow affected by
all those repeat messages about SAREX?

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.announce.newusers
newsgroup before posting any articles. If you are an experienced user, please
help by refraining from answering frequently-asked questions on the newsgroup
if they are already answered by the FAQ articles. Instead, send e-mail to the
user who asked the question. (It will be helpful if you include the part of
the FAQ that answers their question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents
-----------------
Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
```

** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@uts.amdahl.com (Santa Clara, CA, USA)
Michael Larish KD6CTZ nomad@ecst.csuchico.edu (Chico, CA, USA)
Paul Schleck KD3FU pschleck@unomaha.edu (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana

established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.
* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civ-

ilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail

from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).

* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any kind over ham radio. Interference to other hams or services, as well as obscene, profane or indecent language is not tolerated and is illegal. Music and broadcasting are not allowed on ham radio. Some personal conversations may not be appropriate to Amateur Radio. Do you really want the whole world to hear about Aunt Mabel's hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers) in your local area. Look around and ask local hams. Search out local radio clubs. As well, some people have volunteered to be an Elmer over the Usenet. A list of UseNet Elmers and their e-mail addresses is posted to the newsgroup monthly. If anyone wants to be an Elmer, send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a look around the FTP archives and e-mail servers listed in Part 2. There's so much out there on UseNet, you'll find plenty of things you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a thrill to build your own transmitter and put it on the air. However, building your own receiver can be quite complicated; if you don't have electronics experience, you may want to buy a receiver instead. Most homebrew transmitters are QRP (transmit very low power). That's fine for an experienced ham with a very good antenna, but a Novice ham will just get frustrated. Your first rig, therefore should NOT be a home-brew.

Antennas can be much simpler projects than the transceiver, though some types are also quite involved. Most hams build their own antennas for base station use and buy antennas for mobile (car) use. Most beginner ham books describe how to build different types of antennas. Order of difficulty, from easiest to more difficult, for some common

antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books from many sources, including ARRL and several Hams, discuss antennas in depth.

When building or even understanding antennas, it is good to know the relationship between the antenna element length and the frequency or wavelength it is designed for. An antenna performs best at multiples of 1/4 of that wavelength, though 5/8 wave also has beneficial qualities. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
--------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.announce.newusers
newsgroup before posting any articles. If you are an experienced user, please
help by refraining from answering frequently-asked questions on the newsgroup
if they are already answered by the FAQ articles. Instead, send e-mail to the
user who asked the question. (It will be helpful if you include the part of
the FAQ that answers their question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents
-----------------
Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
```

** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@uts.amdahl.com (Santa Clara, CA, USA)
Michael Larish KD6CTZ nomad@ecst.csuchico.edu (Chico, CA, USA)
Paul Schleck KD3FU pschleck@unomaha.edu (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana

established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.
* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civ-

ilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail

from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).

* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any kind over ham radio. Interference to other hams or services, as well as obscene, profane or indecent language is not tolerated and is illegal. Music and broadcasting are not allowed on ham radio. Some personal conversations may not be appropriate to Amateur Radio. Do you really want the whole world to hear about Aunt Mabel's hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers) in your local area. Look around and ask local hams. Search out local radio clubs. As well, some people have volunteered to be an Elmer over the Usenet. A list of UseNet Elmers and their e-mail addresses is posted to the newsgroup monthly. If anyone wants to be an Elmer, send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a look around the FTP archives and e-mail servers listed in Part 2. There's so much out there on UseNet, you'll find plenty of things you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a thrill to build your own transmitter and put it on the air. However, building your own receiver can be quite complicated; if you don't have electronics experience, you may want to buy a receiver instead. Most homebrew transmitters are QRP (transmit very low power). That's fine for an experienced ham with a very good antenna, but a Novice ham will just get frustrated. Your first rig, therefore should NOT be a home-brew.

Antennas can be much simpler projects than the transceiver, though some types are also quite involved. Most hams build their own antennas for base station use and buy antennas for mobile (car) use. Most beginner ham books describe how to build different types of antennas. Order of difficulty, from easiest to more difficult, for some common

antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books from many sources, including ARRL and several Hams, discuss antennas in depth.

When building or even understanding antennas, it is good to know the relationship between the antenna element length and the frequency or wavelength it is designed for. An antenna performs best at multiples of 1/4 of that wavelength, though 5/8 wave also has beneficial qualities. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

3967. rec.radio.amateur.misc Frequently Asked Questions (Part 1 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-07 22:19:59 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
--------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.announce.newusers
newsgroup before posting any articles. If you are an experienced user, please
help by refraining from answering frequently-asked questions on the newsgroup
if they are already answered by the FAQ articles. Instead, send e-mail to the
user who asked the question. (It will be helpful if you include the part of
the FAQ that answers their question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail

from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).

* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any kind over ham radio. Interference to other hams or services, as well as obscene, profane or indecent language is not tolerated and is illegal. Music and broadcasting are not allowed on ham radio. Some personal conversations may not be appropriate to Amateur Radio. Do you really want the whole world to hear about Aunt Mabel's hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers) in your local area. Look around and ask local hams. Search out local radio clubs. As well, some people have volunteered to be an Elmer over the Usenet. A list of UseNet Elmers and their e-mail addresses is posted to the newsgroup monthly. If anyone wants to be an Elmer, send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a look around the FTP archives and e-mail servers listed in Part 2. There's so much out there on UseNet, you'll find plenty of things you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a thrill to build your own transmitter and put it on the air. However, building your own receiver can be quite complicated; if you don't have electronics experience, you may want to buy a receiver instead. Most homebrew transmitters are QRP (transmit very low power). That's fine for an experienced ham with a very good antenna, but a Novice ham will just get frustrated. Your first rig, therefore should NOT be a home-brew.

Antennas can be much simpler projects than the transceiver, though some types are also quite involved. Most hams build their own antennas for base station use and buy antennas for mobile (car) use. Most beginner ham books describe how to build different types of antennas. Order of difficulty, from easiest to more difficult, for some common

antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books from many sources, including ARRL and several Hams, discuss antennas in depth.

When building or even understanding antennas, it is good to know the relationship between the antenna element length and the frequency or wavelength it is designed for. An antenna performs best at multiples of 1/4 of that wavelength, though 5/8 wave also has beneficial qualities. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

3968. rec.radio.amateur.misc Frequently Asked Questions (Part 2 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-07 22:20:01 UTC
From: ikluft@kluft.com
Message-ID: <ham-radio-faq-2-752710797@kluft.com>

Revision: 3.1 1993/11/07 21:28:33

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media
including UseNet, electronic mail, the Internet, dialup bulletin board
systems (BBS) and others. Various electronic information sources are
```

summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There are several newsgroups dealing with Amateur Radio and other aspects of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*). It is also cross-posted to rec.answers (the archive for FAQs in the rec.* newsgroups) and to news.answers (UseNet's general repository for FAQs.) These should be the first places to look for new current copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting Amateur Radio in the USA. They have established an automated file server which responds to information requests via electronic mail.

To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 386 PC at home with
over 40 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at ham-server@grafex.cupertino.ca.us. This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server seems to have more emphasis
on MS-DOS programs and binary files though there are many plain-text
articles as well.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)
NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Tom Czarnik coordinates a fairly definitive list of anonymous FTP
sites, their IP numbers, time zones, general contents, and access
policies which he posts to the comp.misc, comp.sources.wanted,
alt.sources.wanted, and news.answers newsgroups. It is itself
available via anonymous FTP (how about that?? :-) from (among other
places) rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has

installed the "archie" program on your machine and use it. Archie may also be accessed by telnetting to one of the following sites (use the one closest to you):

Finland/Europe: archie.funet.fi
Canada: archie.mcgill.ca
Australia/New Zealand: archie.au
Israel: cs.huji.ac.il
UK/Ireland: raquel.doc.ic.ac.uk
USA (Maryland): archie.sura.net
USA (Nebraska): archie.unl.edu
USA (New York): archie.ans.net
USA (New Jersey): archie.rutgers.edu

Login is archie. Type "help" at the prompt for a description of all server commands.

For those without telnet capability, the database may be accessed non-interactively via mail server. Send E-mail with the word "help" to archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are extremely powerful tools for finding out "what's out there" at various FTP sites around the world. *PLEASE* exhaust their capabilities before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu
(submissions to this ftp site should be made to bowen@cs.buffalo.edu) - contains many ham radio files, including the FAQs, Elmer list, SWL and scanner info, Packet FAQ, examination opportunities, information on various regulations, information on commercial radios (i.e. GE or Motorola), SSTV (slow-scan TV), HTs (handheld transceivers) and the KA2UGQ worldwide BBS list. See ~pub/ham-radio. This FAQ is updated monthly here.
grivel.une.edu.au
This site contains a mirror of ftp.cs.buffalo.edu's Ham Radio archives. It provides a shorter distance if you're in Australia or if Australia is a shorter net.path for you than New York.
nic.funet.fi
This is one of the largest FTP sites in Europe and maybe the most popular. There are many directories of Ham-related files in /pub/ham. /pub/ham/info contains a mirror of Buffalo. Other topics available here include amiga, antenna, HF, packet, satellite, scanners, program sources, VHF and others.
ftp.uu.net
A large FTP site in the USA - UUNET contains sources and binaries for many different types of computers.

wsmr-simtel20.army.mil
Keith Peterson, W8SDZ, has apparently returned as the
maintainer of this huge repository of ham-radio (software and
modifications), MS-DOS, and CP/M files. To find out how
to submit files to this archive, please read his informational
posts to the comp.binaries.ibm.pc.archives newsgroup. If you
cannot directly FTP from wsmr-simtel20, there is a mail server
that can help. Send mail with the text "help" to
listserv@vm.ecs.rpi.edu.
wuarchive.wustl.edu
A "mirror" of the files available on Simtel20, plus a *LOT*
more. A more user-friendly Unix environment (plus a faster
net connection) makes this site preferred over Simtel20.
If you are on a Unix box locally, see if your system
administrator will "NFS-mount" these files for faster/easier
access.
ucsd.edu
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
uxc.cso.uiuc.edu
cd pub/ham-radio - This site contains the HyperCard Hamstacks
written by Diana Carlson as well as ASCII readable ham radio
question pools.
ftp.apple.com
cd pub/ham-radio - Ham software and information, especially
Macintosh software
wolfen.cc.uow.edu.au
athene.uni-paderborn.de
ham radio files and software for the Amiga computer system
rtfm.mit.edu
cd pub/usenet/news.answers - all participating FAQs and
periodic informational postings are archived here, including
those from the rec.radio.* newsgroups which can be found in
pub/usenet/news.answers/radio. Participating FAQs are
automatically archived here when they are posted on UseNet.
ftp.amdahl.com
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here
is that Netnews is far more prevalent than direct Internet hookups,
accurate name servers, smart mailers and routers, and of course,
telnet and FTP client services. What this means is that your trouble
may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet
and thus cannot use real-time interactive services like FTP and
telnet.
* If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type "ftp" or
"telnet" at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes not running Unix, do not support these
services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar
error, try telnetting via the IP number, a set of four 1-3-digit
numbers separated by periods (eg, 198.137.220.1). The exact IP
number for the site can be obtained via the nslookup utility, if
your computer supports it. (The FAQ does not print IP addresses any
more because they change so often.) Your system may not recognize
the "fully-qualified domain name" (like callsign.cs.buffalo.edu),
but it should ALWAYS recognize an IP number if their network is
reachable from yours.
* If you get "network unreachable" check with some more knowledgeable
users if your site is actually connected to the Internet. If it is,
a link in the network may be temporarily disconnected for maintenance
(or by accident.)
* In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet <host> <port#> doesn't work,
but you can telnet to the default login port (ie, no qualifiers),
then the manner at which the port qualifier is entered may be
system dependent.
* Syntax for telnetting from different operating systems differ.
Some common command syntaxes are: (angle brackets are for
readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files

foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect uxc.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/Tech.v3.3.sit.hqx.Z

quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word
"subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command
words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to
the mail list addresses at ucsd.edu. Since rec.radio.info is a
moderated newsgroup, requests to post to it may be sent to Radio-Info
but they will be mailed to the moderator,
rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu
under subdirectory mailarchives/{mail-list-name}. However, Radio-Info
is not archived at UCSD because almost everything is either on one of
the other lists or in the news.answers archives at rtfm.mit.edu.

To subscribe to rec.radio.shortwave, send email to
listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP,
login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings
are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of
other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder.
The number is 203-666-0578. More information can be obtained from
the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on
the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB
HAM-server. Also see many of the FTP sites listed earlier in this
section. There is now way to keep a list like this anywhere near
up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
If you are at an Internet site you can connect using telnet to the
following callbook server:
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

The callbook server sits on port number 2000 and the geographical
name server sits on port 3000. These are different port numbers
than what telnet usually defaults to. So if you just telnet to these
machines, you will get a login prompt instead of the server. How you
tell your telnet program to connect to port 2000 or 3000 instead of
the default port is operating system dependent but it is usually done
with a line like

telnet callsign.cs.Buffalo.EDU 2000

If this doesn't work, check the telnet/FTP troubleshooting hints
above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory
and they support fairly detailed help facilities. The first command
you should execute when connecting to one of these servers is "info".

This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:

```
help
lookup kc1sp wn4bbj
lookup n0fzd
quit
```

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns, separated by spaces. For Canadian calls, use the callserver at REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an OS interface to the MBL packet BBS using the Buckmaster CD-ROM callsign database.

The REQQTH address is for the AX.25 radio-linked amateur packet network, *NOT* the Internet. If you attempt to send Internet mail to this address, and use the old .NA suffix instead of the new .NOAM suffix, it will get routed to Nimibia (Internet suffix .na) which is currently paying a lot of money for misdirected ham mail. Help maintain a positive example for amateur radio and please do not attempt this!

The FCC "call sign hotline" at 717-337-1212 is available for those who wish to listen to the call signs allocated in each group for each district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
Since the latest changes to it, there are no known FTP sites with
a current copy.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
Some mods can be found on wsmr-simtel20.army.mil or
the Simtel20 mirror directories on wuarchive.wustl.edu.

There is a new server at pcserver@novell.business.uwo.ca. Some
examples of main body email requests are as follows:
HELP
SENDME RADIO MODS
SENDME TH215 MODS
SENDME ALLBAND MODS

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is sometimes a frequent question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are
available from the ARRL e-mail file server (see above). They want
direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones
(this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and

contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY
11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449,
FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet
70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655.
Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815,
(800) 365-SUBS - lots of special interest columns, like QRP,
ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 -
up-to-date information on Amateur Radio happenings, including
VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In
general, you send a bundle of foreign (not States!) QSL cards to
the outgoing bureau in Newington, Connecticut, along with a label
off of your QST magazine (which shows ARRL membership), along with
$2 per pound of cards (approximately 150 cards) or $1 for 10 cards
or less.

To use the incoming QSL bureau, you do NOT have to be a member of
ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7
or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached
and with your callsign in 3/4" letters in top left hand corner where
the return address label would go. If you expect a large quantity
of foreign QSL cards, attach extra money or postage with a paper
clip; do NOT affix extra postage to envelope. Send the envelopes to
the QSL bureau for your callsign area. If your callsign is xx3xxx/5,
you would send it to the 3rd call area, NOT the 5th call area.
Addresses for QSL bureaus are listed in QST and on the ARRL e-mail
server (see below); if you don't have access to a QST magazine, ask
another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL
bureau, not considering foreign QSL bureaus, is about 3 months.
Foreign QSL bureaus and hams can be as fast as 2 months or as slow as
TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available
from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT".
See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,
rec.aviation.misc is appropriate for CAP aviation discussions and for
CAP radio information, these rec.radio.amateur.* groups are available.
CAP-related files are also stored on the FTP site
sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,

10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N3FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020

Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it thru 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the

beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the

following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restrictions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

In one example of someone's effort to bridge the information gap, there is a new repeater-mapping project which can automatically accept entries via e-mail. If you can get enough details about a repeater for a complete listing, you may want to help by submitting an entry. For more information, use the following e-mail addresses:

repeaters@wattres.sj.ca.us
Just send a message with only the word "help" in the message body. The project's software will reply with instructions.
steve@wattres.sj.ca.us
For other questions (Steve Watt KD6GGD)

As soon as the list is big enough to be useful, the project will make it available electronically. That will mean one less "why isn't it available electronically" question for the net.

3969. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).

Required are 5 wpm Morse code test and 30-question Novice test.
Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and

does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife
YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a

reference to the wavelength of a common Amateur frequency
band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to
hear. It's used as a "PL Tone." PL is "Private Line", a trademark
of Motorola for their implementation of CTCSS (Continuous Tone Coded
Squelch System). Basically, the transmitter sends the signal with
the Sub-Audible tone and the receiver only opens when it hears signals
with that tone. Signals without the proper tone are ignored. This
is useful for "closed" repeaters, or for repeaters on the same
frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone
Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS
probably means Dual Tone Squelch System and refers to the feature of
providing a predefined sequence of Touch Tone digits to open the
repeater for transmit. DTSS is an alternate method from CTCSS, which
provides a way to use a "closed" repeater even if your radio doesn't
do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to
your country. See the country-specific newsgroups in "the rec.radio.*
newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get
a license in your country. See also the ARRL e-mail server. (Details
are in Part 2.)

If you know of any location where this information is available
electronically, whether by an e-mail server, anonymous FTP, or a
contact person, please mail it to us so we can include it here. Send
it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)?
Editor's note (11/92): the regulations affecting this question are
being changed. Contact your local Volunteer Examiner (VE) and ask
about a VE 60-day pass. More details will be included in future
revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020,
Gettysburg, PA 17326. They will then send you a reciprocal permit
for alien amateur licensee (FCC Form 610-AL). You must be a citizen
of a country with which the United States has arrangements to grant
reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines apply:
* A reciprocal license is required in all foreign countries (that have a reciprocal operating agreement with the US), except Canada, where the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them which country you are going to visit and they will send you the info and an application form. Foreign hams can likewise request information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur license (ie, notarized copy), and fee if applicable (use a bank draft of a bank that does business in that country) to the appropriate licensing administration of the foreign country. Processing may take 30 to 90 days.
* If less than one month, you could try sending the application and pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment into their country without a license or permit. If you applied, but haven't received the permit yet, show the copy and your FCC license to the customs officer, however, the equipment may still be held at customs until your departure.
* Be sure to use only those frequencies covered by your FCC license which are also used in the foreign country, unless otherwise authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many books offer advice for the growing group of hams that cannot put up antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up something as long as it "is invisible" or "doesn't disturb your neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief via PRB-1. Meet with the local government and seek an informal compromise. It is possible to win in court...but it's expensive and time consuming.
* If you are restricted by "covenants" attached to the deed of your home, your options are severely limited. Covenants are considered to be private, voluntary contracts between individuals and are outside of the intended application of PRB-1. In many cases, you can petition the Homeowner's Association for an exception. Sometimes you can win in court on the basis that other violations of the covenants by others without action taken constitutes abandonment of the agreement.

* For further information, contact the General Consel's office of the ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a complete list. There are also books on the subject available from ARRL.
* If cable TV is an underground feed, look for central distribution box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is disconnected and you use rabbit ears instead. It could be the cable company's problem!
* Calling the cable company may get results, since they are also responsible for RF leakage from their equipment. However, they are very often obstinate. Good luck! Try some or all of these suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency, and characteristics.
2. Bring it to the cable company's attention in writing, preferably addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving the problem. Try to work it out with someone technically knowledgeable.
4. Do mention your "licensed radio system", but try not to be too specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various aspects of electromagnetic interference. The filenames start with "EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI), EMI-AUDIO (interference to audio devices), etc.

** Did you know that you can get college credit for being a ham?
It's true! You can receive up to 14 credits in electronics and engineering thru placement tests for CLEP (College Level Entrance Placement) exams and DANTES (Defense Activity for Non-Traditional Educational Support) exams if you have an Advanced or Extra class Amateur license. For more information, ask your campus education office or (for DANTES) your military education office.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840

W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)
KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you

check the box to change your callsign, YOU WILL GET A NEW CALLSIGN, even if all you wanted was to supply a new address; if you want to keep your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur

Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW

and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

3971. Kenwood TM-742 remote control?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-07 23:53:30 UTC
From: molson@bml4380.cpg.cdc.com
Message-ID: <CG5Bp6.C7y@cdsmail.cdc.com>
Source record: 274592

I have been told that the Kenwood TM-742 can be used for remote control operations. However, the manual that I have for mine only details the remote control that is accessed by the DTMF microphone. Is there a way to enable remote control from a remote transciever? I've looked at the "mod" BBS's that I know about but information on the 742 is scarce. I have a feeling that there is an undocumented function sequence that enables this, but I have been unable so far to find it. Anyone have information about this?

Thanks in advance!

Mark Olson AA0MH

3972. Radio Shack WeatherRadio Modification/Schematic

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 00:41:23 UTC
From: mrb1@cbnewsh.cb.att.com
Message-ID: <CG5Dx1.HqJ@cbnewsh.cb.att.com>
Source record: 274593
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.scanner,alt.radio.scanner

Hi ---

The library where my wife works went out and bought a Radio Shack WeatherRadio Alert, Model 12-140 to let them know when there will be bad weather, etc. Unfortunately, the person purchasing it did not get the instruction book. Well, they did manage to set it up and get it to work OK but they find the alert noise to be too unnerving (especially in a quiet place like a library). What they really need is for the darn thing to stay muted until there is an alert, and then the speaker unmutes and everyone can hear the message .... not the way it presently works where it squeals away until someone presses the WEATHER button to hear the announcement.

My first thought was to open it up and clip a lead on the little piezoelectric sounder or whatever is in there that makes the alert noise. But upon opening it up carefully, it appears as though the alert noise is summed with the receiver audio before amplification & going out the speaker. And without a schematic, I'm a bit reluctant to do much more. Plus how would you know there was an alert so you could hit the WEATHER button and hear it ?!

So here's the question(s) ---

There's a little switch on the back bottom plate marked "ALERT LOCK" --- will this make the receiver do what I want? What does it do?

-and/or-

Does anyone have a schematic who can tell me what lead to lift to kill the alert tone & make the speaker unmute instead ?

-and/or-

Can someone with a schematic advise where the alert tone audio is generated and summed in, so I can attenuate to a bearable level ?

I would appreciate any and all replies (and anyone suggesting a modification is absolved of all responsibility). E-mail preferred as I am posting to several relevant groups.

Thank you in advance,
Maurice R. Baker, WA3ZXO

A lot of RS customers got a mailing recently with (1) a coupon for a free catalog, and (2) a discount card good for 10% off the regular price of any one item each month.

3975. GAP Eagle DX-VI Problems

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 01:56:43 UTC
From: kurdzo@gdc.COM
Message-ID: <3788@esun179.gdc.com>
Source record: 274535
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

Recently I purchased a GAP Eagle DX-VI vertical HF antenna. The
10, 12, and 15 meter bands give very good SWR readings. However, I'm
having problems with 17, 20, and 40. All three bands have unacceptably
high SWR readings. On 40, the GAP seems to resonate up near the top
of the band (rather than in the middle). On 20 and 17, the SWR doesn't
seem to vary much with frequency.

I have called the guys at GAP three times now. They have given
me many suggestions, but none of them have worked. I've tried the
antenna on the ground as well as on my roof. I've tried 3 different
types (and lengths) of coax. The antenna appears to work better on
the ground, by the way. There are no large metal objects nearby.
They keep telling me "If it's assembled correctly, and nothing nearby
is coupling to it, it will work".

Has anyone else out there bought one of these and got it to work?
Does anyone know the theory behind this antenna? There is a capacitor
at the top of the antenna. The guy at GAP said this cap could be changed
to change the center of 40m coverage. Has anyone else had to do this?

Please share any of your GAP experiences (good OR bad) with me.

Thanks,

--

3976. Re: characteristic impedance

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 02:04:04 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1993Nov8.020404.9299@ke4zv.atl.ga.us>
Source record: 274598

In article <CG17IA.Hp@hpcvsnz.cv.hp.com> charlier@lsid.hp.com (Charlie Panek) writes:
>
> The impedance at the far end corresponding to minimum return loss is
>entirely a function of the electrical length of the line.

Umm, too true. When I tried it in the shop, I grabbed a random hunk
of RG-59, and the pot gave me a dip at 75 ohms. I should have tried
a different frequency, or a different cable. Your explanation shows
the error of my thinking, and Roy shows a simple resistance bridge
and variable frequency approach that *will* work.

Gary

> to hear outside the ham bands anyway! What makes you think Korean HTs
> are any better than American (where?) or Japanese HTs?

I'm not attempting to justify the purchase of the HTX-202, and neither am
I saying the HTX-202 is better or worse than any other HT. For one thing,
"better" is a qualititive measurement based primarily on personal tastes.
I'm not looking for mods to the HTX-202 either. As I've said previously,
if I wanted a to receive out of band, I'd buy a scanner -- which is exactly
what I did. While this is obviously my personal preference, I wanted an HT
that operated exclusively in the 2 meter amateur band and that had DTMF
encode and decode, CTCSS encode and decode, and that was fairly easy to
operate on the highway.

3979. Re: Radio Shack HTs

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 04:46:15 UTC
From: Greg Law <GREGL@delphi.com>
Message-ID: <931107.85575.GREGL@delphi.com>
Source record: 274601

The chart from the October 1992 issue of QST seems to confirm the specifications printed in the HTX-202 manual. For those interested, here are the printed specifications on Page 37 of the manual:

Spurious response attenuation: 80dB
Intermodulation attenuation: 70dB
Adjacent channel rejection (25KHz): 70dB
Modulation acceptance bandwidth: 8KHz
Hum and noise: 50dB

The only "misfeature" I've found with the HTX-202 is that its mic gain is way low for my quiet voice -- so low that others have to crank the volume control to hear me. On the other hand, I had the very same problem with an older Icon W2A. To get around the problem I adjusted the deviation of my HTX-202 so I can now be heard loud and clear without having to yell straight into the mic.

3980. HAM-server index file

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 05:48:53 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.752737733@GRAFex.sbay.org>
Source record: 274570
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc

Executed: Mon Nov 08 00:48:45 1993

NOTE: New email address:
HAM-server@GRAFex.sbay.org

Index of files.

NOTES: ----------

If you do not know how to use HAM-server, send email to
HAM-server@GRAFex.sbay.org. In the text, place HELP.

If you order a file and do not get it, check the index to be sure you have spelled the filename correctly. If you have ordered the file correctly, then order a new INDEX, as I may have moved the file to a different directory. The system is still expanding, and I am trying to keep it in managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it might be because your return path is incorrect. My bounce mailbox fills up quite regularly with bounce messages. And, since the path is incorrect, I cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are ignored. If you are reading this from usenet, do not respond to this post. You must send email to HAM-server@GRAFex.sbay.org.

A new INDEX is automatically generated weekly and when files are moved or added.

The archives may contain the same file under different names. If you should run across one of these, please let me know with email to
KA6ETB@GRAFex.sbay.org

3981. Re: Neat Feature on New Motorola Commercial Handheld

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 05:53:02 UTC
From: brian@nothing.ucsd.edu
Message-ID: <2bkmruINNq3m@network.ucsd.edu>
Source record: 274610

In article <jfhCFzM1F.IuM@netcom.com> jfh@netcom.com (Jack Hamilton) writes:
>When are the domestic thinkers at Motorola going to start paying attention
>to the ham market? (Taking out threatening ads in QST doesn't count.)

Probably about the time that hams start buying significant quantities of
$1200+ walkies and $2500+ mobiles.

Don't hold your breath.
- Brian

SB DX @ ALLBBS $RTDX1105
VK2SG RTTY DX Notes, 5 November
VK2SG RTTY DX Notes for week ending 5 November 1993 (BID RTDX1105)

Looking at the reports being received, indications are that the bands
are going through a change. Solar flux has been quite low and the
forecasts are giving flux below 90 for several days. As result of
this situation together with the CQWW SSB Contest of last week, we had
general poor activity on RTTY.

Our information this week came from ZS5S, 9X5LJ, W2JGR, WB2CJL,
WA1MPB, I5ICY, I5IGQ, IK1HSR, F8XT, SP5AA and NJ0M node of the Twin
Cities DX PacketCluster. Thank you all for the contribution.

Notes of Interest

WAE CONTEST. I remind you this contest sponsored by Deutscher ARC (Germany) which will take place from 1200 UTC Saturday 13 to 2400 UTC Sunday 14 November (36 hours). For details see the RTTY Journal pg 7 Sept. 93 issue.

RTTY Honor Roll. DXAC is bringing up a vote to recognize the achievement of the RTTY DXCC status with endorsements. More info next week.

CROZET, FT4. It is reported from Jean, F8XT that Christian FT4WD will be leaving this week.

Gilberto, IK1HSR informs that IK3HHX is no more QSL manager for RJ7JYZ
since April '93. Furthermore he is at disposal for those DX that need
a manager, including QSLs printing capability.

Send your bandpass and notes for next week to Bob,
WB2CJL @ W5KSI.#NOLA.LA.USA.NA or WB2CJL @ ZS5S.ZAF.AF or
WB2CJL @ I5FLN.ITA.EU.

Landline BBS open to all: (916) 262-1657
RACESBUL.299 DATE: Nov 8, l993
SUBJECT: OPS - STRIKE TEAMS - Part 1/2

Adapted from an article by Ted Benson, WA6BEJ, Deputy RACES Radio Officer/Mobile Operations, San Diego County RACES as published in TAC ONE, vol. 1, issue 2.

The Strike Team, What it is, and what it isn't.
In its simplest form, the Strike Team is a group of specialists, ready to go anywhere on short notice, and able to bring everything they need along with them. It is to provide short-term support until a given situation can be evaluated, and further resources called in. Our Strike Team is designed to operate for 72 hours without outside support. By the end of that time, the incident will either be resolved (the record is currently one hour), or further support will have been brought in. This is an important part of the Strike Team concept, and the most often misunderstood.
The resources of a Strike Team could easily be exhausted if it was called in to every incident and expected to remain until the entire incident was over. Instead, its function is to provide a bridge between the initial incident and the arrival of the larger, but slower to mobilize resources. Once further resources have arrived, the Strike Team transitions itself out of the picture - ready to respond to another call. This technique has been developed to a science by the California Department of Forestry (CDF) which fields Strike Teams all over the state. It was their example, in part, that was used to develop our Strike Team.
(Concluded in part 2)

3988. Re: Fun with Radio Shack

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 11:11:10 UTC
From: vbreault@rinhp750.gmr.com
Message-ID: <VBREAULT.93Nov8111110@rinhp750.gmr.com>
Source record: 274530

From the "For What It's Worth" department:

The recent policy change at Radio Shack to begin charging for the catalogs has caused quite a bit of resentment. I resented it when I had to pay for the catalog I use as a sales tool (I work there part-time). However, the reality is that we have been paying for the catalogs all along. The catalogs are expensive to produce and the cost of their production had been part of the cost of the products. Not only did we pay for our own catalogs, but the tens or hundreds of thousands of catalogs that were taken from the stores by folks that took them just because they were free. Junk mail and other "Free" advertising seems to have a very short persistance in most folks homes, often landing in the trash the same day it's received.

Imagine you worked for a company that published a free catalog. Imagine that 100,000 of those $3 catalogs were discarded within a week. That's $300,000 ... a third of a million dollars that is spent on providing substance for landfills. Given the recent economic climate where every expenditure is evaluated for it's return on investment would you feel that free catalogs were a valuable and cost efficient way to use your companies advertising resources?

Although it's a pretty tough policy, I think the company did the right thing, albeit an unpopular thing.

Charging for the catalogs reduces the number of catalogs that end up in landfills a week later. (Why does a boogery faced 7 year old need a free catalog and why do all his brothers and sisters need their own catalogs?)

Offering discount coupons that more than offset the price of the catalog make them an easier sale. (The people that want one and will use one will pay for the catalog, realizing that the cost will be offset with their first purchase.)

In the end, fewer catalogs are taken and those that are taken are taken by folks that will keep them on their bookshelves longer. The cost of publishing catalogs is still covered by the company through the discount coupons, but the total cost is MUCH lower.

Anyhow, that's two cents worth from someone on the other side of the counter.

3989. characteristic impedance

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 11:52:33 UTC
From: P.Lucas@mail.nerc-swindon.ac.UK
Message-ID: <9311081152.AA32868@swmis>
Source record: 274614

No-one has yet pointed out that you can 'measure' it directly! No need for anything electrical, electronic or radio.

The characteristic impedance of a line is given by the formula

Zo = 138Log (d2/d1)

where d2/d1 is the ratio of the respective diameters of the inner and outer elements of the line.
If the line has a solid center conductor, its easy! Get out your vernier callipers or micrometer, and a scientific calculator (or log-tables for oldtimers). Multi-stranded center conductors may need some extra trigonometry; measure the thickness of one strand, count the number of strands, work out the mean diameter..... or isnt this sort of thing taught in math classes these days?

And the keepers of the INFO server sure do appreciate it! Thanks.

The original poster was talking about our land-line bulletin
board. Those files are separate from the ones the Lab maintains
on INFO.

We do have a few of the files from the BBS but I have kept that
to a minimum because every time I checked the BBS files I realized
that they had been updated and we had old copies.

^^

In my expereince, this is very much true of 10M. One can tune the band
and find no, or very few, signals. Even when the band is obviously
open, one may find very few signals. As an example, I worked two different
stations on Pitcairn this last weekend and the weekend before. During
the CQ contest, lots of activity on 10M. This weekend, not many signals,
even when the band was open.

Of course, I usually listen up and down the band for signals, rarely
calling CQ. I think many folks do the same. If you think 10M is dead,
try CQ a few times. You might be surprised.

Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.equipment

To those trying to help find Plectron:

Thanks for your assistance.

I found Plectron by calling Ellen Payne, Associate Editor
of Mobile Radio Technology magazine. Plectron's new
address is:

Plectron
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-2877

They still sell monitor receivers, so I sent for product
literature. Parts and manuals for their older monitor
receivers are also available.

p.s. I do not have a manual for this amp! I'd really Really REALLY like a photocopy.

3995. BAUD vs. BAUDS

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 14:24:10 UTC
From: sbaker@umassmed.UMMED.EDU
Message-ID: <9311081424.AA07379@umassmed.UMMED.EDU>
Source record: 274625

The singular for DATA is DATUM, and in fact according to Merriam-Webster, datums is acceptable as plural.

Regarding baud here is the definition from the New Penguin Dictionary of Electronics:

"baud A unit of telegraph signalling speed equal to one unit element per second. Thus if the duration of the unit element is 1/n seconds then the speed of transmission of successive signals is n bauds."

3996. MPT/Buendelfunk in DE/Mobile Priv.Radio

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 14:51:51 UTC
From: sint@lezvax.arz.oeaw.ac.at
Message-ID: <2blme7$1a4@rani.arz.oeaw.ac.at>
Source record: 274621

I am looking for service providers of Buendlefunk systems in Germany
other than the Chekker service of Telekom.
(Buendelfunk, a kind of Mobile Private/Personal Radio is a MPT service where
several users share the same channels to do mostly halfduplex communication
of limited duration. Its a kind of trunked wireless service).
As far as I know there are
Preussag Buendlefunk, Salzgitter
Primus, Darmstadt,
Quickfunk, Villingen
Regiokom, Berlin
What are the technologies to be used? Is all of it MPT 1327/1343

Where do I get information on MPT? Is something available on the net?
But any pointer to literature or addresses is welcome.

I know the following technology providers:
AEG Mobile communications
Bosch, Mobile Communications
Surely there are others? I guess many telecom companies have a solution?

What are prices of customer equipment and service in your country?
What are the comparative (dis-)advantages of this
cordless service against PCN system like DCS1800, DECT, CT2/Telepoint.

Which service providers are there in other countries?
Does anybody know about implementations in Swizzerland?

Excuse the somewhat unordered question list.

When I bought my FT530, I negotiated the mod in with the
price and got it effectively for $10. Whoever is charging
over $100 is ripping people off. The mod is very simple;
I just had the store do it so that warranty coverage would
not be affected (the store is a Yaesu service center).

I am new to HAM radio. I passed my technician class 2 weeks ago and now I am in the market to purchase a Handheld. I have been told Yaesu FT 470 is a good buy. How much should I pay for it ? Is Kenwood better ? Does anyone have a comparison sheet (technical specs and prices). Your advice and any help to make up my mind will be appreciate. Please email me your suggestions to

kpm@hpuerca.atl.hp.com

Cheers !

4001. The first repeater on the air

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 15:34:50 UTC
From: sas@opus.xyplex.COM
Message-ID: <9311081534.AA02050@opus.xyplex.com>
Source record: 274529

A couple of weeks ago I remember a discussion about the first amateur repeater ever put on the air. Here's something to add to the discussion...

Last month, the guest speaker at our club, the Wellesley (Mass.) ARS, was Steve Rudin W1WSN. Steve gave a very interesting talk on the history of FM in amateur radio. He said that there was a FM repeater put on the air in Holyoke, Massachusetts in 1939 (yes, that's not a typo!), so perhaps that could be the first repeater. I don't remember the band or callsign used, unfortunately. Perhaps, as I did, you wonder why and how people used FM in 1939. The motivation for FM was when hams tried to use AM while mobile: the ignition noise was terrible. The AMers and mobile FMers could still talk to each other quite easily, by the way, because FM could be slope-detected on an AM receiver.

73,
Scott WO1G

>the first choice for the plural of baud and lists bauds as the second
>choice. In that respect, it is like the word, fish, where fish is the
>first choice for plural with fishes being the second choice.

Yup. And "first choice" and "second choice" don't mean one is more
correct than the other. Either is correct. Webster's Ninth
Collegiate says: pl _baud_ also _bauds_. And, on page 11 of the
dictionary, it says:

When another spelling is joined to the main entry by the word *also*,
the spelling after *also* is a secondary variant and occurs less
frequently than the first...
Secondary variants belong to standard usage and may be used according
to personal inclination.

So, use whichever form you like.

Ken Smith (ken.smith@network.ucsd.edu) writes:

>Doesn't BAUD fall into the category of words like DATA? It remains the
>same.

>Ken

Ummm ... not really. DATA is a plural already, the singular being
DATUM. According to my Concise Oxford Dictionary, there is no
distinction between the singular and plural of BAUD. There's no
such thing as "bauds" in there either.
Cheers,
Simon.

I don't think it was meant to be unfriendly. Not all DX stations are
running 30 WPM and making 3 contacts a minute. There are penty of new
hams in DX locationsthat are in the same boat as new hams here struggling
with operating procedures and code speed.

The point is you can't expect to work a Bouvet or Peter 1 dxpedition until
you have developed the skills required to do it. There will be plenty of
operators with excellent skill that miss out on a dxpedition like that.
Run with the little dogs for awhile and develop the correct techniques,
before you know it you'll be elbowing it out with the wolf pack in the pileups.

The Novice license used to be kind of like a bunny slope at a ski hill. It
gave you a chance to operate with others at your skill level so that you
would be ready for what goes on in the other parts of the band. It is too
bad that so many hams are skipping over this and missing out on a valuable
part of their training.

Are they any good? I have been thinking about building a 2 meter
power amp with some plans from a Motorola Application Note. With the
price of a single transistor about a dollar a watt the price on these
kits is attractive.

My 411, at least, came with it already built in. I'm pretty sure the
411E addressed the poor (for the US anyway) choice of IF, by raising it
and thereby reducing intermod.

Message-ID: <08NOV93.13614276.0074.MUSIC@SLUMUS>
Source record: 274573

VE3ONT EME Test : 1993 Summary

During the two weekends of the 1993 A.R.R.L. International EME Competition, the Toronto VHF Society used the 46-m (150') dish at the Algonquin Radio Observatory. Here is a summary of our results.

Band QSOs Multipliers

144 235 46
432 246 41
1296 79 29

TOTAL 560 116 = 6,496,000 points

As a non-amateur antenna, VE3ONT's score should not be compared against that of other stations. The above listing represents one day each on 144 and 1296 MHz and 2 days on 432. The 432 score may be broken down to:
(first day) 167 * 37
+ (second day) 79 * 4 new ones.

Equipment: 144 & 432 MHz : KW, RHCP helix feeds; 1296 : 100 W, coffee-can with L/R switching. Power amps and transverters were mounted at the feed. Feeds were built by Bob Morton (VE3BFM) of Sinclabs Amateur Products Division. Preamps on 432 and 1296 were made by WD5AGO. Operators: VE2DFO, VE3ASO, VE3BFM, VE3CRU, VE3DSS, VE3EMS, VE3KDH, VE3VD, and W9IP.

Conditions the first weekend were fair, deteriorating after 1700 UTC on Sunday. The second weekend, aurora-induced absorption was very bad. QSB made copying weak 432 MHz stations difficult. 23 cm echos were extremely loud; we could hear our own echos with << 1 watt output. However, activity declined to nearly zero after European moonset. We also listened extensively for the Mars Observer with no result, even using AF9Y's extraordinary DSP software.

Equipment worked flawlessly the first weekend. During the second week-end, we had some equipment troubles at about 0900-1100 UTC on 432; at 0400 local time Saturday morning, VE3CRU and had W9IP the pleasure of going up in the 90' cherry-picker in wind and snow to fix the 432 MHz amplifier.

A large number of EME stations insisted on duplicate QSOs, sometimes 3 or 4 dupes (!). Needless to say, this cut into our ability to work other stations even once.

Please QSL to VE3ONT (1993 callbook address ONLY) or to VE3ASO, Dennis Mungham, R.R. 3, Mountain, Ontario K0E 1S0. Color photo-QSLs are being printed; expect a few weeks delay.

Michael Owen W9IP (tired but happy)

* MARS OBSERVER NEWS *
======================
Paula Cleggett-Haleim
Headquarters, Washington, D.C. October 22, 1993

MARS OBSERVER INVESTIGATION BOARD STATUS REPORT

The Mars Observer Investigation Board held its third set of meetings, Wednesday through Friday, October 20-22, in Washington, D.C.

Since the last set of board meetings, technical teams conducted reviews of specific Mars Observer subsystems at the Jet Propulsion Laboratory, Pasadena, California, and Martin Marietta Aerospace, East Windsor, New Jersey.

Plausible scenarios for what could have caused the loss of communication with the Mars Observer spacecraft are still being developed and technically challenged.

The board previously had recommended a program to attempt to activate the Balloon Relay Experiment, an instrument onboard Mars Observer. After several attempts to activate the experiment, ground station engineers did not detect any return signals. The NASA Deep Space Network stationed at Goldstone, California, and the Jodrell Bank Observatory, United Kingdom, were used. Non-activation of the Balloon Relay Experiment leads the board to conclude that a Mars Observer failure scenario involving only the spacecraft downlink portion of the telecommunications system is highly unlikely.

In the coming weeks, the board will evaluate results of hardware and software tests, and in some cases, computer simulations of various spacecraft subsystems.

Late November is still the target timeframe for delivering a final report to the NASA Administrator, who will make the report publicly available.

* STS-58 FAREWELL MESSAGE *
==========
The following packet radio beacon from Space Shuttle Columbia was received
by Dave, N6JLH in Northern California on 31-Oct-93:

W5RRR-1>SAREX <UI>:
This is STS-58 SAREX Robot station W5RRR-1
onboard the Space Shuttle Columbia.

W5RRR-1>QST <UI>:
73s from Columbia on our last day on orbit. We have a beautiful planet.
Thanks for participating in this mission with us.
The STS-58 Crew.

[Info via N6JLH]

* TEXAS BALLOON LAUNCH *
==========
The fifth flight of the North Texas Balloon Project will be on 13-Nov-93
at 08:30 CDT from a yet to be decided launch point south of Fort Worth,
Texas.

On board for this flight will be a cross band voice repeater with an uplink
on 445.800 MHz, and a downlink on 147.580 MHz. Also on board will be a GPS
satellite receiver linked to a packet transmitter. This will allow ground
stations to 'see' where and how high the payload is. The packet telemetry
downlink will be on 144.290 MHz, and ground stations may also digipeat
through this beacon using an uplink frequency of 145.890 MHz. The callsign
for the digipeater is W5SJZ-6.

A launch net will be conducted on 7155 KHz starting about 60 minutes or so
prior to launch. A local net will be conducted on 146.760 MHz for those in
the Fort Worth, Texas area. Net Control callsign will be W5SJZ (Lockheed
Amateur Radio Club)

Reception reports are welcomed. Please contact the mission coordinators on
the HF or VHF nets. QSL cards will be available for all who send in
accurate reception reports on the high altitude balloon payload.

Questions regarding this mission should be directed to:

Ed, N5PQR @ N5AUX.#DFW.TX.USA.NOAM.

About "Novice license" being the Bunny Slope...

I passed my Novice in November 1984. I didn't have a radio, and no means to get on the air. My first QSO was in June 1986. I had FORGOTTEN most of the letters! The novice bands were a fun, controlled environment where a 45-minute QSO, in which all you got to exchange were name, QTH, RST, and some basic info (yup, it was slow), was absolutely great. Chase DX on 15 and 10 meters, and during the winter, go down on 40 and 80 to chase the WAS.

If I could have done the no-code, I don't know that I would have developed such a keen interest in the HF stuff, because 2 meter FM is SO much easier to do - kind of an instant gratification thing. Gee, I couldn't even get on 10 meter phone then!

I SO anticipated getting my 13 wpm so I could plug in the microphone. Guess what...

My 100 watt rig with a dipole just couldn't fish through the big pileups. It was OK for basic ragchewing, but if somebody came in 1 kHz away, the contact was over. I found myself getting <<REALLY>> frustrated with SSB. Every time I flip on the radio, and go down to the phone band, and realize how susceptible it is to interference, even with filters, I go back to CW. It requires skill, on BOTH ends of the contact. It uses very little bandwidth and can be filtered like mad. Last Field Day I was running QRP with a dipole. On phone, I made 0 (ZERO) contacts in 2 hours of trying. On CW, I made about 140 in 12 hours of operating. Rarely had to call more than three times to get through.

Simply put, say what you will about it, for most of us CW is a much more reliable mode than phone when working on HF, VHF, UHF, or really anywhere else. SSB spreads that power out over a few kHz. CW has a punch. The Novice license got me hooked - it was the only way in.

I LIKE the no-code license. My fiancee is a no-code. I'm just afraid, like many others who are religious CW ops, that people who could really enjoy CW are simply not learning it because there's DEFINITELY no instant gratification. None. CW is a BITCH to learn and get good at. I'm still not all that good, even though I can zip along at 25 wpm. I still make a LOT of mistakes, especially when using the keyer, and I certainly don't copy every single character that goes into my ears. But I get enough to fill in the blanks.

After 6 years of CW operating, I FINALLY started to copy words instead of characters. SIX YEARS of operating!

You'll have to pry my key from my cold, stiff hands,

Scott NF3I

>I haven't used my HT for about a year and a half. When I dug it out of the
>box I found that I didn't have the manual. Could someone either post
>or send me Kenwood's USA address? Or if there is an electronic version of
>the TH-26AT manual somewhere, where can I find it?

Kenwood's USA operation is at 2201 East Dominguez Street, P.O. Box 22745,
Long Beach, CA 90801-5745. Their phone is 310-639-9000.

Last time I checked (about 1 year ago) the Amateur Radio Products
salesperson was Maria Lopez. You may talk her out of a manual, but it is
more likely she will refer you to their distributor to buy one.

Parts, service manuals, etc. are available from their distributor, Pacific
Coast Parts in Gardina, CA. Phone orders with Visa/Mastercard:
800-262-1312. I have had excellent service from them, more than I can say
for the Midwest outfit that supports Sansui (but that's another story).

I highly reccomend the gel-cell charger project in the 1993 ARRL handbook.
It uses a special IC that is designed to properly charge and maintain
lead-acid wet and gel type batteries. I am using one currently on my
scanner pack and have have great results. The chip, a Unitrode 3906, can
charge lead-acid types of up to 40V, but be sure to use a power pass
transistor to handle the heavy current. If used correctly, the charger
can safely maintain your battery for many years to come.

>A 2-meter HT was stolen from my car last weekend in Sunnyvale, California.

craig -- don't forget to scour the pawn shops. that's where my Yaesu FT727R and FT109rh turned up (still haven't found the HTX-202...). if someone finds 'em they should discretely contact the cops and let them retrieve the goods (pawn shop operators hate being caught with stolen property...8)).

hit up the radio shacks too. one of the guys at one of the stores had had someone come in asking what the '109 was worth...but i hadn't worked my way over to the store yet...was there that afternoon and the possible perp was there in the morning.

i also tried to get the word out to all the various organizations in the area -- including things like REACT (one of their guys found the 2 recovered rigs), the pro radio shops, surplus dealers, and such. you never know exactly where a trail will turn up.

it does depend on how much this stuff is worth to you tho, because it can be a lot of work....but in my case it yielded 2 rigs and their battery charger so i'd probably do it again.

: hand held radio. I would like to make one. Can someone tell me
: where they can buy good NiCd battery cells and what kind of epoxy
: to seal the battery pack. Also, any special things you want to
: remind me, please do so.

Be a little careful trying to replace single cells. The new one is not likely to be well matched with the old ones, particularly if the old ones have been in service a while. Also, there's a question about the cell design: if you look in a DigiKey catalog, you will see quite a number of different types of cell, all the same physical size. (rapid charge, high capacity, high rate of discharge, ...)

If you look in the back pages of QST or CQ, you will find ads from battery places like WW Associates (and two or three others) for replacement battery packs, both complete packs and the "inserts." An "insert" is simply the set of nicads all wired up and packaged in the proper physical configuration. On the Icom pack I've worked on, there were screws to remove to take the pack apart; replacing the insert was straightforward, and no glue was required. I'd expect on almost all packs to find screws or plastic snaps holding it together.

>This formula only works for a particular dielectric.
>73 de Jack,, K9CUN

The particular dielectric being air. This also only works for a coaxial
cable. For a twin-lead typ line, with an air dielectric,

Zo=138 log(2S/d)

I can't find the book right now, but I believe if you multiply the
impedances found in these equations by the dielectric constant of whatever
the diel. is, you'll get the impedance.

Why doesn't the ARRL have equations with real/non-air dielectrics?

Galen, KF0YJ
Dielectric constant of air: 1.0

>| Major : Computer Engineering | VS6HKA repeater : 145.750 MHz (-) |

Somehow the RF sensing that switches the amp to transmit is locking up on
transmit. You may have some RF from the output getting into the input.
Try moving the HT farther from the amp (or at least the cable to the antenna).
You may be able to adjust the RF sensing level in the amp so it switches at a
higher level.

Anybody have experience with the Daiwa amp in question?

Good Luck!!!
Galen, KF0YJ 73.

|> >>
|> >>Can the US government force US citizens to obey US laws while they are not
|> >>in the US?
|> >>
|> >>Even when those laws conflict/differ from the foreign country's laws?

NO. In general. Income tax laws are probably an exception. Most things, like minimum age of alcohol consumption, for example, wouldn't be, though. Or amateur radio operation. No jurisdiction.

|> >>
|> That is not true in general: US companies (and with them citizens) have to
|> comply with US laws abroad!
|> >No. But the forgien country can make such requirements.

True. The US does. Foreign amateurs in the US are limited to the privileges of their home licenses that Extras also have.

|>
|> >I believe _Canada_ (not the US) requires that US amateurs comply with their
|> >(US) band limits, as well as the Canadian limits, while in Canada.

I have a copy of the Canadian rules, and I spent $20.00 talking to a very nice fellow at Communications Canada in Sherbrooke, and both agree:

THIS IS NOT TRUE, DESPITE WHAT ANYONE SAYS. CANADA HAS NO SUCH REQUIREMENT.

I believe them, even though the ARRL says otherwise, even though at least one person has emailed me saying a DOC type told him THE EXACT OPPOSITE. But that's NOT in the rules.

*The rules say that *ANY* foreign amateur who has passed a 12+ wpm test has the ADVANCED + 12 privileges, that is, everything. This applies to Generals and above. Remember, Canadians have band plans but no legal HF subbands or mode restrictions (just bandwidth restrictions applied to entire bands). Phone is *legal* (but not welcome) everwhere. Like 160. Really!

*Any foreign amateur passing a 5-11 wpm code test has BASIC privileges on VHF and up (that's all the Technician stuff with a minor restriction or two concerning power (250 W DC in, I think), forbidding homebrew, and banning CONTROL operating of repeaters OR holding a club station license), PLUS CW on ALL frequencies below 30 MHz, subject to those minor restrictions. Unlike Canadian Basic + 5 licensees, they are NOT restricted to 4 MHz and below, but the CANNOT use phone there, either. This would apply to Novices, and Technicians who have passed a code test.

*Any foreign amateur with NO code is considered an ADVANCED no-code, with (basically :-) full Technician privileges and no Basic class restrictions. This applies to No-code Tech, clearly, with the entertaining irony that no-code Techs can use full power on 2 meters, but those who have passed a code test cannot. (No, I don't know how they tell the difference.)

Now all you need is a chart of frequencies and maybe your own copy of the rules, a couple of dozen 8-1/2 x 11 sheets.

The reciprocal treaty? It requires you to ID in English (Canadians can ID in French, too, and I don't see why Canada would care if you did, anyway, since there's no restriction in the rules themselves), and give location by municipality and province/territory. Oh, and ID in this form, if for example you're me in Quebec: KG2S/VE2. That's it.

Well, my brain has forgotten the exact amount of capacitance we needed
but basically we put a varicap diode across the transmit xtal and ran
audio from the mike to it. The diode was chosen to provide about 5 KHz
deviation at full audio. 'course, that made the rig an fm rig.
Details forgotten with the passage of time.

Hi All
I am looking for mods to a RS PRO-57 scanner that will open it up to
allow reception of the 137-138MHz NOAA APT satellite signal. Any mods,
sites with mods, etc. appreciated.

That formula will work for *air dielectric* lines, but isn't correct
for the more common cables with solid dielectrics of various values.
There's no easy way to determine the dielectric constant of a cable
by simple inspection.

You can attempt to measure the inductance and capacitance per unit
length and apply the formula

Zo=sqrt(L/C)

John Reed (n4tii@kd4nc.uucp) wrote:
: Hi All....

: I've recently bought an Isuzu Amigo, and the vehicle has little room under
: the dash to mount a stack of radios....(it's got plenty for ONE). Mine did
: not come with the center console so I was thinking of mounting a stack rack
: or something in the middle and put all my stuff in it...(I'll have 4 rigs,
: 10,2,220,440). I see no problems with that, or antenna considerations....

: The question to the group is will there be any RFI problems with radios vs
: the motor??? Anyone else having any problems with a rig in an amigo? I've
: been using an HT with external antenna for some time in it for no problems,
: but that is only 5 watts. The dealer said (not in writing, dammit) that I
: will have no problems with radio installations....and there's nothing warning
: against it in my owner's manual....

: So waddya say???

: John Reed, n4tii
: n4tii%kd4nc.uucp@gatech.edu

Gee, John, I didn't know you were having PROBLEMS installing
everything in the vehicle. I've got two suggestions:

(1) Why don't you just trade your rigs for a real tri-bander (Kenwood
makes one, and Icom does too, and even Yaesu).

(2) You shoulda thought about this BEFORE you bought a small
chick-magnet sporty jeep-look-alike.

Questions:

(1) Where's the motor on this Amigo? Under the vehicle/between the
seats? It should not have any effect on the rigs if it's where normal
motors go (under the hood in front). I installed my rig (gee, I only
have one in my vehicle) in my Jeep Cherokee and it has no problems.

(2) Where do the antennae go on this rag-top? I think it's a rag-top
at least (I don't remember).

Conclusion:

You've really got nothing to lose by trying to mount everything
wherever you wang (and it fits). Why don't you bring the thing down
here and have us REACT members do it for you???

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Measure the SWR of the line with the far end unterminated. This will
: let you calculate line loss. This'll work even if your meter is of a
: different characteristic impedance since infinity to 1 is still infinity
: to 1 no matter what small difference there may be in the 1. Now terminate
: the line in a known impedance. Measure the SWR and calculate what the line
: impedance should be to give that reading. Now correct that for the difference,
: if any, caused by your meter's impedance. That's your cable impedance.

Hmmm... Let's say I have a length of RG-62 (but don't know that's what
it is), and it has an attenuation of about 5dB. If the length (in wavelengths)
is right (odd number of 1/4 waves), that should give you pretty close to 1:1 SWR
as measured with a 50 ohm SWR bridge. But a bit different electrical length
(even number of 1/4 waves) could give you a 4:1 SWR, for the same attenuation.
So I don't see how the first three sentences above work out...

BTW, this is the sort of thing I was thinking of when I posted a followup
a few weeks ago suggesting that if you want to measure some line parameter
(it was loss at that time), you should be careful to calibrate
your measurements--to check them against some known values. I'll repeat
it here: the loss, or the impedance, or the electrical length, isn't
what's stamped on the line, or what's in a book, or what you measure:
it is what it is. Any of the others is only an approximation.
Measurements can come very close, but they can also be very far off if
you happen to make an error in the application of the instruments you
use or if the instruments are out of calibration. By using proper
standards and procedures, you can minimize the measurement error, and
probably get the best approximations through measurement.

As others have pointed out in a bit different context, you can do a lot
toward checking the accuracy of a line measurement if you do the
measurement over a range of frequencies. If the parameters you are
trying to measure don't vary like you'd expect (and your expectations
are right ;-), then suspect the measurement.

4040. Re: Is the band dead -- or nbobody on?

I tune through the CB frequencies. Channel 19 (27.215?) is usually a good indication of band conditions.

Likewise, the shortwave broadcasters around 15 meters are also a good beacon system.

Well they say "Made in Korea for Tandy Corp", so I don't think Icom
is involved. I heard they were made by the same company that makes
their scanners.

4042. Looking for Hammarlund manual (mine has 3 pages missing!)

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-08 23:21:28 UTC
From: jp07@gte.com
Message-ID: <19081@bunny.GTE.COM>
Source record: 274568

I'm looking for someone with the "Instruction and Service Information" manual
for a Hammarlund HX-500 Transmitter. My copy is missing pages 13, 14, &
37 (a schematic). If you can help out, via fax or mail, I'll pre-pay the
phone call or postage.
Thanks for any help. -Jim.

4043. How Sensitive Are Front-Ends?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-09 00:12:35 UTC
From: sdkuo@argo.acs.oakland.edu
Message-ID: <2bmn9j$d0q@oak.oakland.edu>
Source record: 274569
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc

How sensitive are the front-ends of my scanner, cell-phone and amateur rig? My plan is to have an Icom2410 (up to 45/35 watts on 144/440), scanner (wide-band) and cell-phone (3 watts on 800) all mounted in my car. All three antennas will be at the rear end spaced approximately 2-3 feet from each other. The Icom antenna will be trunk-lip-mount, the cell-phone antenna is glass mount at the top of the glass and the scanner antenna will be trunk-lip-mount on the other side. With this configuration is it safe to operate all three devices simultaneously without fear of damaging front-ends?

thanks for all replies,
--

From: Cecil_A_Moore@ccm.hf.INTel.COM
Message-ID: <931108165455_24@ccm.hf.intel.com>
Source record: 274381

Text item: Text_1

>I'm running an HW-101 with an MFJ 941-D tuner into a 20m dipole.
>...but I get good results on 80m (low SWR, 100w forward, 1-5 w reflected
>David J Adams, N9UXU Internet: djadams@silver.ucs.indiana.edu

David, ELNEC (antenna analysis program) says that your 20m dipole
has a radiation impedence of around 1-j2000 on 80m. That means an
antenna-end SWR of greater than 100/1 on whatever transmission line
you are using. The 40m impedence is a little better at 12-j1000.

Almost none of your power is making it to the antenna. The obvious
solution is a longer antenna. If you absolutely cannot put up a
longer antenna, you can disconnect your transmission line at the
transmitter end, short the two conductors together, and feed it
as a single-ended "long-wire" on 80m using the "wire" output on your
MFJ-941.

New amateur radio society for the Russian Federation
==========

The disintegration of the USSR saw the collapse of the former
country's amateur radio society, the RSF. There is now a new
national amateur radio organisation registered in the Russian
Federation, known as (in English) the "union of radio amateurs
of Russia", otherwise called the SRR.

It was registered last April with the Russian Ministry of
Justice as the country's national amateur radio organisation.

The SRR is seeking membership of the International Amateur
Radio Union (IARU).

If you're going to the Russian Federation and are interested
in operating while you're there, you should apply to the SRR.
They have an agreement with the Telecommunications Author-
ities which enables them to provide this service.

Condensed from WIA News-on-Disk November 1993

WAE RTTY Contest rules part 2
==========
Multipliers: each DXCC/WAE-country counts as a multiplier.
Multipliers count only once per band.

Multiplier bonus:

A multiplier on 3.5 MHz may be multiplied by four.
A multilpier on 7 MHz may be multiplied by three.
A multiplier on 14/21/10 MHz may be multiplied by two.

WAE Country list : C3-CT1-CU-DL-EA-EA6-EI-F-G-GD-GI-GJ-GM- GM (Shetland)-GU-GW-HA-HB-HB0-HV-I-IS-IT-JW(Bear)-JW(Spitsbergen) -JX-LA-LX-LZ-OE-OH-OH0-OK-ON-OY-OZ-PA-SM-SP-SV-SV5(Rhodes)-SV9 (Crete) -SV(Athos) -T7-TA(Eur.) -TF-TK -UA1,2,3,4,6 -UA2/UZ2F -UA1FJL-UB-UC-UN/UA1N/UZ1N-UO-UP-UQ-UR-Y2-YO-YU-ZA-ZB2-1A0-3A-4J1-4U1(Geneva)-4U1(Vienna)-9H1.

QTC points: Count 1 point for each QTC reported to any station NOT ON YOUR OWN CONTINENT. Each station may both send and receive QTCs, but the sum of QTCs exchanged between two stations (sent plus received) must not exceed 10. Eaxh QTC (message) will contain: Time, Callsign, Number. Example: QTC: 1307/WA7EGA/131 means that you worked WA7EGQA at 1307 UTC and received his serial number 131.

A QSO may be reported only once and not back to the originating station. (You cannot report a QSO with WA7EGA back to WA7EGA for credit). The same station may be worked several times to complete the quota of 10, but only the original contact has QSO point value.

A uniform list of QTCs sent must be kept. QTC 3/7 indicates that this is the third series and that 7 QTCs are now being sent. Record all received QTCs on a separate sheet with a clear indication of the sender. If more than 100 QTCs are claimed, a QTC check-list must show that the maximum quota of 10 QTCs per station has not been exceeded.

Final scores: Multiply total number of QSOs plus QTCs by total number of multipliers

To be continued

IPS weekly report
---
29 October - 4 November 1993

Issue no.: 45

Date of issue: 5 November 1993

Date 29 30 31 01 02 03 04
10cm 92 91 91 91 93 94 96
A 09 02 04 08 03 14 (50 estimated)
T -6 30 55 44 38 61 76

Summary of activity

Solar activity was very low 29th October to 3rd November, and low on 4th.

The geomagnetic field at Learmonth (WA) was quiet or quiet to unsettled 29th-3rd, with brief active periods on 29th. On 5th November the field was at active to major storm levels.

Ionospheric F2 critical frequencies at Sydney were depressed by up to 30 per cent on 29th-30th, near predicted monthly values to 3rd November, with enhanced periods of up to 40 per cent occuring on 3rd-4th, and depressed by up to 30 per cent both days after local sunset (W.A.). Some sporadic E layer blanketing was observed on 29th, and spread F conditions observed on 1st.

Forecast for the next week (5 - 11 November)

Solar : Low.

Geomagnetic: Nov. 5: active to minor storm
Nov 6-7: unsettled to active
Nov 8-11: quiet to unsetled

Ionospheric: Nov 5: 10-30 per cent below predicted monthly values
Nov 6-7: 5-15 per cent below predicted monthly values
Nov 8-11: near predicted monthly values

>in math classes these days?

I don't know if they teach such things in school anymore or not.

But if they do, I hope that they also teach that the equation above
is for AIR dielectric only. The complete formula is:

Zo = (138/e^1/2)log10(D/d)

where: e is the dielectric constant
D is the inside diameter of the outer conductor
d is the outside diameter of the inner conductor

: >It did not happen in my friend's FT-411.
: > Why the Amp continue to transmit after PTT released ? Why don't happen
: >in the FT-411 ?

: Somehow the RF sensing that switches the amp to transmit is locking up on
: transmit. You may have some RF from the output getting into the input.
: Try moving the HT farther from the amp (or at least the cable to the antenna).
: You may be able to adjust the RF sensing level in the amp so it switches at a
: higher level.

: Anybody have experience with the Daiwa amp in question?

I forget to tell last time that when the amp was locked. Even I switch
off my HT , the amp continue to TX. Until I disconnect the cable from
my HT, the amp stop to TX. But did not happen to my friend's FT-411.

I had a similar problem with a GAP two years ago. Sounds like you got the same advice from the factory as I did. They suggested different lengths of coax. It didn't make any difference. Mine was a perfect 1:1 on 80M, but some other bands (I can't remember which) were over 2:1. The factory made the same claim; there should be no reason for the high SWR. I had a second problem. The GAP really bent in a moderate (25 - 30mph) wind. I had it guyed with fish line, but the lines were not real taught and the stakes not that far away from the base. After a weekend of wind like this, the antenna developed a permanent bend in it.

Although I wanted the antenna to get 100 countries on 40M and 80M for 5-band DXCC, I did not want to pay good money for one that didn't have acceptable SWR on all

bands. Also, I did not like the idea of a bent antenna. The folks at the factory were kind enough to take it back (my shipping expense, of course) and refund my money, minus a few bucks for the base which I had set in concrete; so when I get a Butternut perhaps next year...

The main reason I got the GAP was that it was 10 through 80 with the WARC bands and only needed 3 radials (I mounted it in a flower garden at the edge of my property and did not want to dig up the flowers for lots of radials). Perfect, I thought. Didn't work out that way.

One thing that was true in the advertising was that it was a very quiet listening antenna. Having had a 14AVQ some years ago, I know how noisy a vertical can be. The GAP was very quiet.

>
>
1.Place the radio in remote control.
2.Place the microphone,face down,over the speaker.
3.Make sure the volume is not all the way down on the band/bands you wish
to "control" on.
4.Place another radio on one of the freqs the 742 is monitoring.
5.Send dtmf just like you were using the 742's mic.

I know its kinda silly,but believe it or not thats how its done.

p.s. the 742's volume doesn't have to be up very loud.

4051. H. J. Res 199 - Does anyone know what it is?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-09 02:54:41 UTC
From: tweek@netcom.com
Message-ID: <tweekCG7Er6.A45@netcom.com>
Source record: 274386
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I just received a letter in the mail today from my US Representative. I assume that he got my name from other than the Ham Callsign database since it was addressed to me WITH my middle name included... my ticket only carries the initial "D".

The Representative who sent it is Bill Baker, 10th District, CA and he serves on the following committees:

- Committee on Public Works and Transportation
subs: - Economic Development
- Investigations and Oversight
- Surface Transportation

- Committee on Science, Space and Technology
- Energy

- Republican Research Committee
Health Care Task Force - Vice Chairman

- Illegal Immigration Task Force

The letter went:

November 2, 1993

I understand the important role that amateur radio operators play in our society and would like to let you know that I have cosponsored legislation protectiong and enhancing amateur radio.

Recently, we have seen amateur radio operators play vital roles during life-threatening natural disasters such as Hurricanes Hugo and Andrew, the Loma Prieta earthquake, the eruption of Mt. St. Hellens, and the California wildfires. We must ensure that the government's thirst for regulation and control does not interfere with the unique role amateur radio operators play in our society.

I have cosponsored H.J.Res 199 which seeks to ensure that the Federal Communications Commission (FCC) does not interfere with amateur radio. Specifically, the bill finds that the FCC should make reasonable accommodation for the effective operation of amateur radio from residences, private vehicles, and public areas. It also calls upon the FCC to enhance the development of amateur radio by developing rules

and regulations that encourage the use of new technologies
within the amateur radio service.

I hope this legislation will help ensure that the federal
government does not unduly interfere with amateur radio
operators. Please let me know if I can be of any assistance
in the future.

Sincerely
s/Bill
Bill Baker
Member of Congress

So, what is known of this Resolution? Forgive me if it was mentioned
already in either of these two newsgroups... I scanned the subjects of
all 1500+ articles in the spool, and nothing seemed to mention it... I
did NOT scan the articles... as a grep for 199 would present EVERY
article with a date of 1993 in it... sigh....

What two committies are involved? I assume H.J. refers to House Joint...
I would suspect the Science, Space, and Technology committee for one... is
the other one a Senate committee... or another house committee?

tweek@netcom.com tweek@tweekco.uucp WWIVNet 1@511 DoD #MCMLX N6QYA
I'd rather get my cable service from the phone company,
than my phone service from the cable company.

Somewhat along the same lines. . .

I purchase two Panasonic LCR12V2.2P lead-acid batteries for use with the HTX-202. These are fairly nice 2.2 amp/hour batteries that are about the same size as my HTX-202. I've used these batteries for hours on end without having to recharge them -- much better than the stock NiCds. The only "problem" I've run into so far is charging them. I have a small lead-acid charger of the type you can get in the Automotive departments at Wal-Mart, K-Mart, Target, etc. that is settable between 2A/6A charging rates. So far this charger seems to be working well but it's a manual type and I'm not sure how long I should charge the batteries. What I've been doing is letting the battery drop to about 10 to 10.5 volts then throwing it on the charger and checking it every 30 minutes to an hour with a DMM. When the battery voltage increases to about 12 volts, I remove them from the charger and put them back in the carrying case.

One thing is absolutely accurate: I could use some tips on charging lead-acid batteries. The particular ones I have are stamped "Constant Voltage Charge" with the ratings "cycle use: 14.6-15.0V and standby use: 13.6-13.8V." Inital charge current is rated at 0.88A.

A couple members of the local club want to give this contest a try.
I read the rules briefly in QST and the exchange information is certainly
different from any contest I have done (read field day.) We'll probably
use a terminal and separate logging pc. Is there any software which handles
the "unique" scoring stuff for this contest?

I suppose we could do the loggin by hand since we probably won't make that
many contacts, but then whats the point of all this modern technology?? ;-)

Just wondering...

[regarding my post about a stolen 2-meter ICOM]:

> don't forget to scour the pawn shops...hit up the radio shacks
> too...

Yeah, I went to Ham Radio Outlet as soon as they opened the next day. They were extremely helpful and promised to spread the word among their stores. I also called "The Radio Place" in Sacramento. The thieves were most likely NOT hams (how many of you know fellow hams that would break into a car and steal equipment? I don't), so they will probably try to contact somebody to find out what the radio's worth.

> i also tried to get the word out to all the various organizations in
> the area...pro radio shops, surplus dealers, and such...

Also good ideas, also done. I went to surplus dealers in Santa Clara and Mountain View; all were sympathetic and helpful.

> it does depend on how much this stuff is worth to you tho, because
> it can be a lot of work....but in my case it yielded 2 rigs and
> their battery charger so i'd probably do it again.

Good point, Bill. Although having my ICOM stolen wasn't the end of the world for me, I believe that making it difficult for thieves to get away with their crime is well worth the trouble. If they are caught, or if they cannot sell their stolen goods, perhaps it will help cut down the ripoffs.

Again, if anybody comes across someone selling an ICOM 2 SAT handheld, serial number 4220, please contact me or the Sunnyvale Police. The radio has a no-name 12V battery attached, and no bottom cover.

Thanks to all!

This is a fine idea, but the 'droids at the local Shack are clever enough to realize that the catalog price is $2.95, and the coupon is for a single ITEM of $3.00 or more.

Hi gary....
Good to meet you at the Lawrenceville Fest...

There was a guy on here who posted a nice blurb on the radio shack HT's.

The rig, he said, was made by Maxon for radio shack, under license and design
of Icom....so essentially...it's an ICOM....the display, layout, battery and
mic connections kinda imply this....

I wish I knew who posted that...

(Still got that HT?)

>wherever you wang (and it fits). Why don't you bring the thing down
>here and have us REACT members do it for you???

You funny!!!!

Actually, I've got it licked...I bought a few hickeys at the hamfest and
I plan on mounting right in the middle where the center console would go.

I plan on replacing the rag top with a hard top... and for antennas, I plan
on hardmounting two of them on the roof and the 3rd will go on the Spare Tire
thing.... (I'm gonna have 10-440 in it! With provisions to throw the HF in
when needed....)

I've got some good questions for a lot of you...

For those of you who don't know, CAP has been allocated a few splinter freqs...(I won't tell you what they are....nyah nyah nyah) but anyway, a lot of rigs out on the market will not cover them.,.... does anybody have any information on installing 12.5 channel spacing in a few Icom rigs, ie the 02at, 2GAT, 28,228, etc..... Basically, we're wanting to know what diodes, etc, need to be added/cut to allow programming of both 5khz and 12.5 channels.... (ie: .125 and .1375 or something....)

Thanks in advance...

John Reed, N4TII

:
:
: I agree with your front end intermod observations, however, in my area
: its not much of a problem. What is unusual is the poor battery performance.
: I find it hard to run mine down! I have the 1100 ma extended battery pack
: and it never seems to go down. I have owned several HT's and the TH-78
: has the best battery life of anything I've owned.
:
: My only complaint with the thing is I can't remember how to do all the
: features unless I have a manual with me.

Why? Mine is completely different! The intermod rejection is between
satisfy and good, you know, the VHF band from 138-174 (except 144-6 for
HAMs) is fully utilized for commercial, so congest. I think HK is a good
"test field" for HTs. About the battery discharge life, I use a 700mAH
battery pack and it lasts 10 hr. of Rx and 4-5 hrs of operation on a mix
of Tx/Rx. What's wrong on your TH-78A? Or the battery?

I believe it was Shaw who said something like: "Britain and the
U.S. are two countries separated by a common language".

They are also separated by the fact that Brits always write
their dates backwards! :-)

<stuff deleted>
I wonder where all these whiners would go if RS just closed shop
like they seem to want?

Hi Paul...
I can't understand some people, but then again, maybe I'm just dense.

In "the good old days", the years following WWII and the Korean war
there were a LOT of electronic experimenters about. As would be expected
in our free market system, there were in turn a LOT of electronic parts
suppliers. That's not true any more. We have no more Olsens there
is no more Layfayette.... Cripe, even Silversteins is gone (a real
Detroit landmark - acres of war surplus "stuff"). So what is left?
Who's going to provide competition and therefore keep the level of service
high and the prices low? Well, being in a large metropolitan area I can
get to a commercial parts supplier within half an hour but that's not true
everywhere. In Traverse City where I like to vacation, the fine folks in
the Cherryland Amateur Radio Club have three choices: Wait until they have
a trip downstate, Wait for mail order or go to the Traverse City Radio
Shack store. (For what it's worth, the folks at the T.C. RS are a fine
bunch and try very hard to excel.)

I've been behind the RS counter several times a week for a bit over a
year now.... I've kinda gotten accustomed to the occasional "Radio Shack
Customer-Droid". (Insert an appropriate number of smilies here.....
.....) The next several hundred
customers are a real delight to deal with. If I didn't enjoy the people
I wouldn't work there.

Of course, if someone really doesn't like dealing with Radio Shack then
that's fine with me too. I understand that one store can't be the answer
to everyones needs. If enough folks in a geographic area feel that
there is a better solution then I encourage them to find some capital
and start a business that meets those needs. Judging by the paupacy of
electronic hobbiest stores, I guess RS is at least doing "okay".

I don't travel much anymore and I wonder to the net: How well served
are the electronic hobbiests in your part of the world? If you needed
a small part or maybe an oddball component like a video mixer, outdoor
telephone bell or wireless microphone, what are your non-Radio Shack
choices? (no fair researching this one... it's gotta be off the top
of your head)

I have two lead-acid batteries: 1) a 12v QUANTUM battery I use with my HT
and 2) a 6v Powerpac+ from W&W Associates in NY (advertised in the ham mags)
I use for my camcorder. I charge them every monthy or two, usually overnight.
I don't worry about overcharging. The instructions for the QUANTUM advise
not to leave the battery on the charger for more than three days. Outside
of being somewhat heavy, they really hold a charge and they are ready to go
whenever I need them, unlike the three NiCad battery packs for my HT. Also,
it is really nice not to have to worry about a battery going dead when I
am engaged in a day-long ham communication activity or taping something.

If I remember the instructions for both batteries, the recommendation is to
recharge them after every use, no matter how much or little they were used.

Greg, those are good batteries for running HTs. You are only partially charging them though. The terminal voltage of a fully charged lead-acid cell should be 13.8 volts. This is only a "surface charge" that will quickly drop to about 12.5 volts under load. What you want is a constant voltage charger with current limiting. For slow charging, apply a voltage of 13.8 volts to the battery. It can stay on charge indefinitely at that voltage. For a more rapid and complete charge, use 14.5 volts and watch the battery temperature. When it starts to get warm, drop to 13.8 volts on the charger. Alternatively, a pulse charger can be used with voltage sampling between pulses. When the battery terminal voltage reaches 13.8, it's charged. Set the current limit so that you don't exceed the rated 0.88 A when the battery is first placed on charge. It'll draw more current when it's terminal voltage is low. As the terminal voltage increases, current draw will drop.

A lab power supply makes an adequate charger. I've used the little Radio Shack lab supply for this purpose. One caveat, however, make sure you use a diode between the supply and the battery. If you don't, and the lab supply's AC power is interrupted for a moment, the battery will blow the 723 regulator IC in the supply. Allow for the 0.6 volt drop across the diode when setting charging voltage. I blew the regulator ICs in both the Radio Shack supply and in an Astron supply before I caught on to this problem. If you have something like a Systron-Donner,

Motorola, or HP lab supply, they're already reverse voltage protected.
Still, if you aren't sure, the diode is good insurance.

4076. 80m on 20m dipole

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-09 14:19:53 UTC
From: djadams@silver.ucs.indiana.edu
Message-ID: <CG8AH6.B1q@usenet.ucs.indiana.edu>
Source record: 274400

Actually, I've heard this quite a bit. I also tend to believe it.

However, my 20m dipole works on 20m (I tuned for swr...no transmit, not licensed for it) and 80m (oddly, I can't convince it to work on 10). I've made several qsos in the last couple days. I am going to replace the coax with balanced feed, though, as I'm told that will yield better results.

Well I run 4 radios 30-50, 150-174, 450-470 and 865 (trunked SMR)

All on one antenna with a multiplexor. Both are made by Austin antenna
in Gonic NH. All except the 800Mhz trunking are 100+ watts. Never had
a bit of trouble. I have better performance than I had with 4 antennas
and I have had multiple radios transmitting and receiving at the
same time (I have a x-band repeat on the low-band/Uhf.

4078. question about Rohn 25 tower sections

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-09 14:28:14 UTC
From: ginsburg@wellfleet.COM
Message-ID: <9311091428.AA24964@wa2cjt.wellfleet>
Source record: 274416

I have the opportunity to pick up 4 10 ft sections of Rohn 25 tower for $100. They're 25 years old, and have been sitting in a garage for the last 18 years. They spent the first 7 years in a free-standing configuration, no house brackets, no guys. The seller told me the tower has had 2 men on top with no problem, and it lived through 2 hurricanes during the 7 years.

My questions are:

1. What are the chances that the bottom section, or any other sections were weakened enough over 7 years to yield the tower unsafe given the lack of secure installation?

2. What signs can I look for that will indicate damage?

Some hints received via my local 2-mtr repeater:

1. Rohn suggests 30 ft max for free-standing so 40 ft might be OK, call Rohn (which I plan on doing).

2. Look for egg shaped bolt holes.

3. Look for twisting.

Thanks and 73,
Scott, WA2CJT

>appreciated.

Try Pep Boys, or any of the other chain automotive stores. They sell a
2 amp trickle charger for $9 that would be perfect for keeping these
boys in top condition. You could also use any of their other chargers,
up to and including the monsters on wheels. Just make sure you don't
overheat the batteries. If you boil a gel cell, you can't replace the
water. (Well you sometimes can with a hypodermic needle, but it's tricky.)

Another note on lead-acid batteries. Don't store these batteries discharged.
They'll sulphate and die. Keep them charged periodically for best life.
If you're shopping at a hamfest or surplus house, bring a meter. Don't
bother with any battery that has a terminal voltage below 10.5 volts.
It *may* accept a charge, but don't count on it.

I run 2 meters, 70 cm, and cellphone in my truck. I use a Comet
triplexer and a Comet dualband antenna. It's worked fine, but
I've never tried transmitting on all three bands at once. It's
very unlikely that the 70cm or cellphone will bother the 2 meter
receiver, but the 2 meter transmitter may bother the 70 cm receiver
and the 70 cm transmitter may bother the cellphone. I doubt you'll
see any actual damage, however. The triplexer I use gives me more
isolation than parallel separate antennas, so your problems may
be more severe.

Note that I'm using a dualband antenna for three bands. That's
not ideal, but it seems to perform well with the cellphone.
Comet does make a triband antenna, but it's a good bit taller.

Mark,

If I'm not mistaken, there was a Swan 350 on the desk at HRO in Denver last Saturday for $90. In my opinion (and having never been a Swan fan), a hundred bucks is much more like it for a 350 in *any* condition. The best thing about a Swan is the dial mechanism - wonderfully smooth. Unfortunately, what was behind the knobs was only average, even when they were new. Of course, for gear of this vintage, you will get a lot of opinions about worth and quality.

Each side of a 20 meter dipole is a half wave on 10 meters this presents
somthing over 2000 ohms impeadence on 10 meters resulting in a about a
1:40 SWR. This will give you a great deal of loss in the coax if you
are able to match it. Also if you go to open line to get away from the
loss it is likely to put RF in the shack. The only way to fix this is
to shorten or lengthen the antenna to an odd number of quarter wave
length i.e. 1, 3, 5, 7 and so on.

28.5 2.5

28.6 2.6
28.7 2.9
28.8 3.0
2:1 Endpoints 27.7Mh to 28.3

I have made modifications to the 12M tunig with great results. I have hope
for the 10 M so that I can use the total 600 kc bandwidth by tuning it a little.

For 15 meters I will start making the tuning rod shoter this weekend.

I don't know what I am going to do about 40 and 20 meters

One thing I have found is that the SWR gets prity low (less that 1.5) but that
point is not always in the ham bands.

My antenna is on a 10 foot pole in my backyard. I run 170 feet of Belden 8214 coax.

I was not expecting these problems as I though is was a plug and play antenna. Besides
I do not have an antenna tuner. I must say if I had to do it all over again I would
by an R7 instead.

If it's working well, why mess with it? Yes, you will have less loss with open-wire. But it is a pain to route since it should be kept away from metal, etc. If you're making QSOs, and that's all you're after, why not just go with it? If you want to experiment for the fun of it, or just the desire to make it work a little better, then go for it.

I have a 2m, 220, 440 rig all in the car at the csame time, with
10-40W. The antennas are all on the same back window. Unless I turn the
audio down, the other two rigs screen when I key down, but no damage
ever occurs. (that's scream not screen).

>charge current is rated at 0.88A.
> -- Greg KE4DPX

According to some info I have from PowerSonic(TM), a lead-acid battery is
at 100% charge when the battery 'relaxes' to 12.75 volts. By 'relaxing', the
voltage on the battery will drop after a charger is disconnected, leveling
off at a certain voltage after some time. This level value is the 'relaxed'
value.
They have a small chart that lists 12.75 volts as 100%, going down to 12.2
volts as 45%, each 0.05 volts corresponding to 5%. This would lead you to
believe that any voltage below 11.75 volts as a dead battery. The literature
goes on to say that the batteries should not have a large current draw when
the voltage drops below 11.90 volts. It also says to get the longest life,
keep the battery voltage at least 12.45 volts or 70% charge.

See the article in the ARRL handbook (I have the 87 edition handy) titled
"Controlled Battery Charger for Emergency Power Supplies". It has a charger
circuit that controlls the charging voltage for deep cycle batteries.

I charge mine with solar panels and a charge controller from SCI.

I would not use a battery that's below 12.0 volts under load. Sometimes
they don't come all the way back up.

Fun is the operative concept here,
Galen, KF0YJ

4095. Domestic QSL Strategies

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-09 16:33:09 UTC
From: Charles.R.Hohenstein.1@nd.edu
Message-ID: <Charles.R.Hohenstein.1-091193111547@oldmac14.debartolo.lab.nd.edu>
Source record: 274412

I am a recently-licensed radio amateur and don't have a lot of experience with QSLing, but on the advice of a few articles I read, I sent out a bunch of QSLs with stamped, self-addressed envelopes to increase the return rate. I was surprised to discover that the big problem was not people who wouldn't reply, but people with bad addresses in the call book. A major number of QSLs have come back stamped "return to sender," "forwarding order expired" or something similar.

Obviously, I know now to ask more consistently whether the address in the callbook is good. But in at least one case, I have asked someone this, been assured that the callbook address is o.k., and still had my QSL returned by the post office. Wayne Green claims that many people in the call book are actually dead, not merely relocated.

So here are my questions:

1. Does it help a lot to use something like the Buckmaster CD ROM in place of a printed call book, or do a lot of addresses still turn out to be wrong?

2. The ARRL Operating Manual says that I can't send domestic QSLs to bureaus for incoming DX QSLs. Does the League, then, maintain a domestic QSL bureau? Sorry if this is an ignorant question, but the Operating Manual doesn't mention one, unless I missed something (which is entirely possible).

3. Suppose that an amateur doesn't even know that his call book address is invalid. How can I or anyone else let him know, if the whole problem is that the guy can't be reached? Maybe the League should share the last known address for ARRL members, but that sounds like a lot of work.

4. Does anyone have any golden advice about how to proceed in such situations?

4096. One Antenna Two

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-09 16:55:23 UTC
From: romanenkod@agcs.com
Message-ID: <2boi1r$6pr@vlsi.agcs.com>
Source record: 274413

In the process of looking at dual band (2m/70cm) mobile radios, I have observed some radios come with one antenna lead for both bands, others, two antenna leads, one for each band.

For the radios with one antenna lead, the obvious need is a dual band antenna. However, my question lies in those radios with two antenna leads. What are the advantages / disadvantages of:

1. From a two antenna lead, run separate coax, mount two single band antennas on the vehicle.

Adv: - Each antenna tuned for a particular band

Dis: - Two antennas on top of vehicle
- Two coax runs required

2. From a two antenna lead, run into a duplexer, run coax to dual band antenna.

Adv: - Single antenna on vehicle

Dis:

In pricing the two options, the cost for each setup would be about the same.

Any additional information on the above would be appreciated.

Still waiting for my license...
-Dan

: I have the opportunity to pick up 4 10 ft sections of Rohn 25 tower for $100.
: They're 25 years old, and have been sitting in a garage for the last
: 18 years. They spent the first 7 years in a free-standing configuration,
: no house brackets, no guys. The seller told me the tower has had 2 men
: on top with no problem, and it lived through 2 hurricanes during the 7
: years.

: My questions are:

: 1. What are the chances that the bottom section, or any other
: sections were weakened enough over 7 years to yield the tower
: unsafe given the lack of secure installation?

: 2. What signs can I look for that will indicate damage?

: Some hints received via my local 2-mtr repeater:

: 1. Rohn suggests 30 ft max for free-standing so 40 ft might
: be OK, call Rohn (which I plan on doing).

: 2. Look for egg shaped bolt holes.

: 3. Look for twisting.

You might add
Look for obvious cracks...the smaller ones would have to be
magnafluxed.

What is the galvanize like? Still good? corrosion?

I think I would be more concerned about the first 7 years than the
last 18. Sitting in a garage should not cause problems, as long as
the sections were not drven on, beat on, and in general abused.

Another thing you might inquire about is what was the size of the
antenna on top during the 7 years it was up. I think the 25G
could support about 2 sq. ft. or so self supporting, but Rohn
should be able to give you the answer.

: So here are my questions:

: 1. Does it help a lot to use something like the Buckmaster CD ROM in place
: of a printed call book, or do a lot of addresses still turn out to be
: wrong?

What is the year of your call book? Buckmaster gets their data from the
FCC database the same as the Callbook. I'm not sure what the update cycle
on Buckmaster is, but if it is not more timely than the Callbook you
might get the same answer. Are you on, or can get access to a DX packet
cluster? Some of them have the Buckmaster ROM on line. Bottom line, if
the ham does not send in a Form 610 for address change, none of the
call info will be correct. Some people don't send in change of address
info.

: 2. The ARRL Operating Manual says that I can't send domestic QSLs to
: bureaus for incoming DX QSLs. Does the League, then, maintain a domestic
: QSL bureau? Sorry if this is an ignorant question, but the Operating Manual
: doesn't mention one, unless I missed something (which is entirely
: possible).

Not ignorant. But the answer is no. I wish this was so, but I guess they
would be buried worse than they are now. And once the cards leave Newington,
it is dedicated volunteers all the way.

: 3. Suppose that an amateur doesn't even know that his call book address is
: invalid. How can I or anyone else let him know, if the whole problem is
: that the guy can't be reached? Maybe the League should share the last known
: address for ARRL members, but that sounds like a lot of work.

Outside of working him again, not much can be done. Is there a white page
thing on the standard BBS packet? But there is no gaurentee the guy would

be listed. For the real answer, see #1 above. Maybe some don't realize the Callbook address comes from their license info.

: 4. Does anyone have any golden advice about how to proceed in such
: situations?

If you need the state, work another and send the card to him. Eventually you will work someone that has a current address, or at least a current forwarding.

Sight along the side of each section to see how straight it is, considering the hurricanes.
>
> 2. What signs can I look for that will indicate damage?
Tap along the whole length of each leg and listen to the sound. A clear ring indicates the metal is probably OK. Any dead spots indicate rust/corrosion and a structurally weak section.

>Some hints received via my local 2-mtr repeater:

Good ideas. Use guys generously and do the sighting mentioned below 1.

I put up a used 25G, 30 Ft high, was about 7 years old when I got it, but I live in Colo, where we don't have as much moisture.
I plan to go to 60 Ft, usin guys at 30 and 55 ft. It's attached with a house bracket to my separate garage. Holds up a TH-3, 2m 3ele. Quad, 3ele 6m yagi and a 440 corner reflector.

Be careful,
Galen, KF0YJ

The thing I always wonder is why traps are never suggested to perform this function on tuned feeder dipoles and 'random' wire antennas. Anybody have any thoughts on this?

I maintain a database of all the hams here in Sonoma County CA. It is absolutely amazing how many hams move without telling the FCC. Heck, we even have members of the local club (and at least one Board member!) who moved without sending the club a change of address.

Buckmaster and the Callbook both get their data from the FCC. The Callbook may be slightly better because they do enter any corrections they may receive. I believe Buckmaster just uses the straight FCC list.

As part of a project of mine, I would like to construct a remote control switch that operates on principles used by garage door openers and car alarm systems. I was hoping that some of you might have personal experience in radio circuitry that would be willing to give me a few pointers, or refer me to some practical technical text on the subject. I need to make this thing from scratch for use as a part of a demonstration. If you can help me, please send me some e-mail. Thanks in advance.

Some of their scanners are made by Uniden, such as the PRO-35 and PRO-46. Most of their scanners are made by GRE. After having oned many Uniden scanners and several GRE/RS scanners, I think that GRE makes the better scanner. Two of the most popular scanners (PRO-2004/2005/2006 and PRO-43) are made by GRE.

I believe it was Shaw who said something like: "Britain and the
U.S. are two countries separated by a common language".

They are also separated by the fact that Brits always write
their dates backwards! :-)

Right. SO everyone take a lesson and write "9 Nov 93" or " Nov 9, 93"
or, for those who love numbers, 9.XI.93 or 93.11.9.

Then you won't be reading stuff like this!

Powersonic makes a nice dual-rate charger, the PSC-12800A.

There is a local company that sold me one of these for $33.
They will ship out of state, but the actual cost depends on the
weight and distance, but should be $3-$4.50. They are:

Klaus Radio
3103 Research Rd.
Champaign, IL

(217) 356-1896

They also sold me a Powersonic 12V 7.0 AH gelcel for $22,
about the same as Mouser.

Some background info:

Battery charging: (Powersonic info)

Cycle Applications: Limit initial current to 0.20C (C is the nominal
A.H. capacity of the battery). Charge until battery voltage (under charge)
reaches 2.45 volts per cell at 68 F (20 C). Hold at 2.45 volts per
cell until current drops to approximately 0.01C ampere. Battery
is fully charged under these conditions, and charger should
either be disconnected or switched to "float" voltage.

"Float" or "Stand-By" Service: Hold battery across constant
voltage source of 2.25 to 2.30 volts per cell continuously.
When held at this voltage, the battery will seek its own

current level and maintain itself in a fully charged condition.

Battery Chargers: (Powersonic)

"F" series: float chargers - constant voltage 2.25-2.30 volts per cell.

"A" Series: Automatic dual rate chargers sense battery requirements
and automatically switch from teh fast charge to float mode, or
vice versa. LED's provide visual indication of the charging mode.
Automatic chrgers combine the advantages of float and cycle
chargers; recharge time is short yet batteries are safe from
being overcharged. This charger is ideal for cyclic
applications where recharge time is critical and the battery
may be left on charge indefinitely. As a result charging
is fool-proof.

Powersonic chargers usually sell for $35 (for 300 ma) to
$42 (for 500 ma). However, their newest charger is 750 ma,
and sells for $38 from Mouser. I think it is $47 from Allied.
Unfortunately these are back-ordered. It is the
PSC-12800A. The "PSC" stands for "powersonic charger",
the "12" stands for "12V", the "800" stands for current
(800 ma, but really 750 ma), and the "A" stands for the
series - "A" series.

They also make:
PSC-6250F
PSC-6300A
PSC-64000A
PSC-12250F
PSC-12300A
PSC-12500F
PSC-12500A
PSC-12800A
PSC-124000A
PSC-12-10A

2A-6A sounds like too much current for a 2.3 AH battery.
I think in general you shouldn't charge at more than
.2C, so that would be 400 ma or so. The PSC-12500A,
or PSC-12300A would probably be better choices.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:
: In article <9311081152.AA32868@swmis> P.Lucas@mail.nerc-swindon.ac.UK writes:
: >The characteristic impedance of a line is given by the formula
: >
: > Zo = 138Log (d2/d1)
: >
: >where d2/d1 is the ratio of the respective diameters of the inner and outer
: >elements of the line.

: That formula will work for *air dielectric* lines, but isn't correct
: for the more common cables with solid dielectrics of various values.
: There's no easy way to determine the dielectric constant of a cable
: by simple inspection.

: You can attempt to measure the inductance and capacitance per unit
: length and apply the formula

: Zo=sqrt(L/C)

Hmm--we're onto something here folks. Let's have a closer look. I
assume it will be easier for people to measure C than to measure L. In
addition to Zo=sqrt(L/C), the time delay is given by T=sqrt(LC). For
a given impedance cable, the Zo thing tells us that L/C is a constant.
We also know T for air-dielectric cable: in fact, LC is a constant
for an air dielectic cable, independent of its impedance. If T is the
time delay per unit length of a line, and To is the time delay per
unit length of an air (really, vacuum) insulated line, then T = To*sqrt(Er)
where Er is the relative dielectric constant of the effective line
insulation. The one other thing we need (which someone else already
posted) is the impedance of the line from the geometry and the relative
dielectric: Zo = 138 * log(d2/d1) / sqrt(Er).

If I worked through the math right, then

Zo = sqrt((To/C) * 138 * log(d2/d1))

So, if you measure d2, d1, and C, you should be able to determine Zo.
Of course, Er can also fall out of this, as can T and L.
Remember, C is in capacitance per unit length, same length that To is
in terms of. To would be 1.0167 nanoseconds/foot, or equivalently
3.3356 nanoseconds/meter. If you use To in nanoseconds/length, then
use C in nanofarads/length, if you want Zo in ohms. I don't know for
sure, but if the (center) conductor is stranded, you probably want to
use a diameter very nearly the diameter of the circle that can contain
all the wires... Make sure you measure C at a low enough frequency
that the line is an insignificant fraction of a wavelength.

BTW, if the dielectric is solid polyethelene then 1/sqrt(Er) should be very close to .665, and if the dielectric is solid Teflon, then 1/sqrt(Er) should be very close to .690. The foam dielectrics and the spiral wrap (like RG-62/U and Belden 9914) are the tough ones.

From memory, the ALERT LOCK selects between two behaviors:

a. The NOAA alert signal causes a siren racket until you press the WEATHER button.

b. The NOAA alert signal causes a siren for a few seconds -- as long as the radio is receiving that NOAA alert signal. I *think* that you then hear the announcement, just as if you had pressed the WEATHER button.

The siren generator in mine could easily be disabled internally, but there is no external switch to do that. Why not go down to a radio shack store and look at the schematic - in my radio it is included with the radio?

4117. NMO Help

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-09 22:08:40 UTC
From: ksmith@theodolite.ae.calpoly.edu
Message-ID: <1993Nov9.220840.2402@cs.yale.edu>
Source record: 274493

Yesterday I ordered two NMO mounts (Larsen) and 1/4 wave whips (2m/440, black, Larsen) for my 1990 Isuzu Trooper since I've grown tired of mag-mounts and am ready to bore holes.

Anything I should look out for? I've got a friend at the local county communications shop who's agreed to help with the install, and his plan is to use the Motorola bit without removing the headliner. The headliner is a one piece deal that looks like it would be impossible to reinstall, so I'm definately up for not removing it if at all possible. He seems to think he can fish the cables from the holes in the roof.

I'm planning to take the cables down the column between the front and rear passenger doors on the right side, fishing them out the bottom near the seat belt retractor. Has anyone done this, and is there anything to watch out for (dome light wiring, etc?)?

Post or reply via email, either is fine.

4121. Antenna Restrictions -- again!

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-09 23:50:49 UTC
From: btoback@netcom.com
Message-ID: <btobackCG90wq.Fq0@netcom.com>
Source record: 274500

I'm considering buying a home in a PUD (planned-unit development) that has a deed restriction on antennas. (The restriction is part of the CC&Rs.) The antenna restriction forbids _any_ antenna that is higher than the roofline of the house.

I'd normally assume that I'd be out of luck, but for one thing: about half the houses in the development do have TV antennas that are above the roofline -- on masts, etc. The homeowners association appears to be alive and well, since the common facilities are properly maintained. Since the CC&Rs don't differentiate among types of antennas, and since a bunch of houses have antennas that are clearly in violation of the CC&Rs, how does that affect my ability to put up a ham antenna? Obviously, I could put up a TV-style antenna and nobody would know the difference. But I'd like to put up an HF beam, and ideally, I'd like it to be tall enough to be useful.

So, two questions: first, has anyone run into this situation -- of unenforced antenna restrictions, at least before the appearance of a ham antenna?

Second, has anyone tried the much more risky scenario of trying to get permission rather than forgiveness? I could send a letter to all members of the homeowners association before I actually bought the house telling them of my intentions and seeing if anyone complains. I could even send them all certified mail, return receipt requested, but that would almost certainly scare a bunch of people into saying "I object!" on general principles. If you've tried the permission scenario, how did you go about it?

Thanks,
-- Bruce Toback
KN6MN

(P.S.: CC&R = Covenants, conditions, and restrictions.)

4123. Bay area 440 repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-09 23:59:46 UTC
From: phr@netcom.com
Message-ID: <phrCG91Bo.Aw6@netcom.com>

After a few months absence I'm back on the air a little bit with a 440 MHz HT, currently in San Jose. I mostly use the thing for simplex communication but sometimes use a few of the local repeaters for longer range. I'm interested in joining a repeater club in order to help support a machine and also to be able to make the occasional autopatch phone call while mobile (not often enough to make a cell phone worthwhile). Anyone got any suggestions? The repeater should have good coverage of the south and east Bay areas including Berkeley (several of the Los Gatos machines qualify), have autopatch, and have dues that are not too high. Also, it should be an open machine. I would be willing to put a little (not much) time into equipment maintenance, programming, etc. if that helped, and would generally be a very light-duty user. Surprisingly, this info of thing doesn't come up very often on the air.

Thanks/73,
Paul Rubin WA2QYN/6

My two boys took their tests on 15 Sept and received them on 1 Nov: 6 weeks 5 days.

Making some very gross generalizations, the 10-year license term means that approximately 6% of the hams listed in the Callbook are dead. How many surviving next-of-kin actually think to tell the FCC that the owner of a given call no longer needs it?

Of course, once the Health Security Plan is enacted, the FCC will simply monitor the new National Health Records System (Title V), so the problem will go away. :-(

>This is like saying that given the millions that all these OMs spend on
>Yaesu, ICOM, and Kenwood equipment, it is absurd to think that all hams
>can not afford new TS-50s.

Is it? This is a leap of rather a large order. If $15 is keeping
someone (even a child) out of the hobby, they have much worse problems
which they should deal with ASAP, and get their lives into order.

>Think.

I am. Hell, I made $20/week back in the 60's, as a 12 year old. I
had a good sized newspaper route. Has the economy collapsed utterly?
Why do I see so many kids wearing $100 sneakers?

Americans talk a wonderful line about self-determination, go-getting,
and the wonders of the free market. Then they turn around and moan
about paying pocket change for a license. Wake up you WANKs, the rest
of the world thinks of you as whiners.

regards,
Ross ve6pdq

>actually dead, not merely relocated.

Wayne's right. The median age for US amateurs is still in the mid-50s.
That means there are a bunch shaking hands with the grim reaper every
year. The FCC doesn't normally purge their database even if they are
notified of the death, rare, and with 10 year licenses there can be
amateurs listed who've been dead a long time. Worse, there are bootleggers
using dead men's calls, and living ham's calls for that matter. I recently
received a bunch of QSLs for 20 meter CW contacts I supposedly made. I
know that's the work of a bootlegger.

>So here are my questions:
>
>1. Does it help a lot to use something like the Buckmaster CD ROM in place
>of a printed call book, or do a lot of addresses still turn out to be
>wrong?

No it doesn't help. Both get their information from the same place, the
FCC database. The problem is that people don't notify the FCC when they
move, or die. Many hams don't even realize they are *required* to notify
the FCC when they change mailing addresses. Of course the most recent
edition of either the paper or computer callbook is of some help in that
it has a list of more recent licensees, and does have any address changes
for older hams that the FCC has received.

>3. Suppose that an amateur doesn't even know that his call book address is
>invalid. How can I or anyone else let him know, if the whole problem is
>that the guy can't be reached? Maybe the League should share the last known
>address for ARRL members, but that sounds like a lot of work.

It also wouldn't be a popular idea with some League members. Divulging
mailing lists is a sore point with some. They consider that confidential

information. It wouldn't be surprising if a large number of amateurs didn't know whether their callbook address were correct or in error. Take me for example, I haven't bought a new callbook since 1967. I recently bought the SAM database, and my address is correct, but between 1968 and 1992 I have no idea whether the callbook was printing correct information or not.

>4. Does anyone have any golden advice about how to proceed in such
>situations?

It depends on how desperately you want the QSL. The first step of course is to confirm the address during the contact. This is where an online database can be handy, though just keeping the callbook next to the rig works too. Ask for the correct address, or read them the callbook entry and ask for confirmation. Note, however, that many hams do not QSL. So even if the address is correct you may still not get a card. They may *say* they'll QSL during the contact, but they may not mean it. Sending a pre-addressed, pre-filled out QSL with a stamp on it will often get a reply. If you are a serious collector of postal cards, you'll have a supply of fill in the blanks cards for this purpose. I QSL only sporadically, and only for certain kinds of contacts such as satellite contacts. Sending me a prepared card to drop in the mail is much more likely to get a response if we've chatted on HF.

If the contact has come and gone and you learn you don't have a valid address, consult the various online phonebooks. The phone company is a much greater stickler for keeping current information. If you find several people with the same last name in the contact's area, call them. The odds are they may be related to the ham and may have the correct address. If that doesn't work, try the credit bureau. For a fee they can turn up the address of anyone who has a credit history. As a last resort, contact a skip tracing firm. Most bail bondsmen can refer you to a good one.

The best thing to do is to realize that you aren't going to get 100% returns no matter what you do. Just relax and enjoy the contacts for what they are, a chance to chat with a distant stranger over the radio.

4128. Re: question about Rohn 25 tower sections

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-10 02:46:18 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1993Nov10.024618.20401@ke4zv.atl.ga.us>
Source record: 274506

I've covered this before, but I'll repeat the highlights. Using old
tower is potentially dangerous so follow inspection procedures carefully.

In article <9311091428.AA24964@wa2cjt.wellfleet> ginsburg@wellfleet.COM (Scott Ginsburg)
writes:
>
>I have the opportunity to pick up 4 10 ft sections of Rohn 25 tower for $100.

>no house brackets, no guys. The seller told me the tower has had 2 men
>on top with no problem, and it lived through 2 hurricanes during the 7
>years.
>
>My questions are:
>
> 1. What are the chances that the bottom section, or any other
> sections were weakened enough over 7 years to yield the tower
> unsafe given the lack of secure installation?

The two greatest concerns are that the tower has been damaged by excess
stress, and that the tower has succumbed to corrosion over it's 25 year
life. Only careful inspection will tell you. The fact that it was used
at 40 feet isn't of much concern, but living through 2 hurricanes may
be, as is having two men on top.

> 2. What signs can I look for that will indicate damage?

Look for any twist. Flip the sections over on a level floor. The
section should lay flat. An 1/8th inch deviation may be acceptable,
1/4 inch is a definite sign of trouble. Inspect the Z bracing. The
welds should be sound and the braces straight. Look at the end stubs.
The stub should be straight and round, the holes shouldn't show
distortion. Of course throw away any old bolts.

Look carefully for signs of corrosion. A few spots of light surface
rust may be OK, but any indication of heavy rusting, inside or out,
is cause to discard the section. Run a rag through the inside of the
tubes. Look for rust on the rag, and shine a light down the cleaned
bore. There shouldn't be any pitting. You can have a tower re-dipped
to restore the galvanizing, but the metal has to be sound underneath
or you're just creating a good looking death trap.

If you really want to trust your life to the tower, use Dyechem or
Magnaflux inspection methods to detect any concealed cracking. I do
a full inspection on even *new* tower sections, and I've sent a few
back. It's my life that's at risk.

> antenna.
> Adv: - Single antenna on vehicle
> Dis:
>In pricing the two options, the cost for each setup would be
>about the same.
>Any additional information on the above would be appreciated.

The tradeoff with a duplexer and dualbander versus two single band
antennas centers around whether the losses in the duplexer and
dualband antenna are outweighed by the superior mounting, and lack
of interference to the pattern by other nearby antennas. IMHO, the
duplexer/dualbander arrangement is usually the winner. The interaction,
and poorer mounting locations of the two antenna approach is usually
a worse problem than the losses in the duplexer and dualbander. That
assumes an ideal center of top mounting for the dualbander. If you're
going to fender or deck mount the antennas, the difference becomes
moot.

SB SAREX @ AMSAT $STS-58.025
SAREX Keps & Update: 10/28

Thursday 10/28/93 @ 08:00 UTC

The last school group contact was completed yesterday. The Portsmouth HS in Portsmouth, New Hampshire had a telebridge contact using stations in California (Ralph Warner, N6MNN) and Texas (Bob Douglas, W5GEL). The students asked 5 questions during this bridge contact.

Hams across the U.S. and around the world continue to work the Shuttle Columbia on both voice and packet. Moreover, the completion of school group contacts has cleared several school backup passes for possible general QSO opportunities. While the SAREX Working Group cannot fully guarantee availability, there is a high probability that the STS-58 crew will be ready to take general calls over the continental U.S. on these passes. Two of these "scheduled" passes remain. These include orbit 178 at MET 11 days 1 hour 42 minutes (10/29 at 16:35 UTC) and orbit 192 at MET 11 days 22 hours and 29 minutes (10/30 at 13:22 UTC). Please note

that the astronauts operated voice during yesterday's "scheduled" pass which occurred on 10/27 at 14:59 UTC (Orbit 145). Also note that hams on the ground heard or worked the Shuttle Columbia crew on several other orbits yesterday.

Element set GSFC-031, generated by Ron Parise, WA4SIR, is the official SAREX set for today. Please note that there is only a six second difference between element set GSFC-025 (released two days ago) and element set GSFC-031.

STS-58
1 22869U 93065A 93300.17699070 0.00133671 99048-5 24183-3 0 318

4131. help with different TH28A modifications?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-10 03:56:21 UTC
From: snorris@trumpet.aix.calpoly.edu
Message-ID: <1993Nov10.035621.112328@zeus.aix.calpoly.edu>
Source record: 274459

I have read the mod file that is posted on ham.eetech.mcgill.ca but this file includes additions by three different people, each with different modifications. Can anyone who has recently bought and modified a Kenwood TH28A shed some light here for me and verify any of these mods? All I want is extended recieve from 400-520, I really don't care much about the extended transmit range. I have tried lifting one end of diode 9 as listed in the mod file, but nothing happened...the radio acted as if nothing had happend. Can anyone help me here?

I prefer E-mail: snorris@trumpet.aix.calpoly.edu, but I do read this group regularly as well.

Thanks,

--

Sean Norris snorris@trumpet.aix.calpoly.edu
--KE6BTE-- Electronic Engineers do it with less resistance.

4132. Handy TRANSMITS on Airband AM???

Newsgroup: rec.radio.amateur.misc

SB SAREX @ AMSAT $STS-58.025
SAREX Keps & Update: 10/28

Thursday 10/28/93 @ 08:00 UTC

The last school group contact was completed yesterday. The Portsmouth HS in Portsmouth, New Hampshire had a telebridge contact using stations in California (Ralph Warner, N6MNN) and Texas (Bob Douglas, W5GEL). The students asked 5 questions during this bridge contact.

Hams across the U.S. and around the world continue to work the Shuttle Columbia on both voice and packet. Moreover, the completion of school group contacts has cleared several school backup passes for possible general QSO opportunities. While the SAREX Working Group cannot fully guarantee availability, there is a high probability that the STS-58 crew will be ready to take general calls over the continental U.S. on these passes. Two of these "scheduled" passes remain. These include orbit 178 at MET 11 days 1 hour 42 minutes (10/29 at 16:35 UTC) and orbit 192 at MET 11 days 22 hours and 29 minutes (10/30 at 13:22 UTC). Please note that the astronauts operated voice during yesterday's "scheduled" pass which occurred on 10/27 at 14:59 UTC (Orbit 145). Also note that hams on the ground heard or worked the Shuttle Columbia crew on several other orbits yesterday.

Element set GSFC-031, generated by Ron Parise, WA4SIR, is the official SAREX set for today. Please note that there is only a six second difference between element set GSFC-025 (released two days ago) and element set GSFC-031.

STS-58
1 22869U 93065A 93300.17699070 0.00133671 99048-5 24183-3 0 318

>stuff.

You are correct. The only case that wire feeders in the shack are when the antena presents a high impeadence load and the the feeders are an half wave or a multiple half wave length long. This can be corrected by inserting a quarter wave length in the feeders or doing some stub matching some where along the line.

I have a 170 foot double zep in the back yard it works great with a tuner. I just need to get it higher. it is only 20 foot at the center and about 3 feet at the ends.

no surely not, it is not logical, ascending order or decending order
i.e. DDMMYY or YYMMDD but MMDDYY, no.

Now I would accept MMDD or DDMM with no year but not MMDDYY.
Perhaps 5 November or even November 5 would be sensible.

Mike

4139. Re: Fun with Radio Shack

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-10 12:38:57 UTC
From: peter@3com.com
Message-ID: <2224@bridge2.NSD.3Com.COM>
Source record: 274521

I went in to my local "shack" yesterday, to buy a pair of F barrel connectors. The guy rang up my order, asked me for the customary four digits (I always use my work phone number and address), called me by name once he found I was in his data base, and....

...asked me if I had one of their new catalogs! I answered, "Noooo..." (wondering if it would cost me). He typed in some part number or other and I was watching very carefully to see if the total increased by $3. It didn't! He did tear out the $3 coupon.

Now, maybe it's just this guy, or maybe the Shack is beginning to think that the $3 catalog wasn't such a good idea. I don't buy the argument that a lot of the catalogs used to go in the trash. It used to be that the stores got one shipment, and they handed those out only on request. They don't mail them out...at least, they never mailed me one. I suspect the guys behind the counter wouldn't give them out like candy, since they know they only have a limited number for the whole year.

Cheers,
Peter (who thinks the Shack isn't such a bad place)

This would almost definitely not be a popular idea. However, the fact of the
matter is, ARRL DOES in fact probably have the most up-to-date info available
for hams. How you ask? Simple. The Incoming QSL bureau sends foreign cards
to US hams. Where do they get their information?
Answer:
1. US Callbook (most recent one available)
2. Buckmaster
3. From the ham himself! Normally, the ham wants the
bureau to know where to send his foreign QSL cards.
4. From the US Postal Service! When the sorter sends out
cards to an invalid address, quite often, it will
get returned, but with a "forwarding address expired"
tag on it, WITH the new forwarding address!

How does this help us, the hams? Well, I believe ARRL sends this type of
information to the US Callbook so that the next edition is more up-to-date.
I KNOW I send the data to US Callbook (I'm one of those volunteer sorters).
And of course, ARRL has the data in their "database"....'course that
"database" may be spread out among 260 different individuals spread out over
the entire US....so that may not be too helpful.

:-)

>In the process of looking at dual band (2m/70cm) mobile radios, I have
>observed some radios come with one antenna lead for both bands,

It has a built in duplexor.

>1. From a two antenna lead, run separate coax, mount two single band
> antennas on the vehicle.
> Adv: - Each antenna tuned for a particular band

Also, you can optimise your antenna selection: I have used the
cross-band repeat function of my Alinco DR-590 on several occaisions
where I was close (relatively) to my truck, but the repeater being
used for the public service event was pretty far away. I left the
1/4 band 70cm antenna in place, but unscrewed the 2m antenna and
replaced in with a hefty gain antenna (that I don't like to drive
around with all the time because of its length). Used either my
IC-4AT or the 444 side of my DJ-580 for the input. Worked so well,
other hams along the route began using my "portable repeater" to
reach the net control too.

> Dis: - Two antennas on top of vehicle
> - Two coax runs required

I never felt like two coax runs was a disadvantage: my bet is that
I can loose half my antenna system and still be on the air!

>2. From a two antenna lead, run into a duplexer, run coax to dual band
> antenna.
> Adv: - Single antenna on vehicle

Okay, until something whacks it. :-)

> Dis:

Contrary to the nest statement, I found I could put up two good
antennas cheaper than I could buy a good dual-band antenna and
a good duplexor! These things are pricey items for equivilent
gain, design, quality, etc. compared to the single band ones.

>In pricing the two options, the cost for each setup would be
>about the same.

See my note above.

As another 411 (unadorned) owner, I have to come down on the intermod
side. My factory 411 has the encode/decode, but does have intermod
problems occasionally (usually at Ham-Fests where there's more RF
flying than Voice of America).

Good point, David. As the DXers among us know, most of the rest of the
world writes dates in dd/mm/yy or yy/mm/dd format as opposed to the
mm/dd/yy format used in the U.S. Even here at work our International
Switching Systems Business Unit folks usually don't use the mm/dd/yy format
for dates to be consistent with their customers, all countries outside
the U.S. This confuses some folks. But, what the hey, 24-hour time
confuses most folks in the U.S., but is commonly used in other countries.

With the dd/mm/yy format, it sometimes is difficult to locate a log entry when
receiving a QSL card if you aren't familiar with the dating method. Using
the Roman numeral for the month is not uncommon on foreign QSL cards as
you show above. Now, some dates are not confusing. When one sees 24/6/93,
one realizes it is June 24th. On my QSL cards I always note the date using

letters for the month, e.g., 11 Nov. 93.

We already talk meters (metres) and 24-hour time. Might as well get on the international practice of writing dates, or at least make it clear which is the month. I actually like the Roman numeral format, but don't use it. Of course, some QSL cards have the / / already printed, so if that were the case, I would use Roman numerals.

..skip all the other article stuff...

This may be a bit flip for such a serious thread (I've had stuff ripped off, but not ham radio equip...I did "misplace a speaker mic at a Ham-Fest once), but it's at least entertaining.

I've got a Yaesu FT2400H, with the alphanumeric display. One ham buddy of mine suggested I program the alpha display memories as CB channels, so thieves (presumed to be non-hams) would think the thing is a CB and try to use it. Program channel '19' (good-buddy) as the QTH repeater. Of course, when you hear the thieves do the "breaker 19" thing on your repeater, you just say "hey, can I get an eyeball on you at...", then call the cops to meet them at that place. Or just keep them on the air and get your fox-hunting equipment out, and lead the cops right to them...

Interesting premise, but a waste of a neat feature of the 2400.

>Is it possible to modify a standard TV antenna (coax) to handle 2 meter
>xmit/rcv? I assume this would require a balun at the least...

Yup, I'm in the process of doing this now. I'm not sure what exactly you mean when you say "standard TV antenna", but I'm doing this to a rooftop-type TV beam, which started life as a log-periodic. It's now a Yagi.

The problems occur when you decide to transmit through what is a receive-only antenna. If you feed it with coax, you'll need to somehow match the 50-ohm coax to the ??-ohm antenna to get a decent SWR, and you'll need to figure out how to do a balun. The TV balun will probably fry if you put any kind of wattage into it, and it's for 75 ohm coax with F-connectors.

2m would probably work ok on a full-size TV log periodic, once all of the above is taken care of, since the VHF TV bands straddle the 2m band, and log-periodics have continuous coverage from their highest to lowest freq.

I decided to rebuild mine entirely, as I said it's now a 5-element Yagi. I'm working on the balun/matching device now. I'm going with a 1/2-wave coax balun and a hairpin match, after playing for several days with a gamma match without much success. See the antenna handbook for details of these.

Assuming the point is to have a 2m antenna, rather than the object being
to modify an existing antenna, why not get a design (somewhere, ARRL handbook
if nowhere else), by the boom feedthroughs and brackets from say Rutland
Arrays (advertise in QST, Tom says he sells the hardware if you want it),
buy some 6061 Al tubing and rod from your local metal tubing supply
store (big cities only)and then you're at the point ofthe proevious writer
above and put the hairpin on it. It's not trivial, but I imagine
it's no harder than doing major surgery on an existing antenna.

Or what you could do is use coax from your rig to the outside of your shack
and then use a 1:1 current balun to interface the coax to the ladder line.

I agree with Howard. I use a single, 65-foot long dipole on all bands from
80 through 10 meters using an open-wire feeder. It works like a champ
with little or no RF in the shack. The difference in transmission line
loss between open-wire line and coaxial cable is VERY impressive--
especially under high SWR conditions (which tend to occur when you
feed an antenna at nonresonant frequencies).

Open wire gets a bad rap as being difficult to work with. This is not
true in many circumstances.

>1. Does it help a lot to use something like the Buckmaster CD ROM in place
>of a printed call book, or do a lot of addresses still turn out to be
>wrong?

the callbook and CD rom folks both start at the same place - the FCC records. i think the callbook folks were taking reports of changes in QTHs and revising accordingly. the CD rom folks are going to take the FCC data and reproduce it with a minimum of editing.

i think there are a fair number of SKs in the listings, but by far the biggest errors seem to be people that move without notification to anyone else.

heck we even had a kid pass a novice test and his licensed grandpa comes back something like 6 months later complaining how we lost his application. turned out the kid and his folks moved the next week after the exams and didn't forward the mail (this seems exceedingly dumb, but i suppose some reasons probably exist for doing this). The FCC had sent the license to the address given at the time at the exam.

a while back i compared the callbook data versus the internal employee lists we've got here (everyone gets a roster... lists address, spouse name, phone number...) and found about 20% of the ham folks were out of date on addresses -- did let the folks involved know, and i think now everyone is up to date (and I keep a small stock of 610s in the file in the radio shack upstairs too).

these aren't no codes folks. these folks just didn't bother to notify the FCC of the address change.

of course, the FCC wants everything on a 610 - that could be a stumbling block since when you move you have to send out a bizillion post cards to everyone as well.

if W2NSD wants to complain about addresses being out of sync at the FCC, maybe he should run a column where he compares FCC data against his licensed subscriber lists and print the results for all to see.

Maybe a "QTHs Lost and Found" column in 73. or a Lost QTH Server on the internet or something....

btoback@netcom.com (Bruce Toback) writes:

>I'm considering buying a home in a PUD (planned-unit development) that has
>a deed restriction on antennas. (The restriction is part of the CC&Rs.)
>The antenna restriction forbids _any_ antenna that is higher than the
>roofline of the house.
.... etc

I suggest you get permission to put up whatever antenna
you want BEFORE you purchase the house. You could even put
in the purchase agreement something along the lines of
"purchase offer contingent on receiving permission from xyz
homeowners board to put up a Cushcraft A3S amateur radio
antenna on 35 feet of Rhon 25 tower". (See a lawyer about
the exact wording you want.)

You need to go after the board members that make this
decision, not the homeowners in general. Getting this
in the purchase agreement gives the present owner some
incentive to assist in getting permission.

Now as to my situation----

I live in a 225 home development and we have CC&Rs. Nothing
about antennas, but "permission required for any structure"
specified in CC&Rs. Some houses have TV antennas. I bought
the house before I became a ham. My wife and daughter are
also hams. I put up a Cushcraft R7, a 22 ft vertical and I
mounted this on about 16 feet of pipe. I used this for about
a year and a half.

A few RFI complaints but no complaints from homeowners board.
I was really helpful about RFI, buying toroids and such and
working to solve problems for neighbors. I also got on the
homeowners board soon after moving in and before I became a ham.

A couple years ago I became vice president of the homeowners
board. I also try and be super nice to my neighbors. One
neighbor beside me had some RFI in the TV. They had the TV
at end of house closest to me and used "rabbit ears". I bought
an outside antenna for them and installed it at the far end
of their house and ran coax to the TV. Gave them a much
better picture and cured the RFI problem. They are happy.
Cost me less than $50, trivial compared to my total investment
in ham radio equipment.

Last year I put in a tower. Fifty feet of Rhon 25, with mast, tri-band beam, and VHF antenna plus VHF/UHF mast on top. No permission asked -- my wife convinced me it was easier to ask forgiveness than to ask permission.

No problems for a while, then I find that board has received some anonymous compliant letters. They don't typically act on any unsinged letters. Complaints were about RFI and also how ugly, out of place, etc. the antenna was. Interesting to note that the letters complained a lot but didn't actually ask for any action such as having the antenna come down. The board shared the letters with me but didn't call for action so I didn't volunteer any action.

I did sent out a letter to all nearby neighbors stating that I had heard that there were some RFI problems and that I wanted to be a good neighbor and would work to solve those, even supplying an RFI-proof telephone at my expense if necessary. I also included two pieces of literature from the FCC about RFI. I had my lawyer check all this out before sending. BTW, I did install a couple filters on phones, and a couple torroids on stereos but never had to buy a phone. (AMIDON FT-270 torroid works great right at the stereo with the speaker leads wrapped around it.)

I gave a copy of this information to the board, plus a study on antenna height and effectiveness, plus a study about home sales price and proximity to ham antennas.

This situation sort of simmered for a while, and after a few months the board President and past vice president asked to meet with me. I showed them the FCC rule book and pointed out the section stating that only the federal government could regulate radio transmissions so they had no authority over RFI. I said that this was just an antenna like any of the TV antennas and so no permission was required for it. I also pulled out the CC&Rs and pointed out the clause that states that if no action is taken within 30 days regarding construction that permission is then given. I stated that no action had been taken in 30 days and therefore I considered permission to have been given. They said OK and dropped the matter.

Now remember that I was on the board and well liked by the board members and also well liked by most of my neighbors. If no one liked me things probably would have been different. This still made for a tense situation. I put up with all this because the beam really makes a big difference to the hobby! I know that some people would view me as a real shmuck for putting up something that reaches almost 70 feet in the air (if you count the dual band vertical on top) when the CC&Rs say permission is required for a structure. Well this may be the case, but the tri-bander is only 55 feet up and the thing seems to get shorter with age. I keep the house and yard neat, and

try hard to be a good neighbor. The bottom line is that the
beam and tower were worth the hassle.

If I had been a ham before purchasing the house things would
have been much simpler. In your case I suggest getting permission
before the purchase.

73, Dale

Hello:

The wires on the speaker/mic connector came loose and I need to reattach them. I have tried to work through the proper connections on my own but have not been able to arrive at the correct solution. If anyone has the schematic for the proper connection I would appreciate it very much. I would also like to find a service manual for this Tempo S5.

Thanks Larry -- KC5CVL

4159. Ladder Line (was: 80m on 20m dipole)

>>loss it is likely to put RF in the shack. The only way to fix this is

>This has not been my experience. I say the benefits of open wire/ladder line
>far outweighs its disadvantages. There seems to be a lot of fear about this
>stuff.

Yes, fear of the unknown. Ladder line is very mysterious stuff and comes
from the dark past. Days of beeswax and dirigibles, ozone and wobulators,
black magic and witchcraft. Few hams these days have any idea of how to
get this strange and awkward wire from the outside of the house to the
inside. There are rumors and folklore about what may happen if the stuff
should so much as come near a non-noble metal or perhaps run the same
course as another conductor. The dreaded "RF in the shack!" may cause
lighting to dim and waver. Solid state rigs may chatter their relays
while their digital displays go crazy and all the LED's wink on and off
as the daemons released by the ladder line play with their logic.
If you do decide to tempt fate and fool with the Devil, do not succumb
to the modern 1" plastic 450 ohm line. Only real, handmade 600 ohm
ladder line with solid copper #12 conductors space 6" apart using oak or
ash spacers dipped in beeswax will appease the spirits of the ether.
You must then hang this line straight down for exactly one quarter wave
length from the cockpit of your dirigible where it shall be connected to
a real wobulator with tickler coil wound on glazed porcelain. At the
lower end of the ladder line connect a one half wave length of Litz wire
to one wire only. The other wire of the ladder line must remain free
and unconnected for the spirits to use. Now fly your dirigible fast
enough that the Litz wire trails straight back but not so fast that the
ladder line may become bent and not hang straight down. Activate the
rotary spark gap and begin pounding the dime sized silver contacts of
your key. Enter the realm of the shadow world.

1202 29000 402 54% 139 590.5 49% 0.02 0.8% rec.radio.amateur.space
2025 15000 200 30% 121 153.0 0% 0.00 0.4% alt.radio.networks.npr
```

2111 13000 179 31% 9 6.2 22% 0.00 0.3% rec.ham-radio.swap
2128 13000 175 32% 4 4.3 0% 0.00 0.3% rec.ham-radio
2205 11000 155 28% 11 11.5 9% 0.00 0.3% rec.ham-radio.packet

Several positive trends continue this month. Readership is up
dramatically in all active newsgroups (closely following Usenet's
predicted exponential growth patterns). The two top newsgroups,
rec.radio.amateur.misc and rec.radio.shortwave, are roughly tied, as
as they were last month. Other newsgroups with extremely strong
showings are rec.radio.swap and rec.radio.amateur.policy (meeting their
respective goals of keeping for-sale messages and extended legal
debate out of the main discussion newsgroup). Currently,
rec.radio.amateur.homebrew leads the other new rec.radio.amateur
newsgroups by a significant margin. The recently-created
rec.radio.scanner is slowly gaining in readership as well, and should
eventually overtake alt.radio.scanner, which it supersedes. It is
expected that the newly-created newsgroups will continue to grow in
readership like previously-created newsgroups such as rec.radio.info
and settle out at about 60-70% propagation. If these new radio-related
newsgroups still haven't reached your site, please ask your news
administrator to create them (refer him/her to the new newsgroup
announcements by Dave Lawrence in news.announce.newgroups or the
messages posted to the new newsgroups piling up in "junk" :-). Especially
point out to him/her that cost/per-reader/per-month is significantly
down in all newsgroups.

The defunct newsgroup rec.radio.amateur.packet has been rmgrouped as of
September 21st, 1993, and is no longer connected to the PACKET-RADIO
mailing list. Netters interested in packet-radio discussion should use
rec.radio.amateur.digital.misc and the HAM-DIGITAL mailing list.
Propagation has started to gradually drop in the old newsgroup, down
2 points from last month. There is a Usenet Request for Discussion
(RFD) tentatively scheduled for January 1994, to either reconsider the
rec.radio.amateur.digital.tcp-ip vote, merge all digital interests into
rec.radio.amateur.digital, or possibly even revert back to
rec.radio.amateur.packet. Watch news.announce.newsgroups (or subscribe
to the rec.radio.amateur Working Group mailing list at
rra-wg-request@amdahl.com) for further developments.

Note also that the defunct rec.ham-radio hierarchy reappears this month.
If the newsgroups are still active at your site, please try to persuade your
your news administrators to delete them as these groups have been rendered
obsolete (for almost 3 years now) by the rec.radio.amateur hierarchy.

Source record: 274465

I store my gel-cell plugged into a pair of solar panels in a south-facing window. They max out at about 110ma into 14V. So far, so good. Lead-acids like to be trickle-charged.

For faster charges I plug the battery into the external battery charge port on my VCR (!) and start a charge cycle.

>
You won't be sorry. I have over 20 car-years (2 cars, 10 years each) experience with NMO mounts and am still happy with them. You can get little plastic plugs from Larsen to fill the holes when you sell the car.

> Anything I should look out for? I've got a friend at the local county
> communications shop who's agreed to help with the install, and his plan
> is to use the Motorola bit without removing the headliner.

I have two Toyotas and on each, was able to remove the dome light and work through the hole in the headliner. I used a Greenlee 3/4" punch, but I understand the drill is also quite popular. Make sure you scrape the paint on the inside of the roof. I did it by tightning the mount slightly and rotating it, using the ground clamps to scrape away the paint. Then I removed the mount, cleaned the ground clamps and reinstalled it.

> The headliner is
> a one piece deal that looks like it would be impossible to reinstall, so I'm
> definately up for not removing it if at all possible. He seems to think he
> can fish the cables from the holes in the roof.
>
> I'm planning to take the cables down the column between the front and
> rear passenger doors on the right side, fishing them out the bottom near the
> seat belt retractor. Has anyone done this, and is there anything to watch out
> for (dome light wiring, etc?)?

I fished the cable down the windshield side pillar. The trim panel should be removable. I used a long piece of baling wire as a fish tape. There were access holes in the metal under the plastic trim. The wire ended up under the dash, right where I wanted it. I remember seeing a wiring harness coming down the same way.

Some other things to watch...get yourself some silicone grease and some anti-oxide lube (I used Permatex Anti-seize from an auto parts store). The silicone grease goes on the threads of the plastic cap and on the o-ring that contacts the roof. The anti-seize goes on the bottom end of the whip, the allen screw threads and the threads of the threaded stud on top of the plastic cap. Be generous with the stuff and wipe the excess off after you get it all together.

The idea is to prevent capillary action which will
suck water (here in New England, they put salt on the roads in winter) up into the threads and into the socket that holds the end of the whip. If you don't do the above, the first thing you'll notice is SWR problems and the next thing you'll

notice is that you can't undo the set screw :-) When you finally get it all loose, you'll find the end of the whip is all corroded by the water that seeped into the socket.

Do a good job waterproofing it and your antenna will outlast the car.

Cheers,
Peter

It has been said that...

> >>loss it is likely to put RF in the shack. The only way to fix this is
> > ^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

++

There will be little "rf in the shack" if the line currents are balanced
on the portion of the line which is in the shack.

Old timers may tell you that you can use a couple of small lightbulbs in
many cases to see if the currents are the same. Of course you cud use two
ammeters, but...

My wire antenna is 135 feet long and fed with 300-Ohm transmitting twin
lead. It goes from the feed point at a 90-degree angle. As it runs
through a crawlspace, I have dressed it away from any metallic objects
(by at least 10 conductor spacings).

As I use it from 80 meters to six meters I'll bet thw SWR exceeds 10:1 on
some bands.

It don't beat my tribander, but in contests it's a lot less directional.

Some call this antenna a center fed Zepp. I call it a doublet or flattop.
On 75 , I call it a dipole. On 40 meters I call it two half waves in
phase (gain abt 1.8 dB or so).

On SIX METERS, I call it a piece of luck.

Previously on rec.radio.amateur. misc we heard...

> You are correct. The only case that wire feeders in the shack are when
> ^^^^^^^^^
the antena presents a high impeadence load and the the feeders are an
> half wave or a
> multiple half wave length long.

==========

High line currents don't necessarily give "rf in the shack". It depends on how far from the line the electromagnetic waves are significantly strong. You think that if ur using coax, there's no problem. Not if the coax sees a load which causes external fields on the OUTSIDE of the braid.

A low impedance load will do what the above suggests too.

It's a good idea, but having both sold a home and sat on a board
of directors, I (and presumably my attorney) would probably reserve
the right to keep showing the home and entertaining other offers in
the mean time. Knowing that boards move slowly, I wouldn't be willing
to put yet another obstacle in the way of the sale.

>water. (Well you sometimes can with a hypodermic needle, but it's tricky.)

Good ideas! I found a charger at WalMart that is designed to be connected
all the time to a battery to maintain a constant charge. It was 20 bucks,
I use it to keep my gel-cells charged in my shack which is my main power
source BTW. If the battery drops below 12 volts the 1 amp charger kicks
in. The only thing I don't like about it is that it seems to get a little
hot, but so far it does not seem to be a problem other than making me nervous.

: >stuff.

: You are correct. The only case that wire feeders in the shack are when the antena
: presents a high impeadence load and the the feeders are an half wave or a
: multiple half wave length long. This can be corrected by inserting a
: quarter wave length in the feeders or doing some stub matching some
: where along the line.

Actually, even that would not cause "RF in the shack" unless either the
antenna system or matching network is unbalanced. Feedline radiation
and "hot" station grounds are caused by unbalanced currents on the
feedline. So long as everything is balanced, you shouldn't see a
problem.

HELP!

I need some statistics on the Amateur Radio Special Event Station run
by K2BSA at the National Jamboree earlier this year.

The big questions are: How many radios, how many bands, and how many
contacts.

The motivation is that I am writing a letter to the National Office of
the Order of the Arrow to get permission to set up a Special Event Station
here at Purdue during the National Order of the Arrow Conference next summer.
I would like to be able to quote the statistics from the Jamboree to help
support the idea.

Thanks in advance,

I agree with another reply that you should try to get permission nailed
down before you buy the house.

But for people who have already purchased a house in your situation, I
would recommend one of those mini-beams that are about the size of a TV
antenna. Probably nobody will be the wiser. For the lower bands, use
the "TV" antenna guy wires as inverted VEE's. If you use 4 guy wires, you
could load two of them up on 80 meters and the other two on 40 meters,
and feed both with one piece of coax. (Of course you will need insulators
in the guy wires at appropriate places.)

If you want to really play it safe, put up a real TV antenna and load
up the guy wires with a tuner on all bands. A totally invisible
ham antenna!

Sounds like you did a good job of buffaloing them.

In fact, however, there are two great flaws in your argument:
(1) FCC pre-emption currently does NOT affect private contracts such
as CC&R's!
(2) the 30 days was from when they received permission. I would bet
that the antenna would have to be up for at least a year before
a court would agree with you rather than them (at least, that's
what MY lawyer said when I asked about this).

Yah, I did exactly this on a Chevy S10. Take apart your dome light and look
around. I have a little bit of structural sheet metal around it (the light), so
I had to punch the hole clear of all that - about 6" forward of the dome light.
Push the coax, inside the headliner, toward the windshield pillar, snag it from
the outside edge of the headliner with a bent coathanger, and finish routing
it. Very clean, very easy, headliner remains in place throughout.

Punch the hole. I wouldn't hesitate to do exactly the same to a brand new car.
If I ever sell it (doubt it), it'll just put a little plastic cap over the NMO

Hello everyone:

A common complaint about the newer micro handhelds is the low volume audio. There is a fix to that problem, which I have applied to my Kenwood TH-78A. I use a CD Player-to-Cassette adapter (Radio Shack 12-1951), it plugs into the headphone jack of the HT and the adapter loads like a cassette into the car stereo system. With this setup one hears the HT audio amplified by the car stereo, so there is plenty of power available. Also it is possible to modify audio tone with the stereo controls.

Yah, I think if I were to do it over, I'd just buy the tubing and build it.
Drilling out all those rivets was a fair amount of work. The main reason to do
this is if you happen to have a TV antenna around that's just taking up space.
Like if you've recently gone to cable, for instance. Initial cost $0, add on
whatever it takes to get it converted (about $15 in misc hardware so far). Me,
I gave up watching TV, so...

Hmm, now where's those TV transformer rewinding posts?

Well, maybe there is a way to get more people to update their addresses with the FCC. Heaven knows, we have people who are willing to beat other requirements and regulations to death. Maybe we could jump on people who don't update their addresses instead of no-coders for a change.
>

> information.

But surely they would be wrong. The addresses of licensed radio amateurs constitute public information (which the FCC can and does share with Buckmaster et al.). If the League has some of the same information in a more accurate form, and decided to share it for the purpose of helping radio amateurs fulfill their duty to provide their current addresses, I don't see how anyone could bitch about a breach of confidential information. The issue wouldn't even come up if these licensees had kept the FCC up to date, as was their responsibility. Of course, whether the League would have the resources to do such a thing is an entirely different issue.

It wouldn't be surprising if a large number of amateurs didn't
> know whether their callbook address were correct or in error. Take me for

Maybe the League should start to publicize this issue with some sort of campaign, then. Possible slogan: "You ought to feel small if you've provided the wrong address for your call." Well, maybe they could come up with something a little better.

Thanks, incidentally, for your other suggestions.

>antenna system or matching network is unbalanced. Feedline radiation
>and "hot" station grounds are caused by unbalanced currents on the
>feedline. So long as everything is balanced, you shouldn't see a problem.

I have an odd "RF in the shack" problem on 80 meters. I am using a full-size 80 meter dipole. Fed with coax. No balun. No tuner. The antenna wire is about 35 feet above the ground. The coax drops straight down from the center to the ground and then runs along the ground about 30 feet to the basement window. The "hot" end of the dipole runs about 10 feet away from the house along the side of the property from a pole in the backyard to a tree in the front yard. This puts a good portion of the antenna wire almost 35 feet directly above me. This may be part of the problem.

Anyway... Right now the dipole is tuned for 1:1 SWR around 3800. Anywhere from about 3700-3900 the SWR is below 1.5:1, however I have severe 80 meter RF getting into everything in the shack. If I go down to the CW part of the band the SWR goes up over 3:1, but ** the RF problem goes away ** !! ??

This is all with a tube transmitter so it is not any kind of high SWR power fold back kicking in. Runing same power in both parts of the band. I can't explain it. You would think that any feedline radiation, etc, would be worse if the SWR was higher.

I was thinking of adding a balun but I am not convinced that it will do much good. Any Ideas?

Steve Bass writes:

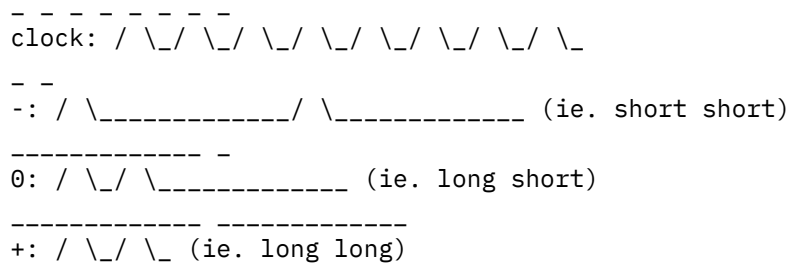
> As part of a project of mine, I would like to construct a remote
> control switch that operates on principles used by garage door
> openers and car alarm systems.
>
> Steve Bass
> sbass@fc.hp.com

I just finished playing around with one of these and wanted to post what I'd learned to the net but wasn't sure whether anyone would be interested. Obviously, someone is, so here's the garage door info file:

I recently reverse-engineered the transmitter half of a simple garage door opener. My intent was to increase it's range beyond the current 30 foot maximum. I didn't figure out how to crank the power, but I did learn a lot about how they work. I haven't studied the receiver box yet.

Clock:
The circuit derives a simple 50% duty cycle clock from an RC based oscillator. Most of this logic is contained in the single IC. There are two external resistors and one external capacitor used to set the clock frequency. (Note that this clock is a digital clock and has nothing to do with producing the actual RF.)
This clock has a period of approximately 1.15 milliseconds.

Coding:
The code for this unit is a 9 digit base 3 number. It is set via a 9 place dip switch with 3 positions per switch. The 3 positions are labeled minus zero and plus. The switch labeled 1 is sent first. Here are the waveforms associated with each "digit":



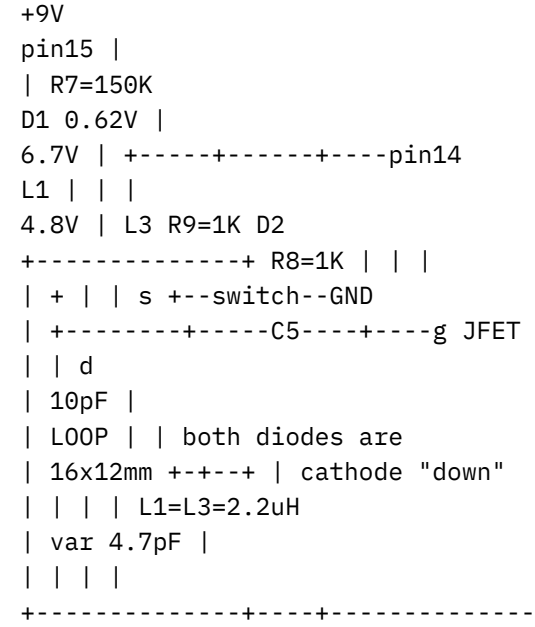
The IC reads the switch positions and produces a digital signal which is a sequence of nine of the above waveforms (one for each

switch) strung end to end followed by a long period of zero output.
The key is sent repeatedly while the button is held down.

Keying:
There are only two connections between the IC and the RF oscillator.
One of them carries the above "key" waveform and is apparently used to
power the oscillator! I don't really understand the function of the
second connection.

Oscillator:
The RF oscillator is composed of a single n-channel JFET transistor
(type 2n5486) and several passive components. It appears that the
oscillator tank circuit and the antenna have been combined into a
single unit made of a loop on the circuit board with an adjustable
capacitor across it. By adjusting the capacitor, I could change the
oscillation frequency from 275MHz (max cap) to 335MHz (min cap). Note
that most common remote units operate at 390MHz, so this obviously
isn't one of them!

At the risk of producing a monster, here is an ASCII drawing of the
RF oscillator circuit:



The voltages shown are during oscillation. I had some real
difficulty measuring the frequency of this circuit because there isn't
any point on the circuit that is a pure RF with no AC component due to
the switching waveform. I finally just coupled to probe into the loop
with a small loop on the oscilloscope probe. Pin 15 is the switching
waveform. When it's high, the circuit oscillates. I don't know the
function of pin 14. The switch is the button that activates the whole
circuit.

Anyone with ideas for how to increase the power of this unit?

The receiver is in a weather sealed box and I haven't gotten brave enough to open it yet.

^^

Ha! Have you ever tried this? They are NOT interested in your puny order
and will let you know in no uncertain terms when you are quoted the cost of
a single rod or you are brought to understand their minimum order terms.
I was quoted $80 for a small tube as an example. I now buy all the busted
and broken antennas at swap meets for their metal.

>Yah, I think if I were to do it over, I'd just buy the tubing and build it.
>Drilling out all those rivets was a fair amount of work.

Well good luck finding the tubing. I can't see what's so terrible about using
the log periodic as-is. The Radium Shack VHF-UHF special should make a great
directional scanner antenna and will cover 6 meters to 222 Mhz as well I bet.
The challenge is to come up with a good broad banded match suitable for
transmitting. I wouldn't be beyond resorting to twin lead but how do you
match at the rig end? There are VHF antenna tunas and I suppose you could
wind a serious bifilar air balun somehow.
I was disappointed with a recent ham rag article that suggested complete
disassembly of a log periodic and reassembly into a classic yagi which had
non-optimum dimensions (just like the League books).

4185. Tuning CW ??

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-11 00:16:32 UTC
From: jaevans@clark.net
Message-ID: <2bs090$3k0@explorer.clark.net>
Source record: 274461

Greetings,
I was an avid SWLer as a teen (an aspiring ham actually) and used a a few 5 tube superhets for Shortwave and CW, back when you couldn't tell what frequency you were receiving (parallax, tuning dial inaccuracy, receiver alignment, etc) - ball park was good enough.

Well, I have a fancy Yaesu 8800 with digital frequency readout which seems to be more accurate than I need. However, while tuning to CW in the 80 and 40m ham bands, It struck me that, due to selectivity (or lack thereof), fine tuning, and BFO adjustments, it is not really possible for me to know just what frequency (within the receiver's accuracy specs) the station is on. I can switch to narrow selectivity but can always get a few code stations within the bandpass.

Now, I know I should get the greatest signal at the transmitting carrier frequency, but finding that while receiving AM while the station is transmitting is like hitting a rabbit popping out of its hole.

Any suggestions out there on how I can further discriminate the station frequency?? Just a question to stir the pot and generate discussion (before I get my antenna tuned up for my first ever contact (CW on 80M).

thanks in advance,
john

Your TXing with your cellular on a dualband antenna? I should try using my 144/440/900MHz triband antenna with cellular (very high gain on 900). Cellular TXs around 823-850, will using a 902-928 antenna damage my cellphone?

>inventor]
>(1931)
>:a variable unit of data transmission speed sometimes equal to one bit per
>second

Webster's is incorrect. Most people think that a baud (not bauds, oh that sounds so bad) is the same a bits per second (bps). This is incorrect. A baud is the number signaling changes per second. FSK uses a seperate frequency for 0 or 1. Since each signal change (frequency shift) contains one bit, the baud rate is the same as the bps rate. So a FSK modem operating at 300 bps is also operating at 300 baud. With a more elaborate encoding scheme like PSK (phase shift keying), each signal change may contain 2 or more bits of information. If we are using PSK and each phase encodes 2 bits, then 1200 bps would equal 600 baud, since there are 600 phase changes per second, but containing 1200 bits of information each second.

Comming from a computer communications background, I have never heard baud refered to as "bauds" (it just sounds akward and bad). The FCC should correct this in their exams.

4188. jvfax60.zip - HF/VHF Wefax viewer with demod schematics

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-11 01:24:35 UTC
From: 374ossdow@yokota-emh.af.mil
Message-ID: <9311110124.kp23577@SimTel.Coast.NET>
Source record: 274464

I have uploaded to the SimTel Software Repository (available by anonymous ftp from the primary mirror site OAK.Oakland.Edu and its mirrors):

pub/msdos/hamradio/
jvfax60.zip HF/VHF Wefax viewer with demod schematics

JVFAX 6.0 is a multi purpose program for the reception of both weather chart and photo style fax. For radio amateurs, there is an additional transmit-option for FAX and a SSTV transmit/receive facility. Fax reception can be performed fully automated, supporting time schedule The automatic creation of weather movies is supported when receiving geostationary satellites.

Depending on the interface an intensity resolution up to 256 grey shades can be gained. Spatial resolution depends on the index of co-operation being selected and can be up to 2400 dots per line. In conjunction with an adequate interface a so called Automatic Tuning Control (ATC) can be enabled when receiving FM-FAX, which greatly facilitates the tuning process. This ATC also compensates a receive frequency drift within wide ranges.

The program can be configured for a wide range of ports and interfaces. JVFAX runs on any IBM PC or 100% true compatible and under DOS versions higher or equal to 3.0. You need at least a VGA graphics card to run JVFAX 6.0. JVFAX 6.0 supports SVGA cards in 16 or 256 color mode with different resolutions. Drivers for some 8/9 or 24 pin printers are included, and a driver for the HP-Laserjet.

Dave:

Which battery charger did you get a WalMart? The one I bought (a while back for charging automotive batteries) was the Schumacker 6/2AMP Dual Rate manual charger. I was at WalMart last weekend to pick up some antifreeze and noticed they have a 1.5AMP automatic charger for motorcycle and other smaller batteries. Is this the one you got? I noticed this one was rather small with no indicators whatever that I could find.

I saw that thing in the Radio Shack catalog and I'm really curious to learn
how well it works. I'm afraid the blasted wire will get hung in the cassette
mechanism and ruin an otherwise perfectly good Kenwood car stereo. :-)

The cassettes slide in sideways in my Kenwood, then drop down into the
cassette mechanism. From the picture in the catalog, it appears the wire
comes out of the back of the cassette, which means it'll be halfway in
the cassette mechanism -- an invitation for disaster in my opinion.

I HAD A SIMILAR PROBLEM WITH MY FT-747 WHICH COME WITH MECHANICAL CLICK
SHAFT ENCORDER.
I FIND OUT WITH MINOR MODIFICATION I CAN PUT MAGNETIC SHAFT ENCODER MADE FOR
FT-990 / FT1000 WILL FIT INTO MY FT 747GX. I ORDERED KNOB, AND SHAFT ENCORDER
FOR FT 990/ FT 1000 THEN, THE SHAFT ENCODER FOR FT990/1000 I TOOK THEM INTO
TWO DIFFERENT PIECES (CIRCUIT BOARD AND ACTUAL ENCORDING PARTS) THEM ABLE TO
PLACE IN WHERE ORIGINAL SHAFT ENCORDER WAS. IT WORKS NICE AND I HAD A FRIEND
HAS A EXACT SAME PROBLEM WITH FT 747 GX'S ORIGINAL ENCORDER, SO I DID SAME MOD.
FOR HIM AS WELL. SHAFT ENCORDER MADE FOR FT990/FT1000 IS MUCH BETTER PARTS.

Actually the clue is the FCC ID (for the receiver's Part 15 approval); it starts with AA0, the code that is used for Tandy non-computer products. Tandy designed the rig themselves and hired the unnamed Korean maker (not one known for its own brand, according to Ed Juge) to build from their drawings.

Try Kenwood America or your local dealer. he radio can be remotely controlled when in repeater mode, with dtmf on the second band, and using dtmf codes for function changes, a friend has the 741 and can do it with his nothing so crude as putting the mike on the speaker, the audio can be cross-band repeated both ways, we use his 741 for cross band linking to his 950 for 10 mtr openings and remote 40 mtr contacts etc. We haven't figured out how to control the 950 ... yet. It may require a hybrid controller of sorts. Someone on here was talking about being in remote and hearing dtmf and their frequency taking off, or the band changing. This is the function for remote control.

Sorry I can't help more, but it is in there. It may jusy be lost in the technical translation from Japanese to English. Experiment and have fun.

Lockheed Amateur Radio Club sponsors Amateur Radio
High Altitude Balloon Flight.

North Texas Balloon Project - Flight Number 5.
Pre flight update. Nov. 1, 1993.

The next flight of the NTBP will be on Nov 13, 1993 at 08:30 CDT
from an as of yet undecided launch point south of Fort Worth, Texas.

Package Data:

Cross band voice repeater: uplink on 445.80 - downlink on 147.58.
Telemetry downlink: 144.29
Digipeater: downlink on 144.29 - uplink on 145.89
Callsign for the Digipeater is W5SJZ-6.

Also on board will be a GPS satellite receiver linked to a packet
transmitter. This will allow you to tell where and how high the
package is.

A launch net will be conducted on 7155 Khz starting about 60 minutes or
so prior to launch. A local net will be conducted on 146.76 for those
in the Fort Worth area. Net Control callsign will be W5SJZ (Lockheed
Amateur Radio Club).

Reception reports are encouraged - please contact us on the HF or VHF nets.
Also, please QSL. We will be sending our QSL cards!!!

It's been my experience that you can use your cellphone even with
an open or shorted coax without damage, though not with very good
performance of course. These things seem to expect poor antennas,
after all, most people use those abominable thru the glass antennas.

Well the narrow filter will normally be setup at 700-800 Hz above the
indicated frequency. So you'll be tuned properly when the signal is of
this pitch. If you build a 750 Hz oscillator, you can match pitches,
either by ear or with a scope setup XY. This will allow you to tune very
accurately.

> that the antenna would have to be up for at least a year before
> a court would agree with you rather than them (at least, that's
> what MY lawyer said when I asked about this).

I think it is difficult to say that "the 30 days was from when they
received permission" without having actually read the CC&Rs. It may
very well be as the original poster states...having erected something
without permission AND having no action taken against it within
30 days of construction...then the permission is, in essense, automatic.
Again, without the eact wording in the CC&Rs, making such a legal
determination is difficult. In fact, as I recall, the poster said that
he had reviewed the situation with his attorney, so I'll presume
what was posted about the automatic permission after 30 days is
indeed the case.

A simple expedient is to get a length of coax (say 30 feet) and make a coil about 9" in diameter of it. Put it in the feed-line just after it enters the shack.

Often works wonders.

Actually, if one reads carefully the previous comments, he/she will note
that the European format is separated by PERIODS, not slant bars. Most
computer operating systems (Apple & IBM/Microsoft for sure) are set up
to allow either, with the proper separators. Simple rule for all of us:
If the separator looks like it is about to fall over, it's MM/DD/YY;
if it already fell over, it's European DD.MM.YY; if someone's smart
enough to use text for month name, he knows people get confused easily.

Good point, David. As the DXers among us know, most of the rest of the world writes dates in dd/mm/yy or yy/mm/dd format as opposed to the mm/dd/yy format used in the U.S. Even here at work our International Switching Systems Business Unit folks usually don't use the mm/dd/yy format for dates to be consistent with their customers, all countries outside the U.S. This confuses some folks. But, what the hey, 24-hour time confuses most folks in the U.S., but is commonly used in other countries.

With the dd/mm/yy format, it sometimes is difficult to locate a log entry when receiving a QSL card if you aren't familiar with the dating method. Using the Roman numeral for the month is not uncommon on foreign QSL cards as you show above. Now, some dates are not confusing. When one sees 24/6/93, one realizes it is June 24th. On my QSL cards I always note the date using letters for the month, e.g., 11 Nov. 93.

We already talk meters (metres) and 24-hour time. Might as well get on the international practice of writing dates, or at least make it clear which is the month. I actually like the Roman numeral format, but don't use it. Of course, some QSL cards have the / / already printed, so if that were the case, I would use Roman numerals.

73,

John, WB9VGJ

>
>I think it is difficult to say that "the 30 days was from when they
>received permission" without having actually read the CC&Rs. It may

It's not difficult at all. Because CC&R's are fairly standard in their wording and prepared from standard templates. Unless someone made a colossal blunder, the idea is this:

If the Board takes no action within 30 days after a request for an architectural approval is received, then approval is granted. This is to prevent boards which only meet every 90 days from holding up construction projects unduly. However, you can't put something up and if nobody notices in thirty days, it stands. That's just not the way it works.

Also, the Board can also take 'action' that amounts to inaction. They can deny the request pending further information. They can stipulate that your neighbors must agree. They can request drawings. Or they can just say 'no' and let you appeal.

These things are stacked in favor of the Associations.

Although this individual may have buffaloed the association VP, if the managment company is worth its salt, the property manager will point out that such is not how it works. It may well come around again.

4213. Multiple YAGIS on mast

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-11 16:21:53 UTC
From: molson@bml4380.cpg.cdc.com
Message-ID: <CGC5GI.C9t@cdsmail.cdc.com>
Source record: 274342

I've got a 2m and a 70cm Yagi on the same mast, both
vertically polarized. I originally had them spaced ~15cm
apart, and found that while the 2m had acceptable SWR,
the 70cm had > 2:1 SWR at the frequencies I wanted to use.
After fiddling around with the gamma match I found that
no amount of tuning would reduce the SWR. So, I moved
the antennas further apart, about 30cm, and now the
SWR ranges between 1.5:1 and 1.9:1.

I still have a feeling that the antennas are too close together.
As I see it, I have two options: mount the antennas crosswise
on the mast, which is undesirable, because I want them both
pointing in the same direction, or to increase the spacing. This
will cause me to use a longer mast or to have one antenna
fairly close to the rotor, which might cause more problems.
My question: is there a general rule of thumb for yagi separation
distance, or is what I am doing a no-no?

Thanks in advance for the advice,

Mark Olson AA0MH

Which model scanners do you think were manufactured by Tandy?

Most of them were made by GRE. GRE made some scanners for other
companies, like SBE and Handic, too.

You might find a Tandy designation on the FCC ID, but I don't
think that infers Tandy actually manufactured the scanner
in a Tandy factory.

Message-ID: <1993Nov11.165424.13354@sifon.cc.mcgill.ca>
Source record: 274340

I have the "business end" (load) of a calorimetric type RF wattmeter.
Unfortunately this unit is missing its indicator and manual.

Specifics:
RF Wattmeter Model # 641N, SN 794D
Impedance: 50 Ohms
Frequency Range: 0 - 3000 MHz
Power: 0 - 300 Watts
Manufacturer: M. C. Jones Electronics Co., Inc.
Bristol, Conn., USA

The indicator connects to the load housing via a 4 pin Jones socket.
The load has been checked (SWR) on a network analyzer and is still useful.

Does anyone out there recognize this unit? Does anyone have a manual
for it? I would like to reconstruct the indicator (with modern components)
and I would like to know the details of the sensing elements (thermistors,
thermocouples, etc. ??) in the load and their connection to the 4 pin Jones
socket.

Thanks,

de ...wouff...

Message-ID: <1993Nov11.180259.27183@cactus.org>
Source record: 274357
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

I am thinking about a project to put in a swr protection circuit in my QRP radio. It is a TEN-TEC pm2. A direct conversion 1 watt vfo/crystal transceiver.
I am using a 10 ohm resistor in the dc line to the collector on the final, and when I have it tuned for the antenna I take the resistor out and close up the line. Crude I will admit. This is only a temporary fix and will not be good for portable operation such as camping etc. So....

Any suggestions for a protection circuit would be appreciated as i am very new to the sport of ham homebrew and need some elmering on most things.

Thanks

I had 2 on my Toyota 4x4 and they performed well with the Motorola line
of antennas. Watch out for anything big like the Diamonds/Comets with
the stainless steel whips. If you catch them on something you'll pull
the mount out. They do bend over for going into low places but mine
wasn't low enough for one parking garage :(.

I used the Motorola drill bit and it worked fine. I was able to 'aim'
the coax towards the side of the truck and ran it down the door pillar
beneath some trim.

4221. Telescoping antenna on HT

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-11 18:57:41 UTC
From: david@bu.edu
Message-ID: <2bu1v5$cf1@news.bu.edu>
Source record: 274345

I just received the ARRL's --New Ham Companion-- and an article about antennas for HTs says:

"Telescoping antennas are popular because they can be 'whipped out' only when needed. If you're hitting the repeater, there's no need to extend then whip. When you're not getting in, extend it to full length. Telescoping antennas are usually 1/4 wave when collapsed and 3/8, 1/2 or 5/8 wave when extended..."

My question is: Is it proper to use an antenna in this colllapsed fashion? I have an MFJ-1714 1/2 wave antenna that looks like it is far shorter than 1/4 wave when collapsed. The reason I use a rubber duck when mobile is that I feel like I'm carrying a sword with the extended 1/2 wave. Is there any potential for damage to the HT by transmitting with the antenna collapsed? [I realize we're only talking about a couple of watts.] Can I expect better results with a collapsed antenna vs a rubber duck?

This is probably a simple question, but the statement goes against what I have picked up about operating with good SWR etc.. Thanks in advance.

Source record: 274361
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc

I did some rough measurements a few years ago with a 70cms colinear on one side of the car and a 2M 7/8 on the other side. Isolation was about 17dB (i.e. put 50W up the 2M coax and measure 1W coming down the 70cms coax!)

Far better to use a diplexer (or triplexer) unless you have a really good front end. You shouldn't cause any damage, but weak-signal performance may be degraded, and you increase the chance of intermod with other strong local RF.

If you are running a scanner on any of the aerials then it will probably be totally blown away because there will be virtually no selectivity before the first mixer.

Too late for the above, but it will take some time to apply in the UK because (a) you still have postal and processing delays and (b) half the time it seems that the agency handling the licence issuing will lose the information or forget to remind people. If they can't handle the regular stuff what chance has anyone else got? :-(

Text item: Text_1

>Feedline radiation and "hot" station grounds are caused by unbalanced
>currents on the feedline. So long as everything is balanced, you
>shouldn't see a problem.
>AL N1AL

I agree with Al and everyone promoting ladder-line over coax on HF.
One reason for using ladder-line is very low losses even with very
high SWRs. But remember with very high SWRs, there can be some very
high voltages. One night the cat was playing with my ladder-line as
I started to tune up on CW. As I keyed down, the cat let out a squeal,
jumped four feet in the air, left the room, and never entered the
shack again. 600 watts into 3000 ohms gives around 4000 volts peak
to peak so be sure to take reasonable precautions. There is quite
a field very close to the transmission line which falls off to a
neglible value a few inches away IF THE CURRENTS ARE BALANCED as they
should be. This is normal and not considered to be "RF in the shack".

73, Cecil, kg7bk@indirect.com (I do not speak for Intel on Internet)

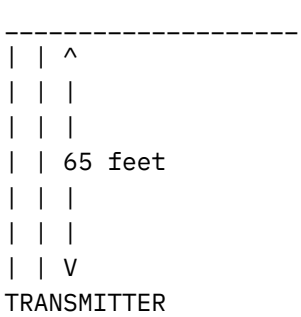
: directly above me. This may be part of the problem.

: Anyway... Right now the dipole is tuned for 1:1 SWR around 3800. Anywhere
: from about 3700-3900 the SWR is below 1.5:1, however I have severe 80 meter RF
: getting into everything in the shack. If I go down to the CW part of the
: band the SWR goes up over 3:1, but ** the RF problem goes away ** !! ??

It may not be a coincidence that your feedline is about 65 feet long -- almost
an exact 1/4 wave on 80 meters. Here's a schematic of your antenna:



I assume the coax is connected directly to the antenna -- i.e. the center
conductor goes to one half of the dipole and the shield goes to the other.
Since the coax shield is resonant on 80 meters, the same as the antenna
wire, the antenna return current is just as likely to flow on the shield
as the antenna, so you have lots of feedline currents. That may well be
what is causing your "RF in the shack."

Why is the SWR better at frequencies with the RF problem? It's hard to say,
but with the antenna so close to the ground and so close to other conducting
objects, you undoubtedly are not getting the impedance you would have if the
antenna were in "free space." Evidently you the feedline current is such
as to make the antenna closer to 50 ohms. When you change frequency to where
the feedline is no longer resonant, the SWR goes up.

I would recommend either (1) installing a 1:1 balun at the antenna feed
point (top of coax) or (2) changing the coax to a non-resonant length.

If the SWR is then unacceptably high, then prune the antenna wire length to bring it back into tune.

You might also try a VERY SHORT, fat ground wire to a good ground rod. Since you are on a long-wavelength band, and the radio shack is in the basement, you might be able to get a low-enough impedance ground to do some good.

By the way, 35 feet is pretty low for an 80 meter dipole. If you could figure out how to get it up higher, you'd probably get better DX.

Good luck!

AL N1AL

Dear Mark,
There is a rule of thumb (which I've forgotten) and one antenna
(can't remember whether smaller or larger) will see the other, but
not the reverse. Also a vertical yagi on the mast will see the mast
and be unhapy (the mathematical term for it). How about putting a
cross boom on the maast and putting but antennas on the horizontal
corss boom?

You are looking for a YAESU 726R. Icom also made a rig designated 726, but it
will not help with shuttle missions, since it is an HF Rig which also covers
6 meters.

>either by ear or with a scope setup XY. This will allow you to tune very
>accurately.
>

Depending on the make of radio, the filter could be above or below the indicated frequency. At any rate, it's actually easier to determine exact frequency if you don't use any filtering. If you can hear the station's signal on both sides of zero-beat (the point at which the audio signal completely disappears), you can center the frequency at the zero-beat. The tuning indicator will then show the exact frequency. Then tune 800 Hz higher and you're dialed in.

Practically speaking, most commercial crystal filters perform quite well and have a very flat passband. If you can hear the other station's signal at a comfortable pitch using the filter, the difference between the actual signal level and the "optimum" level for a perfectly tuned signal is miniscule.

: |>
No! Have you not seen where FCC says 200w PEP but we all know that is
100 watts, light-bulb power.
Look at the watt power ratings on antennas and tuners!
Do they survive those powers?
NO!

Look where they are made....in THAT country, their 300 watts is like our
100 watts.

So YES! a bird Watt meter will need its scale re done to show that 1/3 of
power reading.....else, cover the meter so, it is 1/3 visable.

4235. tuning in CW

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-12 04:29:50 UTC
From: oo7@emx.cc.utexas.edu
Message-ID: <2bv3fuINN8ra@emx.cc.utexas.edu>
Source record: 274350

Sorry, I forget who first asked the question, but one way of checking
is to tune in WWV using whatever setup you use normally. You know
their frequency to high accuracy....

I can sympathize with the original poster. I usually listen at a low
pitch (400 Hz?) with the RIT on, and I know this means that I have to
add about 0.4 KHz to whatever the vfo shows if I want to tell someone
else the frequency of some station. But it can become confusing if
you are using two vfos, and have the RIT applied to only one of them.
If a DX station sends "2 up" and I want to go 2.000 KHz up I have to
do some fast (for me) thinking.

If it's any consolation, lots of people are obviously unable to zero-beat
with each other. Another dying art or something...

Gang,
In a previous discussion someone mentioned the monitoring of beacons
to check band openings, so here is a rather complete list of 10 meter
beacons. I received this from ham-server@grafex.sbay.org.
What I find very interesting to note is the very low power that
most of these beacons use; a good portion are in the QRP range
(5 watts or less). As is said, when the band is open, one can use
flea-power and still be heard.

Jeff NH6IL

Oh, hopefully the NH6IL/B 10 meter beacon will be operational in January;
as of now Hawaii is not represented on 10. I'm shooting for 28.203 - I'll
make an announcement when it's on the air. 5 watts into a 5/8 wave vertical.

Jeff NH6IL

Help! I tried the DJ-560 mods at all the FTP sites I could, and there are no wires in the thing that do what they said. (I think.) I found out that by cutting the ORANGE jumper, I could get all-band trasmit (not what I wanted) but I never figured out how to get the aircraft band or 800MHz band receive it will supossedly do. I just want to receive here, not transmit. I really don't want to open the radio up AGAIN (for the 18th time) until someone can tell me what to do. BTW, the only red and blue wires in it are to the speaker and the battery (I think) so any mods involvin cutting those, I've tried and found they didn't work! ACK! Can anybody help me? It will be VERY MUCH appreciated.

Mike;
On this side of the pond we write our dates as Month/Day/Year. It's just
as confusing to me when I read newsletter posts written in Europe.

>worse if the SWR was higher.

Try adding an 80 meter radial connected to the grounding post on the radio.
Also try reducing the output power.

The callbook does not necessarily enter all corrections they receive ...
I have a friend operating on a reciprocal license whose addresses are
incorrect in both the domestic and international callbooks. He has asked
them for two years to change both, without success....

By the way, for those who don't know, there is a server where one can
telnet for U.S. call information:

To avoid confusion I prefer to write day-month-year with month _spelled_ out (even non-native English speakers recognise this):

12 November 1993

An ARRL QSL recommendation I've seen used is not bad either:

12 XI 1993 (is that old or what!)

And, to be complete, for online stuff that I want to sort by date:

1993 11 12 (year-month-day): makes sorts simple and meaningful. There is a neat way to do this in DOS so all your DIRs, etc. automatically show up in this format all the time without you having to pre-process before working with the output.

Could someone please enlighten me on DSP units such as JPS, Datong, and
Timeware(?) sell? How well do these puppies work?

Are there kits and/or plans to build your own available? From where?

* DOVE RECOVERY BEGUN *
======================
The following is by Jim White, WD0E:

DOVE is up and running on 2 meters. It is sending normal ASCII telemetry and short text bulletins on 145.825. A very quick look at telemetry indicates the s/c is basically healthy.

The team of Bob Diersing, N5HAD, Bill McCaa, K0RZ, and myself have been working very intensively for about 10 days to create and test new software that allowed automated software loading via two meters in a half duplex mode. This replaces the 'ear-ack on s-band' method N4HY had used in the past that was so difficult as to be a barrier to recovery.

We would like to have telemetry reports. Please send them to vk7zbx@KO-23, @ AO-16 or on internet vk7zbx@amsat.org or to me wd0e@amsat.org, or CI$ 71477,546. The most recent version of TLMDCII (3-8-92) will decode and record DOVE telemetry very nicely.

After we are sure the satellite is stable in this configuration and the power targets are established, the next step will be to load up through PHTX and test the voice module. Depending on the condition of the s/c and other issue, this could take several weeks.

It'd like to express sincere thanks to Bob Diersing for all of his hard work creating a RAM loader, and Bill McCaa for the many passes of s-band and two meter receive he provided (often late into the night). It could not have been done without their enthusiastic efforts.

Thanks also to Harold Price, NK6K, for providing the development system hardware, software, and a good deal of coaching. His contribution was invaluable.

Given a reasonably healthy s/c, I'm confident we can make DOVE talk as I described at the AMSAT-NA Space Symposium in Dallas a few weeks ago.

* OSCAR 20 SCHEDULE CHANGE *
==========
Effective December 1, 1993, the Fuji-OSCAR 20 satellite will change its digital/analog operating schedule. At present, the satellite functions as a packet BBS every day except Wednesday when it switches to the analog transponder (CW/SSB) mode for approximately 24 hours.

Beginning December 1, at 0843 UTC, OSCAR 20 will be switched to the analog mode (Mode JA) where it will remain for one week. On December 11, at 07:51 UTC, it will be switched back to the digital BBS mode (Mode JD) for one week. The modes will continus to alternate on a weekly basis until further notice.

The December operating schedule is as follows:

Mode JA-Analog : 01-Dec-93 at 08:43 UTC through 08-Dec-93 at 07:16 UTC
Mode JD-Digital: 08-Dec-93 at 07:16 UTC through 15-Dec-93 at 07:41 UTC
Mode JA-Analog : 15-Dec-93 at 07:41 UTC through 22-Dec-93 at 08:05 UTC
Mode JD-Digital: 22-Dec-93 at 08:05 UTC through 29-Dec-93 at 08:30 UTC (+/-)

OSCAR 20 Frequencies:

Digital Uplink : 145.850, 145.870, 145.890, 145.910 MHz
Digital Downlink: 435.910 MHz

Analog Uplink : 145.900 to 146.000 MHz
Analog Downlink : 435.800 to 435.900 MHz

The analog transponder inverts uplinked signals. LSB on the uplink becomes USB on the downlink. A signal in the lower portion of the uplink passband appears in the upper portion of the downlink passband.

The decision to change the schedule was made by Toshiyuki Kondoh, JR1NVU, who is in charge of FO-20 operations. By providing a full week of analog transponder time, the OSCAR 20 command team hopes to encourage more hams to use this mode.

The Japan Amateur Radio League offers a "Fuji Award" to any amateur making at least 10 contacts via OSCAR-20 Mode JA. More details on this award will be relayed as they become available from the JARL.

[Info from Fujio Yamashita, JS1UKR, via W1AW and the ARRL]

4245. Buying a used tower

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-12 14:40:17 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9311121440.AA14799@metro.mccneb.edu>
Source record: 274282

Scott Ginsburg WA2CJT says that he is looking at a used tower for purchase.

May I recommend getting an expert to look at the tower? I've had to construct 5 towers (70'-200') in the past 5 years, and I learned far more than I ever thought I'd need to know about that specialty. It will cost you a few bucks, but may save you several times that much.

Look for a certified professional consulting engineer (PE) to look at the tower and parts, and ask that the following questions be answered:

1. Is the site you've picked geologically and mechanically suited and safe for what you plan to erect on it? (Short tower, usually not much problem.) Include need for guy anchors, protection from/for existing utilities, etc.
2. Is the tower you are looking to buy mechanically sound (uncorroded, unstressed, untwisted, no cracks, sound welds, etc.?). Include all accessories, mounting devices, rotators, etc.
3. Is the tower safely able to carry what you plan to put on it -- including calculations for wind-load and ice-load likely to appear in your part of the world when compared to present condition?
4. Are there local ordinances affecting the structure you plan, including how it is to be installed?
5. This is a "maybe": Are there other similar structures sitting in someone's garage/warehouse/trailer that might be a better deal for your application. Many consulting engineers, especially those who work with communications, keep track of used equipment, and may be able to do you a major favor.

The best kinds of advice that I get from our PE are the ideas starting out "Instead of what you described, have you ever thought of ..... "

Consulting engineers usually charge in the range of $50 per hour, and they can usually give you a free telephone guess as to how much time (and cost) your request will take.

I'd recommend considering this if you are considering a major (to you) purchase.

I'm thinking about getting the EX-243 module for the IC-735. One question:

When the keyer module is installed, is it possible to NOT use the keyer, and
instead use an external keyer or straight key?

Thanks!

Their rules don't allow that. They've got this national software POS system ("last four digits") that has them scan in everything they sell. If they give anything away, woe unto them! What I did was wait until I had a purchase over $3.00 (almost every time I walk in the store), and then get the catalog FREE with the coupon. That's the intent. They're just trying to save a few bucks by not giving out the catalog to people who don't buy ANYTHING.

Now, I guess, for those hams out there who just like to have the shack catalog to compare against or to say "yeah, there's a neat little toy," you now have to BUY SOMETHING to get it. If you're not interested in "shopping" at R/S, then why do you need the catalog?

SB DX @ ALLBBS $RTDX1112
VK2SG RTTY DX Notes, 12 November
VK2SG RTTY DX Notes for week ending 12 November 1993 (BID RTDX1112)

The DXAC has on its agenda an upcoming vote before the end of this
year, "RTTY Honor Roll." Ballots have been mailed out by the vice
chairman, Charlie Summers Jr, KY0A and are due back to him from the
committee on 29 November. The justification for RTTY Honor Roll still
remains. RTTY or digital radio is the fastest growing mode of ham
radio. RTTY contests are becoming increasingly popular. Honor roll
is a logical goal, as it is with phone and CW. Many who have reached
the top on other modes are turning to RTTY for new challenges. This
vote is very important to all! The time is now! Please spread the
word and let your feelings be heard. Write to your DXAC rep and to
DXAC Chairman W4VQ, Robert Beatty III, 11 Heritage Cove Court,
Casselberry FL 32707. After all, we do have DXCC for RTTY. Why not
Honor Roll?

Our information this week came from 9X5LJ, DJ3IW and the DB0BCC
Cluster Node, I5FLN, IK5AAX, SP5AA, WA1MPB, W2JGR and the NJ0M node
Twin-Cities DX Packet Cluster Network, W5KSI, ZS5S. Thank you all for
your assistance.

Text item: Text_1

>The thing I always wonder is why traps are never suggested to perform
>this function on tuned feeder dipoles and 'random' wire antennas. Greg

Hi Greg, most of us would rather concentrate on matching the transmitter
to a simple, cheap, near lossless antenna-system with a good antenna tuner.
After all the expense and hassle of installing traps, the antenna will
probably still work better with an antenna tuner so why bother with traps?

$15 worth of plain wire and ladder-line will usually radiate more energy
than a trap-antenna fed with coax... use the money that would have been
spent on traps and coax to build a good balanced antenna tuner.

In addition, a lot of us prefer the radiation patterns of 2 wavelength
antennas to half-wavelength antennas. I get 4 lobes with 8+ dbi gain
on 17 meters instead of the dipole 2 lobe, 7+ dbi pattern.

Source record: 274292

> Is there any potential for damage to the HT by transmitting with the
> antenna collapsed?

Maybe. I've measured the SWR of my Hot Rod antenna and found that once you collapse it to less than about 3/4 of full length, the SWR goes to hell. Curiously, holding it over a ground plane (large metal vehicle hood) makes it worse, where it helps a rubber duck.

Anyway, with a high SWR your HT is eating lots of reflected power. Will this hurt it? Maybe, maybe not. Probably you should feel it get hot first if it has time to sink the heat out to the case. (The FT411 apparently uses the metal case back as a heat sink exactly for this reason; it does get hot on 12V = 5W, and you can feel it.)

> Can I expect better results with a collapsed antenna vs a rubber duck?

No, the rubber duck is tuned and hence is much better at the same length, although both "capture" the same amount of space.

Message-ID: <9311122339.AA02883@cmr.ncsl.nist.gov>
Source record: 274294

The net has recently seen a bit of good-natured (?) joshing about who is out of step on abbreviating dates... I've gone to the unassailable authority in such matters, my MS-DOS User's Guide and Reference ......

Date in words: The fifteenth day of December in the year one thousand nine hundred ninety three.

Abbreviated Countries where used
------------ ---------------------
12/15/1993 USA
15/12/1993 Belgium, Spain, Italy, United Kingdom, Brazil, International English, Latin America
15.12.1993 Finland, France, Germany, Norway, Switzerland
15-12-1993 Denmark, Netherlands, Portugal
1993-12-15 Canada(French), Hungary, Yugoslavia, Czechoslovakia, Sweden, Poland
Note: Doesn't Japan use something like the last format (above)?
It also seems to me that following is true...
19931215 American National Standards Institute (since it collates directly without any special treatment).

Who's out of step?

73, Bob W3OTC

>>>>> Not a reflection of my employer's views, if any.

4259. What do I do now/

Message-ID: <1993Nov13.003516.27888@icaen.uiowa.edu>
Source record: 274310

Well, I'm almost ready to got on the air HF-wise for my first time. I've
got my random-wire tuner, a tranceiver, a random wire, cables to connect it
all...all I lack at the minute is a counterpoise (well, multiple counterpoises
for the 2-3 bands I want to get on to) and an SWR meter, which I should be
getting in a few days.
Question: Now what? I don't have a clue about what the controls
on the front of my trusty old HW-101 do (what's a Final? What's a Drier
erps...Driver Preselector?). How do I regulate my power output? In short,
what in the world do I do?
The manual doesn't give me any help, and I don't seem to be able to
find anything which tells me just how to tweak everything and get on the air!!!

Any help?

Peace es 73,

Doug N0YVW

A few years ago, there was an article in QST about the CMOS Super
Keyer II. I bought the kit from Idiom Press, and put it together in
a few hours. It's a 1 chip microprocessor, and you just add some
resistors, switches, a pot and battery holder. Works great.
It has 4 memory positions, and is controlled by Morse commands
on the paddles. Speeds from 6 to 60 on the pot. Works great
in contests, and batteries last for years. Send a sase to Idiom
Press at Box 683, Deerfield, Ill, 60015 for info.

I believe W9GR is still offering his kits, even though there
is now a commercially-built version (selling for nearly 3X
the price). Why don't you ask him. His Internet address is:

dlh@gvgdsd.gvg.tek.com

His was the first inexpensive DSP unit offered for ham use.
It was described in September, 1992 QST. I built one in
February of this year and it works fabulously well for me.
More sophisticated units are now available, and may work
even better.

There have been a number of mods described on this BBS,
and in print. I have made them, as well as one of my own:
I added an audio AGC stage from a kit I got from Steve
Szabo, N1AYO. It was described in ELECTRONICS NOW,
February, 1993. It makes operating more convenient,
but does not add to the basic performance.

Good luck and 73, Van - W8UOF

I would say the standard USA format is the worst - at least all the others manage to go either most significant to least significant or vice versa. When you add the time to it, the ones with the year first make the most sense in computer terms.

Wasn't there a court case in the USA once where a European had died and left a will which was apparently dated *after* he died? Evidence had to be produced in court to prove that over this side of the pond we use DD/MM/YY instead of MM/DD/YY. Perhaps legal documents should not be signed before the 13th of the month in order to make such things a bit clearer :-)

HTs are designed to work into horrible SWRs because they don't have
a groundplane, your hand is it, and the ducky is a poor antenna as
well. Still, a collapsed rod antenna isn't going to be very efficient.
It won't hurt the radio to use the rod antenna collapsed, but it won't
help your signal.

4270. Hold Function for Radio Shack Frequency Counter (Did It!)

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-13 17:31:35 UTC
From: galen@picea.CFNR.ColoState.EDU
Message-ID: <Nov13.173135.15860@yuma.ACNS.ColoState.EDU>
Source record: 274300
Cross-posted to:
rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,sci.electronics,rec.radio.scanner

How to add a hold function to the Radio Shack RF Frequency Counter:

Ground TP17. In the schematic, TP17 is pin one of U3, connected to
+5V thru a 47k resistor. On the circuit board, TP17 is on the display
side, just right of the lower-right corner of the IC. Grounds are about
1/4 inch below and to the right, the three non-tinned points in the large
area of metal.

I grounded TP17 directly and the display stopped. After lifting the ground,
the counter resumed counting at the beginning of a sampling cycle.

Personally, I would ground TP17 thru a 1k resistor. I haven't performed
the mod to my RS counter, since the pads are VERY small and my fine-tip
iron is at work. I will try the 1k Hold mod on Monday and give a report
(unless somebody beats me to it).

An amplifier mod to increase the sensitivity is in the works, reports to follow.

Happy Trails to You,
Galen, KF0YJ

4271. Re: DSP units--W9GS DSP II

Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

I recently purchased the W9GS DSP II from JCOM. It is simply fantastic!
As a CW filter it is really terrific. The 30HZ filter really does work!
I have an ICOM765 & I turn on the 500HZ filter & then use the W9GS DSP II
on the audio & it really does a fine job. My only complaint is that the
filter is set up so that the pitch is a bit high for my taste (i.e., you
have to crank the RIT up about .2KHZ to get the pitch at the right spot
for the filter -- I would prefer it a bit lower.

Don't have any experience yet on SSB.

NOTE: The Effective Sunspot Number for 11 NOV 93 was 34.6.
The Full Kp Indices for 11 NOV 93 are: 2- 3- 2o 2- 2- 1+ 1o 1o

SYNOPSIS OF ACTIVITY

Solar activity was moderate. A new region has appeared
at east limb, 7618 (N08E73). It was responsible for an M2.0/SF
flare, with associated Type II at 12/0225Z. The region has
also produced several C-class flares during the period.

STD: Two Type II sweeps were observed from Region 7618. The
first, at 12/0225Z had an estimated shock velocity of 1600
km/sec. The second, at 12/2108Z was estimated at 600 km/sec.
Flaring within this region has been very frequent and fairly
impulsive. As one would expect, the region is bright in

x-rays. Limb proximity is preventing detailed analysis of the region. A special insert showing the x-ray emissions observed by the Japanese Yohkoh x-ray satellite has been appended to this report.

Solar activity forecast: solar activity is expected to be low to moderate due to Region 7618.

The geomagnetic field has been at quiet levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to unsettled throughout the period.

Event probabilities 13 nov-15 nov

Class M 50/50/50
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 13 nov-15 nov

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 20/20/20
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over all regions. Hiraiso Japan reported a strong short wave fadeout (SWF) in conjunction with the M2.0/SF flare between approximately 02:22 and 02:46 UTC. Other areas did not experience effects as pronounced as Hiraiso. Conditions should continue near-normal. There is a high probability for periodic short wave fadeouts (SWFs) over the next several days at least. Region 7618 appears to be a fairly volatile group at the moment. Most of the SWFs should be fairly brief in nature.

----------------------------------------------------------------

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
11 Nov: 0246 0255 0259 B1.8 III
1441 1456 1505 B8.4 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SPECIAL INSERT: CURRENT X-RAY EMISSIONS FROM THE JAPANESE YOHKOH SPACECRAFT

I don't think it was meant to be unfriendly. Not all DX stations are
running 30 WPM and making 3 contacts a minute. There are penty of new
hams in DX locationsthat are in the same boat as new hams here struggling
with operating procedures and code speed.

The point is you can't expect to work a Bouvet or Peter 1 dxpedition until
you have developed the skills required to do it. There will be plenty of
operators with excellent skill that miss out on a dxpedition like that.
Run with the little dogs for awhile and develop the correct techniques,
before you know it you'll be elbowing it out with the wolf pack in the
pileups.

The Novice license used to be kind of like a bunny slope at a ski hill. It
gave you a chance to operate with others at your skill level so that you
would be ready for what goes on in the other parts of the band. It is too
bad that so many hams are skipping over this and missing out on a valuable
part of their training.

The W2A is the one with which I am familiar. You could buy 1,000 of
them and go to some country where there are no laws, and use them to
equip a small army with very sophisticated communications.

Each radio can be programmed with a three-digit number, and it is silent
until someone calls with that number programmed into their unit.

Plus there is a way to set up groups where you can key your mike and
talk to everyone in the group and they can talk back.

You could imagine a family (all with ham licenses) using this as a
really neat way to keep in touch through many family activities --
picnics, trips to the amusement park, shopping mall, etc.

Just passed my Technician exam (no license yet) and I want to prepare
for the code tests. I have a PC at work and have a fairly nice shareware
program for it (Super Morse). Are there any snazzier programs
available for the PC (free, share, or commercial)? I have a Mac at home
and would like to practice there (I really ought to be working at work!).
Does anyone know of any shareware or commercial programs that will teach
code on the Mac?

Thanks,
Joe

You may want to anonymously FTP into world.std.com in /pub/hamradio

There are directories with respect to the system you want and the type
of program you looking for from that point.

73,
Scott

-> Mike; On this side of the pond we write our dates as Month/Day/Year.
-> It's just as confusing to me when I read newsletter posts written in
-> Europe.

I suppose that we should count ourselves lucky that they don't write the
time as MM:SS:HH, following the same logic as MM/DD/YY then it should be.

That may be, but it isn't distributed back to the stores - I go to two different stores here 15 miles apart and they have totally separate data bases on customers...

NOTE: The Effective Sunspot Number for 12 NOV 93 is not available.
The Full Kp Indices for 12 NOV 93 are: 2o 2o 2- 1+ 2- 1o 1o 0+

SYNOPSIS OF ACTIVITY

Solar activity was moderate. Region 7618 (N09E62), the
sole spotted region visible, produced an M2.1/1F flare at
0628Z. It is also the likely site of an M1 event at 0417Z, when
clouds hampered optical patrol. The region consists of ribbons
of bright plage, and a possible delta configuration in the
trailer spots.

Solar activity forecast: solar activity is expected to
persist at the moderate level, with additional M-class flares
likely from Region 7618.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled.

Event probabilities 14 nov-16 nov

Class M 60/60/60
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 14 nov-16 nov

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 20/20/20
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions continued normal over all
regions. One additional confirmed SWF was associated with the
M2.1 flare at 13/0628Z, although it was fairly brief. Similar
near-normal conditions are expected to persist over the next
72 hours. A moderate to high probability exists for possible
additional SWF activity over daylit paths.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

There is a newsgroup dedicated to cable TV and descramblers. Its been so
long I cant remember what its called, alt.cable.tv ?? Anyway, you may
have more luck there.

I took (and passed) my no-code tech exam today; the VEs told us that
the waiting period had drastically dropped to 5 weeks, believe it
or not.

Message-ID: <1993Nov14.061144.21788@math.utah.edu>
Source record: 274316

Hi,

I have become the proud owner of a Kenwood TS-820 HF transiever.
I also have a CMOS Super Keyer II. I need to know how to build
the circuit that will interface the keyer to the radio. In
the ARRL Handbook they refer to a QST article from Feb. 1990
"Cheap and Easy Control Signal Level Converters". I am hoping
that someone here could either send me the article or describe
the procedure needed to make they keyer and radio work together.

If you can help I would appreciate it.

Please email me at levin@cosmic.physics.utah.edu

Thanks in advance.

Chris (KB7YOU)

Gary: What does your supercilious answer say about current attitudes
of experienced hams toward newcomers?

Doug: Welcome to ham radio!

Before you do anything else, find an "Elmer". That is a term
describing an old-timer in ham radio who is always interested in
helping newcomers to the ham world. In spite of Gary's ill-tempered
reply, you will find plenty of willing helpers to get you started.

I have held my call for 53 years, but I am not so forgetful (yet):-)
not to remember how green I was when I started!

Surely there are lots of hams at the U. of Nebraska! Ask around.

73 & good luck! Van - W8UOF

IMHO the only one that make sense is one that is not ambiguous. That uses the 3 character month field. Example 20JUN1993. No possible ambiguity here. Any of the others can be. For computers the one that takes the least storage would be the best. You are going to tell the computer how to read it so no ambiguity there either since it carries with the program the definition.

Well you really don't need an SWR meter for a random wire installation, but get one if you must. Just try not to be as fixated on obtaining low SWR readings as most hams are. All you really need for a random wire installation is a relative output indicator, a NE-2 bulb and loop will work fine.

> Question: Now what? I don't have a clue about what the controls

>find anything which tells me just how to tweak everything and get on the air!!!

There are several schools of thought on rig tuning. Tune for maximum smoke seems to be a common approach, as does the all knobs to the right approach. But let's try to be a bit more rational. I haven't sat down in front of a HW101 in years, so I'll restrict myself to general advice.

First set your band and frequency controls to the band and frequency where you intend to operate. Switch the radio into the dummy load. Your tuner may have one included, if not, *that* should be your first purchase. Set the "load" control on the radio to minimum, usually fully counterclockwise, and set the driver tuning to the band of interest. (Note, on many rigs the driver preselector and the receive preselector are one and the same. In that case, before switching to the dummy load, peak received signals with the control. That'll get you close to the desired transmit setting.)

Now the next few steps have to be done rather quickly so read them through until you understand them before proceeding. Find out how to place the radio in transmit. There may be a "tune" position on a mode switch, and/or you may have to put the radio in CW mode and close the key. Make sure the meter is switched to PA amps. When you go into transmit, quickly adjust the "plate tuning" control for a "dip" in the meter reading. This will be the resonance point. The dip in the meter reading should be rather sharp. The meter reading should be rather low at this point. Now adjust the driver tuning control for a maximum reading of the meter. This will "peak" the driver tuning for your operating frequency. Your

manual should tell you the ideal plate current for the radio. You will alternately advance the loading control while redipping the plate tuning control until you achieve this current reading at resonance. The dip will become less sharp as you increase loading. Note: you should do this rather quickly, no more than 10 seconds of transmit at a time, or you can damage the finals. If it takes you longer, let the finals rest a few seconds between efforts by unkeying. At this point the radio should be properly tuned.

Now you need to adjust the tuner to present the radio with a 50 ohm load. There are several ways to do this, but the best is with a noise bridge. Switch from the dummy load to the tuner and insert the noise bridge in the line between the radio and the tuner. Adjust the tuner for a null in the receiver noise. At this point remove the noise bridge from the line and you are ready to transmit, all without ever putting a dead carrier on the air. This is the ideal tuning method, but if you don't have a noise bridge, there are other ways.

If your tuner uses the typical circuit, there should be three adjustment knobs. One will be called input tuning, one will be a switch for the inductor taps, and the third will be output tuning. If your tuner is an 'L' network, there will only be two controls, a tuning control and the inductor switch. In some cases the inductor may be a roller inductor with a turns counting dial instead. In any event, here's a method for tuning up on the air. First select an unused spot in the band and tune the radio into the dummy as above. Switch to the tuner. Set the tuner's output tuning to minimum if you have that control. Now listening to the receiver, adjust the inductor taps, and input tuning, for strongest reception of atmospheric noise. Key the transmitter and adjust input tuning on the tuner for a dip on the radio plate meter. As before with tuning the transmitter, alternate between output tuning and input tuning controls on the tuner until the plate meter reads the proper current at dip. You're tuned up. Alternatively, couple an output indicator to the antenna, and adjust output tuning for maximum output while adjusting input tuning for plate current dip.

If you bought that SWR meter anyway, you can place it between the radio and the tuner and adjust the tuner's input tuning control for minimum SWR while adjusting output tuning for the desired plate current and maximum output.

This all sounds complicated, and requiring three hands, but it's really easy once you get the hang of it, and you should be able to tune the rig in 3 or 4 seconds. Once you get a feel for where the controls should be on various bands, you'll preset them before starting to tune, and all you'll need to do is quickly touch them up.

Gary

If anyone out there knows where an amateur radio class close to Hayward, CA is, let me know. I'd like to get in on the beginning of a class which is local, if possible.
Thanks, Sheri Ritchie @ Easy Access

While the question asked related to rfi to auto computer equipment,
I figure that there is one other point to be made...

When connecting to the 12 volt system of a car, its *real*good*
pratice to get as close to the battery as possible. Generaly,
I,ve done this by using a Burndy clamp to make the splice on
the cable as it comes from the battery. "Split bolt" type
clamps also work and bith should be in stock at electrical
contactor or their suppy houses. These ar used for high current
applications in industrial applications and elsewhere.

Yeah, this little puppy interests me. Talked to a guy on 17M who raved
about it. Claimed it suppresses receiver noise too. I'd like to know
a bit more about its capabilities (and price!).

Any enlightening info on the DSP-9 ?

I'll post a summary to the newsgroup of anything sent to me as mail...

Gary,
I would suggest you consider turning your ticket in and hanging out on CB for the next ten years, where attitudes such as yours constitute acceptable behavior.

Cut the kid some slack, bud, and look up the concept of "Elmering" in the books on your shelves. Even doing nothing more than suggesting that Doug pick up a copy of the '94 ARRL Handbook and do some reading is vastly preferable to your boorish comment.

I suggest pounder apology is in order

I just got the little TU-8 so that I can do 10 meter FM with PL, as we seem to need around here. I didn't get any spec sheet or instructions though. Anyone have the instruction sheet (copy?) that I can have.... OR can anyone give me instructions on programming the little thing for various tones? It uses dipswitches so I can only put in one tone, but that seems to be all I need.

Howdy,

I am in the process of studying for a Tech-No code ham license (Hope this doesn't turn some of you off from reading the rest of this message. :-))

I will be driving to Texas in a few months and would like very much to take a HT with me (actually that is irrelevant as I might purchase a mobile unit). I would really like to be able to stay in touch with folks back here in NJ. What band would you recommend to accomplish this, and is it possible on the freqs allowed with a tech-no code license?

Thanks,
Rod

4301. Sources of info on older HF gear? (Kenwood, etc)

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-14 21:14:37 UTC
From: white@ccsua.ctstateu.edu
Message-ID: <1993Nov14.161437.1@ccsua.ctstateu.edu>
Source record: 274229

Is there a sourcebook on out-of-production HF gear, i.e.,
older Kenwood, Yeasu, Collins stuff? I was fondling a
Kenwood T-58 (model???) transmitter and recceiver set at
a hamfest today when a guy next to me bought it out from
under me. I failed to get the model number, etc. so I guess
I'm looking for a compendium of specs & pix.

Message-ID: <7.11715.976.0N55BDD2@cld9.com>
Source record: 274260

Quoting BBS@CRIS.COM to ALL concerning Slowpokes:

```
+- BBS@CRIS.COM to ALL ------------------------------------------------+
| |
|The Novice license used to be kind of like a bunny slope at a ski hill. I|
|gave you a chance to operate with others at your skill level so that you |
|would be ready for what goes on in the other parts of the band. It is too|
|bad that so many hams are skipping over this and missing out on a valuable|
|part of their training. |
+--------------------------------------------------------------------------+
```

I tend to agree with your statement. Though we have many hams entering at the Tech level in our area and many have gone on to upgrade to General or higher the majority of them still prefer VHF or UHF to HF. Eventually you will see the CW requirement all but eliminated. The mystique of having something in common with only 200,000 or so others years ago will be gone! Progress must go forth or does it?

4303. Elmers are dead, god help us HAMS!

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-14 21:34:53 UTC
From: levin@cosmic.physics.utah.edu
Message-ID: <1993Nov14.213453.29632@math.utah.edu>
Source record: 274231

Hello,

This letter is addressed to the group as a whole but particularly towards
Gary McDuffie.

Gary reciently replied to the following letter:

(From Doug N0YVW)

Question: Now what? I don't have a clue about what the controls
on the front of my trusty old HW-101 do (whats a final? What's a
Driver Preselector) How do I regulate my power output? In short,
what in the world do I do?

Etcetera......

Gary's less than helpful reply was:

Now, if that doesn't say something about the current licensing
situation, nothing will.

Now, before I give my response I want you all to know that it is
not my intention to start a flame war nor to beat on Gary any
more than I feel he deserves. However, I have read and listened
to too many responses of this type from people who claim to be
HAMS. (By this I mean that a true HAM is not just someone with a
ticket.) I have finally reached the end of my rope so its time to
respond!

I have been involved with ham radio since the early 80's. I was involved
with my high school radio club and have always had an interest. Since
I am now an engineering student I decided it was time for me to
get my license. I felt that being a HAM would allow me to apply
my classroom learning and at the same time help me to learn new and
interesting things. I also wanted to be a member of what I thought
was an interesting and friendly group (Something you don't find
much of these days). I waited for weeks for it to arrive, started
practicing morse so I could earn a general ticket and got myself
some radios and built a few accesories.

Well the license arrived and now, 3 months later, I'm about ready to
chuck the whole thing and Gary and his buddies are the reason why.

Old hams helping new hams, Yea right. First of all, most of you
old hams don't even bother to respond to a call you don't know.
Do you have any idea how frustrating it is to call KB7YOU monitoring,
get no reply and then 30 seconds later hear one of you old farts jump
on and start talking to a fellow geriatric case? It happens way to

often for me to believe that you just happened to turn on your radio 20 seconds after I stop calling. Well, after having this happen lots of times on repeaters and U/Vhf simplex, I decided to jump into HF.

I've got my code down and I'm looking forward to the test not so I can talk to any of you but simply to prove that a young, stupid, Nintendo playing no code can enter your glorified world of HF. If anything HF is worse. You flip on your kilowatt powered xcivers, and blow apart the airwaves do discuss the state of your bowels with a friend two states away. You can't even here me over your self generated noise. Not that you would respond if you could.

So enough of this blasting of older, higher than tech hams. I feel much better now. But back to the origonal reason I posted this.

Gary, would you care to explain to me what is wrong with Dougs request for help???

I also wonder what all of these knobs on my HF rig (Kenwood TS-820) do. The manual does not tell me, it just gives a tune up procedure. How do I adjust my power on CW or SSB so as not to be rude like other hams I hear on HF? Does the fact that I can't guess the answer because of poor manuals make me a bad person or am I just stupid?

Hey, concept, maybe I'm just new to this and need some help from an experienced HAM who gives a damn and believes in the ideals that created this hobby in the first place.

People like YOU ruin the hobby, not new no-codes who are still learning.

I don't know what you do for a living but if you are not an EE or computer scientest god help you if you ever post a how do I do this question of either of these subjects. I will rip you to shreds because in these fields I AM AN EXPERT. And since you know nothing and are a new comer, I'll just do onto you as you did onto Doug and all the rest of us newbies.

Get a life and do what your mother told you.
"If you have nothing nice to say, don't say anything"

Also remember, not all new no-codes are looking for cheap cellulars, or family intercoms. Most of us would probably enjoy doing more than talking on repeaters if ony we could find someone to show us how. Get with the spirit and be a HAM not just a jerk with a radio.

Sincerly,

Chris Levin (KB7YOU)
Soon to be bugging you on HF (If I can ever figure out those knobs!)

PS: Doug, If you are still out there and have not figured these things out. Email me and I'll share with you the stuff I've learned so far. I think I can answer most of your questions.

PPS: Welcome to the hobby, such as it is.

EMAIL: levin@cosmic.physics.utah.edu

{
{Supercilious - Thanks! I had to look that one up. I enjoy improving
{the vocabulary from time to time.
{

It was not meant to be either kind or helpful. And if you read it
properly, you will see that it was not unkind toward the author, only
the system that put him in that position. It's pitiful, and really
proves what a sad state the amateur service has fallen to. For the
most part, this has been brought on by lack of guidance from our one
national origanization, the ARRL, and the FCC. At this rate, amateur
radio has a much shortened life expectancy. It's really too bad. Ham
radio has been my life since age 15. It has provided me with a career
in two electronics fields, and now third and fourth ones. Today's
newcomer to amateur radio has very little to look forward to, in
many cases.

73, Gary

..> Doug... if you are one of the people who thought this message was negative toward you, please read it again. It is not. You can't help (for the most part), the fact that no one has helped you along the way. You have somehow found a way to get a license. That shows initiative. Look around the neighborhoods. Look for antennas. Knock on doors where you see antennas and introduce yourself to the owners of this hardware hanging overhead. That's how we got the answers in the old days. That's where we found out about operating procedures and accepted practices. That's where we talked on our first microphone or pounded, very shakily, our first HI using a hand key to the guy on the other end. That's where we learned what a "final" was, what a dipole, a zepp, a beam, a quad, a double bazooka, a windom, and ladder line were. In short, the locals aren't going to come to you, you have to hunt them up, shake their hand, and ask for help.

I applaud people like Gary Coffman, who always seems to have the time to take with people and help them out. I didn't worry about trying to answer the specific questions asked by you, Doug, because I knew Gary would. I merely expressed my disgust with a system that would put you in the position of alreads. -- gm

<EDELLERS@delphi.com> writes:
>A lot of RS customers got a mailing recently with (1) a coupon for a free
>catalog, and (2) a discount card good for 10% off the regular price of any
>one item each month.

Yep, I got that also. About a week before my catalog from Ft. Worth and
a letter of apology for charging for the catalog.

(NOTE: Don't take your 10% card in when you redeemn the coupon for the
catalog. The local store is punching the 10% notch on the card for the
month. If you don't have your card, they'll give you the catalog and
forget about the card.)
....

Same thing happened to me. I ended up buying an item greater than 15 bucks
and using the $5 coupon. The sales-droid said "If you buy these tapes for
it, you can use your 10% discount card -- however, the computer came up
with the fact that the tapes were on "special" and thus ineligible for any
other discount. I told him "forget it." They do that a lot - caveat
emptor!

4306. How to find the answers to frequently-asked questions about Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-14 22:54:14 UTC
From: ikluft@kluft.com
Message-ID: <ham-faq-ptr-1-753317652@kluft.com>
Source record: 274247
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Posted-By: auto-faq 3.1.1.1
Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on the 7th of each month. This article is posted on the 14th, 21st, and 28th of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP and from e-mail servers. This article contains instructions for obtaining a copy of the FAQ. It also contains the table of contents from the FAQ so that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good signal-to-noise ratio in the newsgroup. However, they can't do it alone - you, the reader, have to use them. If you are a new user, please print and review the FAQ articles and look at the instructions in the news.newusers newsgroup before posting any articles. If you are an experienced user, please help by refraining from answering frequently-asked questions on the newsgroup if they are already answered by the FAQ articles. Instead, send e-mail to the user who asked the question. (It will be helpful if you include the part of the FAQ that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ----------

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #1 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites
which are directly connected to the Internet. If you don't know how to use
FTP and can't find a friend to help you, continue to Option #3. If your site
is not connected to the Internet, you should also continue to Option #3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily
ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

For what it's worth, I'm a relatively new (spring this year) no-code tech.

I don't usually respond to "monitoring" calls from people I don't know. If I want to talk to someone, I'll say "KD6TTL, anyone listening?", or something similar. "KD6TTL monitoring" says what I'm doing, not what I want other people to do (reply).

Also, I joined a local ham club and ARES; that gave me people to talk to.

>I also wonder what all of these knobs on my HF rig (Kenwood TS-820) do.

>of poor manuals make me a bad person or am I just stupid?

I don't have an HF rig yet, but the ones I've seen were certainly not designed to be user friendly. I don't know why they do that. It certainly doesn't make you stupid.

As far as talking on repeaters goes, it helps to just listen for a while. I bought my HT after I passed the test. By the time my license arrived, I had some idea what to do. Practices vary from place to place, so listening and asking locals is really the only way to tell what to do.

>get no reply and then 30 seconds later hear one of you old farts jump
>on and start talking to a fellow geriatric case?...
>
Speaking for old farts everywhere, I think you're making too strong a
case here. Old farts are just like everyone else; some are nice and
some aren't. If you want to talk to someone on a repeater, just say so.`
"Monitoring" means just that. Call CQ, or say "anyone wanna talk?" or
something like that if you just want someone to chat with; "monitoring"
does not mean "CQ". It's to let someone who might be looking for you
that you are on the repeater.

HF is a real mess these days, especially 20 meter phone. CW is a little less
awful; stick with that.

Mike, N4PDY (licensed for 30 fun-filled years).

> I haven't sat down in front of a HW101 in years, so I'll restrict
> myself to general advice. Gary

I had an HW101 back in the dark ages and it didn't need an antenna tuner (possibly because I couldn't aford one). With the selectable inductance and variable capacitors in the pi network output, it has essentially a medium-range antenna tuner built in as most of the tube-type rigs of that day did. I once loaded it up barefoot to a bobwar fence when my antenna blew down. That was back in Texas where they have real bobwar fences. Don't know what the SWR of a bobwar fence is... I couldn't afford an SWR meter either.

Transistors die under high SWRs. Tubes usually only complain a bit.

SB SAT @ AMSAT $ANS-317.01
DO-17 TELEMETRY FORMAT

HR AMSAT NEWS SERVICE BULLETIN 317.01 FROM AMSAT HQ
SILVER SPRING, MD NOVEMBER 13, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-317.01

WD0E Explains Some Of DO-17's Telemetry Format

In response to several requests, the following is a breakdown of inform-
ation in the STATUS line presently being transmitted by DOVE. Note this
applies to DOVE and to this version of the software only.

Counting from the left, the first pair of numbers being 0. All data is in
hex.

0 - Receiver status. Bits 0 - 3 = Filter status of RX
A-D: 0 = 1200, 1 = 4800. Bits 4 - 7 = gain settings of IR
sensor. Normal = 8 = log mode. Normal for whole
position is 80 = IR in log, filters in 1200. NOTE: receivers
in DOVE are for commanding only.
1 - Unused
2 - Unused
3 - BCR Set point. Is adjusted by housekeeping task software to
provide best power transfer from panels to regulators.
Normally 1E during eclipse and in the 80's in the sun.
Roughly corresponds to telemetry channel 22h.
4 - Number of hours since last command. See 18.
5 - BCR status bits. Indicates status of various latches in the
BCR used to gather telemetry.
6 - Transmitter power level, 0 to F. First number is TX1, second
is TX2, although they will normally be the same.
7 - Which transmitter is in use. Bit 0 (LSB) is TX1, bit 1 is
TX2. So a hex 02 indicates TX2 is in use, 01 would be TX1.
8 - Unused
9 - Status of switches in the voice/packet/s-band module (4).
Will allways be D0 in this verson.
10 - Unused
11 - When WOD is in use, shows the number of samples taken/16.
This provides a positive indication a collection has started,
how far it has proceeded and when the sample bucket is full.
12 - Low end of nominal transmitter power range. See 13
13 - High end of nominal transmitter power range. The house
keeping software moves the transmitter power between these
two numbers to control the charge/discharge of the batteries,

and keep the transmitter power as high as possible.
14 - Time between executions of the power control software in
seconds.
15 - The transmitter power level that is set if the batteries get
abnormally discharged. Normally 5.
16 - Count of errors on the s/c internal bus. This will increment
on DOVE because module 4 no longer consistently responds.
17 - Overflow from 16.
18 - Days till the command timer will expire. Defaults to 2 on
software start. Normally kept at F. This is another of the
software 'watchdogs' that attempt to assure the 2M
transmitter doesn't get stuck on forever. If the s/c does
not hear a command in this number of days, it jumps to the
ROM boot loader firmware which turns all transmitters off.
19 - The module number the errors in 16 came from.
20 - Internal state related to transmitter lock-on avoidance.
Normally 1.

Note that these are somewhat different on the Microsats, and change from
time to time as software is modified.

[The AMSAT News Service (ANS) would like to thank Jim White (WD0E) for this
bulletin item.]

SB SAT @ AMSAT $ANS-317.02
AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 317.02 FROM AMSAT HQ
SILVER SPRING, MD NOVEMBER 13, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-317.02

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets
are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the
start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO,
OPS Net enthusiasts are asked to move to the alternate frequency of 145.955
MHz.

Date UTC Mode Phs NCS Alt NCS

28-Nov-93 0230 B 39 WJ9F VE2LVC
12-Dec-93 0435 B 180 W9ODI WB6LLO
3-Jan-94 0200 B 160 WA5ZIB N7NQM

Any stations with information on current events would be most welcomed.
Also, those interested in discussing technical issues or who have questions
about any particular aspect of OSCAR statellite operations, are encouraged
to join the OPS Nets. In the unlikely event that either the Net Control
Station (NCS) or the alternate do not call on frequency, any participant is
invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink
on a Mode-B downlink frequency 145.960 MHz.

4312. FCC question pools are here

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-15 02:19:42 UTC
From: msattler@netcom.com
Message-ID: <msattlerCGIH4v.3At@netcom.com>
Source record: 274242

Several people have asked about exam pools of late.

The complete exam pool questions (less the pictures) can be ftp'd
from world.std.com. For example, the General exam questions are
/pub/hamradio/arrl/Server-files/pool-general-1.Z and
pool-general-2.Z. The UNIX "uncompress" command will convert the
.Z files into readable text.

For Macintosh users there are HyperCard stacks (complete with
the pictures) for all the FCC tests. Check in the directory
/pub/hamradio/mac/theory-and-morse. For example, the General
exam can be found as General_Ham_Test_.hqx.

Anyone got any pointers for DOS/Windows?

4314. Elmers are dead, god help us HAMS!

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-15 04:37:27 UTC
From: levin@cosmic.physics.utah.edu
Message-ID: <1993Nov15.043727.2888@math.utah.edu>
Source record: 274245

Hi,

I have received several responses to my earlier post and feel that
I need to correct and clarify a few points.

First, I apologise for the old farts comments. Just as not all
of us new hams are ignorant, not all older hams are old farts.

I do apologise for this. I had ment to make the point that
new hams seem to be looked down on by the ham community as a
whole.

Second, several people have commented on my tech license plus
transmission on HF bands. I have NOT done this except in
the company of a HAM with the appropriate license. This was
also ment to make a point however in the heat of the moment
I seem to have mis-quoted myself. I have the utmost respect
for the rules of amature radio and would never intentionaly
violate them.

Most of your responses have been very positive, thanks for
all the replies and I look forward to discussing this issue
in more detail. I don't believe in complaining about a problem
without working towards a solution. I hope that all of us
in this news group can work together and make this aspect
of the hobby as informative and fun as possible. The internet
is a powerful medium for the excange of ideas. I would hope
that in this group we can use it this way and not turn it
into a huge international flame war. I Look forward to hearing
from everyone out there in internet land.

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7618 (N09E49) continues
to be the dominant spotted region on the disk. It has produced
occasional C-class flares during the period. Newly assigned
Region 7619 (N10W19) emerged.

Solar activity forecast: solar activity is expected to be
low to moderate.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours, with one period of active at
high latitudes.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled.

Event probabilities 15 nov-17 nov

Class M 50/50/50
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 15 nov-17 nov

A. Middle Latitudes
Active 10/15/10
Minor Storm 05/05/05
Major-Severe Storm 05/05/01

B. High Latitudes
Active 15/15/15
Minor Storm 10/05/10
Major-Severe Storm 05/05/05

HF propagation conditions continued normal over all
regions. No SWFs were observed in the last 24 hours, although
there remains a moderate probability for isolated SWFs on
daylit paths due to minor solar flare activity. Conditions
should continue normal over all regions throughout the next 72
hours, through 17 November inclusive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Some Special Notes For This Week Only

Internet users: This item is e-mailed to rec.radio.info and posted by the moderator on R.R.I. and rec.radio.amateur.misc. There have been problems reported about people getting this item in their mailbox who do not subscribe to SWL-L or duplicates when they are subscribers. We have no control of that, please contact your postmaster or the postmaster at the listservers. Our site, The Dorsai, has been having some mail problems with UU.NET so we are sorry of any delays.

RIME, Intelec and I-Link readers: Due to a few BBS's choking on the message length and spitting out duplicates of partial posts, we will begin splitting up the NEWSLINE to at least 2 messages begining this week.

Since we have been forwarding NEWSLINE to these networks, Bill has received quite a number of inquiries about other uses of this electronicly published version. For information about reposting NEWSLINE, please read the last article in this week issue.

Due to the nature of this first story, we are also submitting this week's NEWSLINE to the various Broadcast echoes and r.r.b.

The electronic edition of Amateur Radio Newsline is transcribed from source material by Dale Cary. Newsline is reprinted here courtesy of Bill Pasternak, WA6ITF, Editor of Newsline. Editorial comment should be E-mailed to newsline@mcimail.com or B.PASTERNAK@genie.geis.com. Voice or FAX to +1 805-296-7180.

The following is late news about Amateur Radio for Radio Amateurs as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR RADIO NEWSLINE, INC. -- formerly the WESTLINK RADIO NETWORK. The electronic version of newsline is posted on this CBBS twice monthly. For current information updates, please call (213) 462-0008, (407) 259-4479, (708) 289-0423, (513) 275-9991, or (718) 353-2801. For the latest breaking info call the Instant Update Line at (805) 296-2407. To provide information please call (805) 296-7180. This line answers automatically and will accept up to 30 minutes of material.

Check with your local amateur radio club to see if NEWSLINE can be heard weekly on the air in your area.

Articles may be reproduced if printed in their entirety and credit is given to AMATEUR RADIO NEWSLINE as being the source.

For further information about the AMATEUR RADIO NEWSLINE, please write to us with an SASE at P.O. Box 463, Pasadena, CA 91102.

Thank You

* * * * C L O S E D C I R C U I T A D V I S O R Y * * * *
* *
* The following is a closed circuit advisory and NOT for *
* transmission on amateur radio. We have received word from *
* our support fund administrator that the monies needed to *
* pay the our monthly bills is still dangerously low. *
* Yes, there are many sources of ham radio news, but for *
* the past sixteen and a half years, nobody has been able to *
* bring you this news as quickly and as accurately as *
* Newsline. The ham magazines have a two to four month lead *
* time. The various ham radio newsletters are at least a *
* week or two behind what's happening. While the ARRL has a *
* very fine audio news dissemination operation with it's W1AW *
* Official Bulletin Station, it is primarily geared to high *
* frequency operation. *
* Only Newsline brings up to the minute ham radio news *
* direct to you over your favorite repeater. That means you *
* can listen to it at home, in your car or even walking down *

* the street on your hand held radio. *
* But doing this costs money. It takes over $700 a month *
* to keep Newsline alive. Recognizing this Dr. Norm Chalfin, *
* K6PGX established the Newsline Support Fund. It's kept *
* separate from Newsline and exists only to pay the week to *
* week operating expenses of the operation. It again needs *
* the support of all of you who want to see Newsline survive *
* so that these weekly bulletins can continue to air. *
* The address for the Newsline Support Fund is Post Office *
* Box 463, Pasadena, California 91102. Your assistance is *
* needed as soon as possible. We thank you all for your *
* ongoing generosity and support. *
* That ends the closed circuit. *

REPEATER OWNER FINE QUESTIONED

There are some significant new developments in the case of New Jersey repeater owner Bill Krause WA2HDE. He's the ham who was issued a five thousand dollar fine because the FCC says that his Manhattan, New York repeater transmitter was heard on a frequency in an aeronautical communications band.
As we reported last week, the FCC claims that on August the 30th, its New York City Field Office received a complaint from the Federal Aviation Administration about a signal on 243 MHz that had appeared on receivers at two airports over the previous five days. Subsequent investigation by Engineer Alexander Zimney determined that the repeater was being operated by WA2HDE. The commission says that it issued the Notice of Apparent Liability to Monetary Forfeiture -- the FCC's term for a fine -- because of the potential of interference to aircraft emergency communications.
But there is something that the FCC's Zimney did not do. He issued the fine before bothering to notify Krause that he might be in violation of Part 97 rules. In other words, its possible that a commission employee in his apparent eagerness to please the FAA may have violated the federal governments own Administrative procedures Act. Rules that specifically call for a Notice of Violation to be issued and time given for a response before any punitive action is taken except in truly egregious cases. Note that the terms willful and malicious interference were not used by the FCC and therefore the incident cannot be legally interpreted as egregious. This is extremely important as you will hear.
To complicate matters even further, it turns out that Bill Krause is a person well known to the FCC. William A. Krause is one of the nations most respected broadcast engineers. He is the Chief Engineer of WABC AM, the clear-channel flagship station of the American Broadcasting Systems radio network. His repeater is also well known in that it is dedicated to public service work

and is a very popular spot for communications for these kind of events.
The FCC said that it had no way to reach Krause when its engineers discovered that it was his radio system that was interfering with the air-band radio system on 243 MHz, but as the chief engineer of a radio station Krause must deal regularly with the New York City FCC Engineer Alexander Zimney. Its a safe bet that Zimney has all the telephone and FAX numbers needed to contact Bill Krause sitting in the phone book on his desk.
We can't end without mentioning what the technical problem was that lead Zimney to issue the five thousand dollar NAL. Newsline has learned that the transmitter in Krause's Spectrum Communications repeater had malfunctioned. The result was a 700 milliwatt spur that occurred only when the transmitter was key up. That's right, 700 milliwatts and only in key up when the transmitter was not technically even on the air!
By now you must realize that there would be absolutely no way for Bill Krause or anyone else to know that the transmitter was putting out a spur unless someone notified him of the problem. Zimney could have called Krause on the phone and asked that he assist in solving the problem. Instead, the New York City FCC engineer acted in a way that has made him rather unpopular with the tri-state area's ham radio community.
Meantime, Krause filed a reply to the NAL. In it he says that at the time of the incident his repeater appeared to be operating normally. He tells the FCC that he had no reason to believe that it was producing unwanted spurs outside of the 222 MHz amateur radio band.
Nobody is saying that the unintentional interference by Krauses repeater transmitter to the 243 MHz aeronautical channel is insignificant, but there is a big question regarding the way in which the New York City FCC Field Office reacted to the situation and the level of the punitive action imposed.
The next move is up to FCC Engineer Alexander Zimney. We will keep you posted on this one.

*****
HAM ADMITS JAMMING THE BIG MAC

Terry Van Sickle, WB5WXI has pleaded guilty in federal court to one count of willful and malicious interference to the two way radio system at a Dallas Texas Mc Donalds restaurant. Van Sickle is the former WFAA television news photographer who the FBI questioned on August 22nd after they found him parked in his van near the fast food restaurant. The FBI was attracted to the vehicle after its investigators noted a large number of antennas on it.
As previously reported, the FBI interrogated Van Sickle and a friend for about three hours before releasing them. At that time no charges had yet been brought. Van Sickle even claimed his innocence by way of an article appearing in the September 30th

issue of the Dallas Observer newspaper. He even told the Observer that it is a common practice for electronic enthusiasts to talk to fast food restaurants over the radio relay food ordering systems. He said that these same radio buffs regularly post the frequencies of fast-food restaurant radio systems on computer bulletin boards and that the frequencies used by the Mc Donald's was readily accessible to almost anyone.
But on October the 27th that all changed when WB5WXI was charged by the government as being the source of the interfering signal. At a hearing, Van Sickle admitted his guilt and entered into an settlement, apparently to avoid a lengthy trial.
In the plea agreement, Van Sickle guaranteed to fully cooperate with any further investigation of the matter, to surrender all interest in the thousands of dollars worth of his two way radio equipment and computers that the government had ceased as evidence in the case, and on demand of the court to submit to interviews by the United States Attorneys office regarding his ability to satisfy any fines or restitution order that might be imposed.
Van Sickle has been ordered back to court on January 12th, 1994 for sentencing. At that time he could face up to a year in prison, a fine of up to one-hundred thousand dollars or both. In addition he can be ordered to pay restitution to the Mc Donalds for any damages and loss of income that his actions may have cost the company and could also face a civil suit if Mc Donalds eels that the compensation awarded it was insufficient.
Finally, as is usually the case, the FCC will probably begin its own investigation of Van Sickle's activities. If they find him in violation of their rules he could loose any radio licenses he now holds. Van Sickle could also face thousands of dollars in additional fines as well.

*****
PHONE OUT

This note to all of you who get the newscast by calling into our area code (805) 296-2407 automatic telephone delivery number. Please be advised that the equipment on that line will be down for maintenance from late on Tuesday November the 16th till about 01:00 Eastern Time on Monday November the 22nd. For that six day period we ask that you call area code (213) 462-0008, (708) 289-0423 or the regional newsfeed line serving your area. We thank you for your understanding and cooperation during this short duration of service interruption to the 805 area code line that will last less than one week.

*****
VE TEST FEE INCREASE

The cost of getting a ham license is going up in 1994. The FCC has announced that effective January 1, 1994, the maximum

allowable reimbursement fee for an amateur operator license examination will be $5.75. That's up fifteen cents from the current $5.60.
As before, volunteer examiners and volunteer examiner coordinators may charge examinees for out-of-pocket expenses incurred in preparing, processing, administering, or coordinating examinations for amateur operator licenses. The amount of any such reimbursement fee from any one examinee for any one examination session, regardless of the number of elements administered, must not exceed the maximum allowable fee. Where the VE and the VEC both wish to be reimbursed, they must jointly decide on a fair distribution of the fee.
The ARRL VEC says that will begin charging $5.75 after the new FCC allowable fee becomes effective and other VEC's are expected to do the same.

*****
EARTHWINDS DELAYED

Problems with its mooring assembly has delayed the launch of the ham radio equipped Earthwinds Hilton balloon from an airfield near Reno, Nevada. Earthwinds was scheduled for a launch attempt on Saturday, November 6th at 14:00 UTC but bolts anchoring the craft failed as the top balloon was being filled with helium gas. It will now be at least six to eight weeks before another launch attempt will be made.
By way of background, the manned balloon will carry 2-meter equipment for communicating with the Amateur Radio community and the ham operators aboard the Mir space station. All communications will be conducted on 2-meters simplex, 145.55 MHz.
Eathhwinds planners hope that the balloon will circumnavigate the globe at nearly 35,000 feet above and near the 45th parallel. Saturday's flight path would take the balloon from Reno, Nevada to New Mexico.
If Earthwinds ever does make it into the air and on the air, QSL cards will go via Gordon West, WB6NOA.

*****
DOVE RETURNS TO THE AIR

After a long absence, the Dove OSCAR 17 satellite is back on the air. It is presently sending packet telemetry and short text bulletins on 145.825 MHz FM. DOVE's transmissions can be copied by anyone with a 2-meter FM receiver and a standard packet radio TNC. More work is required to get the satellite fully operational, but this is a major step in getting Dove fully back on line.

*****
RFE LAYOFFS

Radio Free Europe will lay off more than half its employees and leave its Munich base by 1996. The headquarters for the radio services that for decades given eastern Europeans uncensored news with a decidedly anti-Communist slant will move either to Prague, capital of the Czech Republic, or Washington, D.C..
Getting down from the current annual budget of $210 million to the $75 million mandated by President Clinton also will mean closing the New York office and moving its research center out of Munich These are two of the world's most expensive cities.
Radio Liberty, which broadcasts to Russia and other former Soviet republics, will be unaffected by the cuts and consolidation given the continued political instability in the region.

*****
DX - LESOTHO

In DX, prefix hunters should note that in commemoration of the 27th anniversary of Lesotho independence, a special prefix will be used until mid November. 7P27LI will be on 14.010 to 14.025 MHz, and on 21.010 to 21.025 MHz from 10:00 hours to 14:00 hours UTC. QSL to Ray Shankweiler, Box 333, Maseru 100, Lesotho.

*****
POSTING NEWSLINE

This note to all who are getting the printed version of Newsline by packet radio or other data postings. Over the past month we have received numerous calls from individuals who have downloaded our material from various services and who think that they need our permission to repost it to packet, use it for code practice or whatever.
The answer is that you do not need any specific permission as long as you do not change the content of the material in any way. Newsline is not mode specific. We do not care how you re-distribute it just so long as you do not add or delete anything. Leave it as it is and use it as it is.
Oh, we have no objection to your deleting the closed circuit lead message, but anything else must be retransmitted or reposted exactly as you receive it, including the closing credits and the text of any of the interviews that are a part of the newscast.
We also hope that this clarifies things for those of you who have questions. If not, please contact us by regular US mail or Electronic mail only. The cost of returning telephone calls is prohibitive.

4318. RACES Bulletin #300

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-15 07:12:57 UTC
From: enge@almaden.ibm.COM
Message-ID: <199311150713.XAA10976@ucsd.edu>
Source record: 274248

Bid : $RACESBUL.300

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6SIG @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832 (916)262-1600
Landline BBS open to all: (916) 262-1657
RACESBUL.300 DATE: Nov 15, l995
SUBJECT: OPS - STRIKE TEAMS - Part 2/2
Our Strike Team is comprised of RACES personnel who have
taken extra steps to maximize their abilities and skills. What
extra steps? Fireground safety, public safety radio operation and
agency orientation are a few of the topics covered in training.
Personnel must have served in RACES for at least a year, and be
licensed as Technician or higher for a similar period. They must
show a willingness and ability to serve as a RACES person before
serving on the Strike Team. Membership in the Strike Team is by
no means automatic. It requires a special level of participation,
and members must have shown that they can meet this demand before
they are accepted.
Strike Team members are normally assigned to other RACES
functions, including operation of stations, EOCs and the
Communications Center. If you belong to a Strike Team you will
still be expected to attend the drills, training and activities
that are part of your normal RACES assignment as well. In the
process, you will be confident that no matter what may happen,
you will be called!
End of extract from an article by Ted Benson, WA6BEJ, Deputy
RACES Radio Officer/Mobile Operations. published in vol. 1, issue
2, TAC ONE, THE OFFICIAL VOICE OF SAN DIEGO COUNTY RACES. Ted's
article began with the perspective that "we face a new set of
disasters and emergencies for which we must plan. Forest fires,
civil disturbances, and downed aircraft are but a few of modern
challenges RACES must face. With these new challenges come new
techniques, of which the Strike Team is perhaps the newest of
these techniques."
EOM

>Could someone please enlighten me on DSP units such as JPS, Datong, and
>Timeware(?) sell? How well do these puppies work?
>
>Are there kits and/or plans to build your own available? From where?
>
>
>
```

I recently bought a Texas Instruments DSP Starter Kit (DSK), it's
a very nice thing to experiment with, it comes with assembler and
debugger, and example software (sources) such as an audio spectrum
analyzer. It's a TMS320C26, combined with a 14 bit AD/DA.
I have plans (and it must be easy) to implement the W9GR software,
CW filters and LMS filter.

The DSK costs $99.

Newsgroups: rec.radio.amateur.misc,rec.radio.amateur.digital,rec.radio.amateur.packet,rec.radio.shortwave,rec.radio.info
Followup-To: rec.radio.amateur.misc
Approved: rec-radio-info@ve6mgs.ampr.ab.ca

Macintosh Amateur Radio Software - November 1993
Version 1.04.1

Please feel free to distribute this list as widely as possible. Many of you have asked if it is OK to cross-post this list? I don't mind, but I would like to know where it is going. If you think it should be cross-posted to other USENET groups, please let me know so I can try and manage these. We don't want to have any duplication or our welcome will be wore out!

Those of you that can tell me about ANY of these programs compatibility with System 7 would be appreciated! I am going to be adding a System 7 compatability section to EACH description in future releases. If the application is KNOWN to execute properly under System 7, the System 7 anotation will be placed as the last line of the product description. More clarification on levels of System 7 compatibility in the future editions... but this is a start!

Some of the information in this list was gleaned from flyers supplied by the software vendors, or in some cases from reviews in amateur radio publications or the README files included with the archive. Some of the information has not been verified for a long time; please check with the vendors/authors for the latest product specs, pricing, etc.

NEW/CHANGES: I've started adding more version numbers so that our users will know if they have the most current release. Thanks to those that have already sent them in... I'll accept all corrections!

This list contains info on updated for several applications: updated information on Kantronic's Host Master(thanks John-WD1V) and Lar's newest release of Morse Trainer 1.1. Ivo-ON1XK and Adam-PA2AGA both have been busy with new releases of IM/Mac and NET/Mac repsectively. I heard that NET/Mac Pro is coming down the road soon... anyone care to confirnm this? For those of you who don't know about it... it is a commercial endevaor written to support high-speed TCP/IP radio links by some of the hams in Califor

nia. It is a product that has been anticipated for awhile and is eagerly awaited although Adam has been doing an admirable job! Thanks Adam, Ivo and Lars for some great products!

I have been informed that The World, world.std.com, is the newest site carrying the Mac Ham Radio Software. Scott-WY1Z is maintaining these file as the Librarian of the Boston Amateur Radio Club. Look in the following path: /pub/hamradio/mac. Check at the bottom of this list for more information on ftp'able sites carrying Amateur Radio software. The ARRL ListServer is also carrying the latest version of this list... in case you loose this one!

*** Collections ***
<MacNet v5.31>
Join Macnet and get included in the latest version of "Macnet Roster", a HyperCard 2.x stack that now has > 400 members and is the proverbial "Who's Who" of hams using Macs. You'll find "Macnet Roster" a great tool for finding out who, what and how other hams are using their Macs with their ham stations. It even includes this file!
Send $30.00($40.00 DX) check or money order to: WD1V, John Seney, 144 Pepperidge Drive Manchester, NH 03103 USA.
All disks shipped First Class Mail PPd. Get the COMPLETE Macnet Software Collection ppd. on 10 disks!
Based on your interests, you'll also receive public domain shareware received by our members.
System 7

<Project Mac>
Contest logging, antenna design, satellite tracking, clip art, etc. Microsoft BASIC required for many of the programs. Most of this software is now available in the MacNet collection.
Send three formatted 800K Macintosh disks with stamped, self-addressed disk mailer to Stan Horzepa, WA1LOU, 75 Kreger Drive, Wolcott, CT 06716. (Compuserve: 70645,247)

<Amateur Radio Software for Macintosh>
Extensive catalog including logging, Morse code, gray line, test preparation, satellite tracking, contesting, and packet radio programs.
ZCo Corporation, P.O. Box 3720, Nashua, NH 03061. NOTE: This company has been rumored to be out of business!

<Amateur Radio #1>
Contains satellite tracking, Morse code, attenuator design, and Ohm's law calculator programs.
Kinetic Designs, P.O. Box 1646, Orange Park, FL 32067.

*** Test preparation ***
<Ham Test Stacks>
HyperCard stacks containing the entire question pool for each license class. Can be used for preparation or generating actual tests.
The current releases are: Novice v4.1(new questions eff. 7/1/93), Technician v4.0(new questions effective 7/1/93), General v2.4, Advanced v2.4, Extra v2.4
If you wish to receive these PUBLIC DOMAIN stacks, please send a SASE (self addressed STAMPED envelope - 2 ounces postage = .52) and 800K diskette to the author: Diana L. Carlson, 3 Spruce Street, Hudson, NH 03051. Diana will no longer send out the stacks unless the envelope has sufficient postage for return mail (in general, that means .52-.98, depending on size of envelope) and for those who send a standard business envelope, she takes no responsibility for the condition of the diskette through US mail.

Available via anonymous FTP from various sites, including uxc.cso.uiuc.edu (/pub/ham-radio). NOTE: The newest releases of Novice and Technician stacks are available at uxc.cso.uiuc.edu (5/6/93) Author is available via Internet: dls@genrad.com
System 7 savy with HyperCard 2.1

<MacHam>
Test generators and study aids for the Technician, General, Advanced, and Extra class written elements. Includes the complete question pool for each license. Hypercard based.

Coyne Co., P.O. Box 2000-200, Mission Viejo, CA 92692.
System 7 with HyperCard 2.1

*** Morse code practice ***
<N6MZV Morse Trainer>
Lets you practice any combination of letters, numbers, and/or punctuation characters. Can send user-created text files.
RT Martin, N6MZV, 10382 Orange Avenue, Cupertino, CA 95014. Also available via anonymous FTP from ftp.apple.com (/pub/ham-radio). Shareware.

<Morse Code Tutor v1.3> - used to be called Morse Tutor
Sends random groups of letters, numbers, and/or punctuation characters.
Available via anonymous FTP from ftp.apple.com (/pub/ham-radio). Or send formatted 800K Macintosh disk with stamped, self-addressed return disk mailer to Jack Brindle, WA4FIB, 726-175th Street SW, Bothell, WA 98012; Compuserve: 73365,606.

<MorseMania V1.0>
Designed for those already familiar with Morse code who want to improve their speed. Allows code practice at various speeds and audio pitches. Can generate random sequences or play the contents of user-created text files. Freeware.
Available via anonymous FTP from whirlwind.stanford.edu (/pub). Contact Edward Plumer, KM6IQ, for more information; Internet: plumer@isl.stanford.edu.

<MacMorse>
Randomly sends chosen characters. Lets you create your own practice files.
David A. Kall, 700 Marine Parkway #314, New Port Richey, FL 34652.

<MacMorse v1.3>
MacMorse is designed to help you learn Morse code and improve your receiving speed. It has several ways that it can send letters and punctuation. Shareware.
Doug Havenhill, Dynamics and Control, 7143 West Sunnyside Drive, Peoria, AZ 85345.

<MacSamuel>
Sends random words, random character groups, and user-created text files. Can also create simulated QSOs with randomly generated text and callsigns.
Avant Systems, P.O. Box 5437, Pittsburgh, PA 15206.

<Zihua Morse>
Designed to teach Morse code to beginners and to improve the accuracy and speed of advanced users. Responses can be typed into the computer; the program will calculate accuracy and timing statistics for each session. Optional speech synthesizer reads the characters out loud for an accuracy check.
Zihua, P.O. Box 51601, Pacific Grove, CA 93950.

<Sparks-II v2.0.5>
More Code training program.
Available for anonymous ftp at rahul.net /pub/davidj/radio

<Morse Master v1.0>
The newest of the morse code training programs. MM calculates the real speed as follows: Real speed = Number of Words/end time - start time. And the lengh of word is generating randomly, so if you set even 5WPM, sometimes another value will appear. However you should believe the slidebutton's value. If you repeat many times, the average speed should be 5WPM

(if not... anyway, believe the slidebutton's value).
Archive is available mac.archive.umich.edu, path:
mac/util/organization/morsemaster1.0.sit.hqx
The author can be reached thru the following e-mail addresses:
h79261a@kyu-cc.cc.kyushu-u.ac.jp. (Eiji AOL account is no longer valid - moved back to Japan after his studies.)

<Morse Trainer-US v1.1>
MorseTrainer is a powerful tool for learning and training Morse code. Features: Three different training modes: user text, random text, library text; Arbitrary signal pitch and timbre; Arbitrary speed and tempo; Multi-alphabet support; Random text generator; Text library editor; On-line alphabet; On-line manual; Help Balloons; And a lot more. New features in 1.1: Enhanced sound generator, volume control and risetime control. The pitch is set in steps of 10Hz instead of using MIDI frequencies; Speed and te

mpo limits increased to 80 words/minute as a result of the enhanced sound generator; User-selectable font in the Misc settings dialog.
FREEWARE!
This version uses TrueType fonts instead on bitmaps fonts so that the user can distinguish 0(zero) from O(character). Furthermore speed and tempo can be given in either characters/minute or words/minute.
Archive is available mac.archive.umich.edu, path: mac/util/organization/
Author is available via internet: sund@tde.lth.se
System 7 savy

<CW Speed Builder v3.0>
This program is for improving Morse Code (CW) reception skill. The major difference between this and other Morse Code training programs is that this one will not continue sending until you provide the correct answer.
Major changes which have been suggested and implemented since last version include: after three incorrect responses the program shows the correct character; the list of characters at the end which will show those you know and those you need more practice on; the frequency of the tone has been changed; volume of the tone has been reduced; the character " - " has been added (dah dit dit dit dah)
Comments can be sent as follows: America Online:K7UPJ, Internet:k7upj@aol.com, Packet radio:K7UPJ@KA3T, Compu$erv:70521,2356, Mail:Box 84, Cascade, MD 21719

*** Packet and other digital modes ***
<NET/Mac 3.2.31>
Allows simultaneous TCP/IP, AX.25, and NET/ROM connections. Requires a TNC with KISS mode. Copyright, but free for noncommercial use. The latest releases have added support of multi-port serial boards like AE's QuadraLink. It is now possible to have up to 10 TNCs connected up to a Nubus Mac!
Adam van Gaalen, PA2AGA, (Internet: adam@IGG.TNO.NL) has been making the modifications to NET/Mac. This version (and others) is available via anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/pa2aga), mac.archive.umich.edu and sumex-aim.stanford.edu.
System 7

<Domain-to-Hosts Converter 1.0r3>
This application will create a hosts.net file from the domain.txt file that PC owners use with NOS. Created by Ken-NS1C is available on many TCP/IP packet switches in New England.program. Version 1.0r3 is the latest release.
System 7

<IM/Mac 1.0b27t>
Mailer program for use with the SMTP protocol. Alternative to the BM program that comes with NET/Mac. Written by Ivo van Ursel, ON1XK. Ivo is continuosly updating his mailer program. His newest release supports built-in BinHex support, selectable sound chimes for incoming mail, "quoting" of forwarded messages and lots more. If you are not using this program... why not? Check for the latest release in the directory before "blind" ftp'ing. This software supports System 7's Ballon Help and is System 7 savy!
Available via anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/pa2aga).
Author is available via internet: on1xk@igg.tno.nl <<-- new address for Ivo
System 7 savy

<SoftKiss 1.8>
Control panel device that emulates a TNC running in KISS mode. For use with packet-radio modems such as the Baycom kit and PacketMac Modem. Version 1.8 July 9 1993 update since 1.6. KD6PAG found a bug in quoting recieved escape and end characters is sofktiss 1.6. The bug and the fix and patch are all correct, thanks for some great detective work. Lots of doc files and drawings included in this archive! Requires the Serial Tool from Apple's Communications Toolbox!
Available on the HAMNET forum of Compuserve, America Online and via anonymous FTP from akutaktak.andrew.cmu.edu (/aw0g).
System 7

<Savant 1.0.1>
A new packet terminal front-end by the author of Virtuoso. Savant has a split window interface, but it's also a multi-window, multi-connection
interface and will work with almost any TNC, unlike MacRatt or HostMaster.
A demo version of the product is available at cpre1.ee.iastate.edu (pub/ke0ph) or via US Mail, send a SAS disk mailer and disk to CM Technologies, Inc., RR#1, Box 83A, Kelley, IA 50134 (515) 597-2051.
System 7, 32-bit, '040 cache clean and it supports the required AppleEvents.

<MacRatt with FAX>
Terminal program for use with AEA's PK-232 multimode controller. Supports packet, CW, RTTY, AMTOR, and facsimile. Includes cable.
Advanced Electronic Applications, P.O. Box C-2160, Lynnwood, WA 98036.

<Host Master 1.2>
The Kantronics Host Master software provides an easy to use, multifunctional terminal program for the TNC. Host Master Mac is a simultaneous multi-mode terminal program for the Mac written by Kevin Krueger, N0IOS and marketed by Kantronics. It is a commercial product available from most of the ham radio stores and supports single and multiple packet connects, packet monitoring, and HF operation (with KAM) each on a separate window, all at the same time. This package retails for $69.95 in the US and is int

uitive, friendly, and well supported by Kantronics. Current version as of 10/20/93 is 1.2. It is hoped that a future version will support FAX but currently Hostmaster supports PACKET, AMTOR, RTTY, PACTOR (KAM ver. 6.0), CW, and NAVTEX.
Features: text and binary file transfer; packet conferencing; color or B&W windows; cut, copy, paste between windows; call exchange and data/time stamp; auto startup/shutdown commands; transmit buffers for each mode; simultaneous dual port, multiple connects; supports KPC-2, KPC-2400, KPC-4, KAM and Data Engine. Requires: Macintosh Plus w/ System 6.05 or better. Current Kantronics firmware.
System 7 compatible, with baloon help

<PacketTracker 1.05>
PacketTracker ver 1.05 is a program that monitors packet activity and keeps track of what is going on. It draws a graphical map showing who is talking to who and displays statistics of all current stations and keeps a running tally of activity.
PacketTracker was written for both the casual packet user and the network manager or BBS operator. The casual packet user will be able to learn a great deal about what is happening in packet around him; which stations are generating the most data and what some of them are. he will be able to see graphically what stations he can hitdirectly and which ones he cannot.
For the network manager and BBS operator, PacketTracker provides extensive insight to the operation of the local network and problems such as excessive retries on a path. It also allows for extensive logging of channel utilization and other pertinate information.
NOTE: This application requires the Apple's Serial Tool from the Communications Toolbox.
System 7

*** RTTY ***
<MacTTY>
Decodes Baudot or ASCII transmissions. Can also be used for packet radio and other digital modes (including landline data communications). Includes split screen, a 15,000-character type-ahead buffer, and canned messages.
Summit Concepts, Suite 102-190, 1840 41st Ave., Capitola, CA 95010.

<WeFaxWorks>
Weather facsimile terminal program for use with Kantronics TNCs.
Kantronics rfconcepts, 1202 E. 23rd Street, Lawrence, KS 66046.

<MacMultiCom 1.0>
MFJ sells MacMultiCom 1.0 for their 1278 multimode controller. MacMultiCom supports all of the modes of the 1278: packet, rtty, ascii, pactor, amtor, gray scale faxes, and many different formats of color sstv. The program requires a minimum of a MacPlus and a hard disk. Requires a color Macintosh and System 7 for best results.
System 7

*** Logging ***
<Ham Radio Station Logbook>
HyperCard stack that stores and displays radio contact information. Automatically stamps entries with time and date. Contacts can be sorted by frequency, call sign, or date of contact. Includes report formats, a "Q-code" reference list, and on-line help.
SanSoft, 892 E. Quail Place, Highlands Ranch, CO 80126. (The same program appears to be available from Heizer Software, 1941 Oak Park Blvd., Suite 30, Pleasant Hill, CA 94523.)

<FDLog!>
Contact logging and duping program. Can transmit any of ten programmable CW messages. Generates real-time statistics on QSO rates.
System One Control, 3900 85th Ave N, Suite 200, Brooklyn Park, MN 55443.

<MacContest 3.5>
Allows real-time or post-contest logging of a wide variety of contests. Checks for dupes, figures scores instantly, and offers various printouts. Interfaces to TNCs for CW and RTTY contests, to DX packet clusters, to Kenwood transceivers, and to MacinTalk for easy post-contest entry.
Gerald Eberle, HB9CEY, P.O. Box 13, CH-4417 Ziefen, Switzerland.

<LOGic>
(Macintosh version scheduled.) Lets you define the rules determining dupes (such as once per band or once per contest). Displays heading, distance, and other information about the country being worked. Automatically enters contact time; if interfaced directly to a radio, also enters the frequency, band, and mode. Shows status toward earning amateur-radio awards. User-definable database fields. Exchanges data with other programs.
Personal Database Applications, 2634 Meadow Bend Court, Duluth, GA 30136.

<HF Logger 1.2>
A real fine HyperCard logging program! (hey... thats all I got!)
N0QGQ

<Simple Log .2b>
This little utility is a handy way to create a logging file that you can later import into any data base for analysis, etc. It also shows you that just about anyone can use Think C and create something on the Mac! Let me know if you'd like the source code. WD1V @ WA1WOK.NH.USA.NA
Author is John Seney - WD1V, e-mail address is jseney@aol.com. For a copy of this program, mail a SASE disk mailer and 800K disk to: John D. Seney, WD1V, 144 Pepperidge Dr., Manchester, NH 03103
System 7

<Marathon>
Contesting/logging- Have seen references to (March 92 CQ magazine) and heard good things about MARATHON by N 0 IOS. I believe a demo was available for $8. Last address known is: Kevin Krueger, N0IOS, 1780 Ruth St., St.Paul, MN 551O9

*** Propagation, gray line, DX headings ***
<DX Map v1.1>
Displays a map of the world with the terminator. Gives location, prefixes, zone numbers, distance, and heading for any country you select. Freeware. Requires HyperCard 2.0.
Available via anonymous FTP from joker.optics.rochester.edu (in the /ham/dxmap directory). Or send a formatted 800K Macintosh disk with a stamped, self-addressed disk mailer to Len Saaf, NV2Z, 52 Raleigh Street, Rochester, NY 14620 (Internet: saaf@joker.optics.rochester.edu).

<SatTrak>
Primarily a satellite tracking program, but also calculates beam headings, Maidenhead grid locations, MUF plots, and band openings. Shareware.
Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K or 14.MB Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

<Sun Clock>
Desk accessory. Displays a color map of the world, including the terminator. Indicates current time for any location.
MLT Software, Inc., P.O. Box 368, Portland, OR 97207.

<DX Window>
Draws a great-circle world map centered on your QTH, with day/night terminator indicated. Displays over 400 DX locations with prefixes and beam headings.
Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.1>
Enter solar flux and get propagation predictions to desired areas of the world.
Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.5>
Provides sunlight status at both ends of a path; MUF, F0F2, and FOT frequencies; S/N ratio of the link; and other information.
Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<DX Helper v1.57B>
Displays beam heading, distance, gray line, and propagation information. Generates great-circle maps. Identifies prefixes, zones, and oblasts. Includes code practice.
MacTrak Software, P.O. Box 1590, Port Orchard, WA 98336.

<Mac MiniMUF v5.1>
A greyline and propagation predictor based on the PC version of MiniMUF by K4CFV. It is available directly from him for the price of a formatted disk and SASE (disk mailer).
His address in callbook or: Bob Stamper K4CFV, 12510 Shadowrun Blvd., Riverview, FL 33569

<Mac ShortWave v1.2>
A program called Mac Shortwave that figures MUF and LUF.
BXA Research in Plano, Texas

*** Satellite tracking ***
<SatTrack v1.02>
Tracks one satellite across a world map as it moves, displays the instantaneous position of several satellites, or generates tables of all satellites visible from a certain location at a given time. Also calculates beam headings, Maidenhead grid locations, and MUFs.
Shareware.
Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

<MacSat v3.1>
Tracks up to 21 satellites simultaneously, either in simulation or real-time mode. Text screen displays ground-track coordinates, range, mean anomaly, visibility (azimuth and elevation) and Doppler shift frequency information for all satellites being tracked. Graphical screen portrays the satellite ground tracks superimposed on a world map. Polar plot displays graphically the precise location of each visible satellite above the observer's horizon.
Developed by the Geodetic Research Laboratory of the University of New Brunswick.
Available from Richard B. Langley, R.R. 12, Fredericton, N.B. E3B 6H7, Canada (Internet: lang@unb.ca). A demo version of MacSat may be ftp'ed from directory PUB.CANSPACE on unbmvs1.csd.unb.ca.
System 7

<OrbiTrack>
<OrbiTrackFPU v2.1.4>
Calculates look angles to selected satellites, plots current satellite positions on a world map, and displays the visible passage of a satellite against background stars (either within the program itself or via a data file that can be read into the Voyager astronomy program). Please note that one version requires an FPU to operate!
BEK Developers, P.O. Box 47114, St. Petersburg, FL 33743. (Bill Bard, CompuServe:

75366,2557) (Note: This replaces BEK's previous MacSat program, which was not related to the program of the same name from UNB.)

<QuikMac>
Macintosh version of N4HY's QuikTrak program. Requires Microsoft BASIC. AMSAT, P.O. Box 27, Washington, DC 20044.

<Satellite Orbit Prediction Program>
Macintosh conversion of W3IWI program. Requires Microsoft BASIC.
Send formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Earl Skelton, N3ES, 6311 29th Place NW, Washington, DC 20015. Or send self-addressed stamped envelope for source listing.

<Satellite Pro>
Uses world maps and tables to indicate rising and setting schedules, current locations, mutual visibility opportunities, and footprints. Includes Mercator, polar, and great-circle displays. Optional antenna control.
MacTrak Software, P.O. Box 1590, Port Orchard, WA 98366.

<MacSPOC>
Author is on AOL and can be reached as adamod@aol.com via the internet.

*** Antenna design ***
<MacMiniNEC>
Chris Smolinski, N3JLY, 40 South Lake Way, Reisterstown, MD 21136.

*** Radio control ***
<ICOM Radio Control>
Provides a Macintosh interface for controlling ICOM transceivers that use the CI-V remote-control system. Lets you quickly change frequencies and modes. Also does logging and duping. Requires a CI-V to RS-422 converter (schematic included with program).
KE6FG Software, 9763 Pali Avenue, Tujunga, CA 91042.

<FreqValet>
Provides frequencies and DX program info for shortwave radio listeners. The program databases update automatically at 15, 30, or 60 minute intervals, thus providing a continuous display of broadcasts on-the-air at any given time in a spreadsheet like format. Features include sorting of data, scanning, and on-screen changing of databases. The program will convert Tom Sundstrom's dBase shorwave broadcast listing to FreqValet format and will do the same for Shorwave Navigator users. Separate cards are pro

vided for DX Programs, Ship to Shore, and Utility broadcasts. Computer control modules are available at extra cost for the Drake R8, Kenwood R-5000, JRC NRD-525, and NRD-535 receivers.
DX Computing, 232 Squaw Creek Road, Willow Park, TX 76087. Telephone (817) 441-9188 or (817) 441-5555 (fax).
Author is available via internet: dxcomp@aol.com
System 7 with HyperCard 2.1

*** Ham radio BBSs ***
<Digikron Systems BBS>
Various ham-related applications, including logging, propagation, Morse code, and packet. (408) 253-1309.

<MacScience BBS>
Various ham-related applications, including antenna design, propagation, WEFAX, packet, and Morse code. (408) 866-4933.

<N8EMR BBS>
Various ham-related files, including packet, DXing, and contesting software; AMSAT bulletins; and several ham newsletters. (614) 895-2553. Also available via FTP on AMPRnet at 44.70.0.1.

<WB3FFV BBS>
Various ham-related software, including packet, contesting, and Morse code applications. (410) 661-2475, 661-2598, and 661-2648.

<ChowdaNet BBS>
(more info at a later date)

*** Online Services carrying Ham Radio software ***
<America Online>
Supports Macintosh, PC's DOS & Windows versions, PS/1, Apple //s, Casio Zoomer. Ham Radio Club (keyword = ham radio) supports all computer types. Software for amateur radio, scanners, swl'ers and general electronics. For 10 FREE hours of trial time send your snail mail address to tstader@aol.com or call 1-800-827-6364 Ext. 6285. This site NOT ftb'able (yet). Internet e-mail.

<CompuServe>
Supports any communications software on most computers Ham Radio area (go hamnet) supports all types of communications formats. Call 1-800-848-8199 for information. This site NOT ftb'able. Internet e-mail.

<Delphi>
(more info at a later date) Internet e-mail

<GEnie>
(more info at a later date) Internet e-mail

<Prodigy>
Has ham radio message areas, no downloadable software. Limited internet e-mail.

==========
Misc. Internet FTP sites for Amateur Radio Macintosh software

joker.optics.rochester.edu (/ham)
sumex-aim.stanford.edu (/info-mac/app)
mac.archive.umich.edu various locations
uxc.cso.uiuc.edu (/pub/ham-radio)
ucsd.edu (/hamradio) many different subdirectories
(/hamradio/incoming) newest files temp holding area
(/hamradio/packet/tcpip/pa2aga) NET/Mac & IM/Mac area
ftp.apple.com (/pub/ham-radio)
akutaktak.andrew.cmu.edu (/aw0g) softkiss-mac
nic.switch.ch (/software/mac/ham-radio)
world.std.com (/pub/hamradio/mac)

If you know of any other sites, please e-mail me info so I may keep this list as up to date as possible!

- Terry

Thanks for all of the notes and updates! Keep them coming. Did I get all of the versions right?

==========
NOTE: Much of this work was done by Patty-N6BIS as she collected information from many vendors. I would like to keep this list as up to date as possible. Please feel free to drop me a note if you have any additional software to this list.

DISCLAIMER: The software listed is not endorsed by Apple Computer, Inc.(c) nor has it all been tested by the author/providers of this information.

The following is a list of informational files for this newsgroup
available via anonymous FTP from ftp.cs.buffalo.edu (currently at IP
number 128.205.32.9) or the Australian mirror at grivel.une.edu.au
(currently at IP number 129.180.4.7).

Questions to bowen@cs.buffalo.edu

1750m.band - misc info on the 1750m band
222xvtr.zip - PostScript code for KH6CP no-tune 222-MHz transverter
8085sys.zip - 8085 system software, from QEX 11/93 and 12/93
alinco_180t_mod - Alinco 180T modification for a TNC connection
ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
arrl-logo.ps - ARRL logo in PostScript format
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_digital_minutes - Minutes of the ARRL committee on digital comm.
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
arrl_info_service - announcement of the ARRLs trial information service
bbs_interface_specs - specifications for message passing protocol
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the marvin callsign server v1.3
canadian.Z - Canadian ham database in FCC format
carpet.loop.2 - Antenna for apartments and small spaces
clubcalls.Z - database of US ham clubs
comb6.zip - HF Propagation Predication program
docket_91-36 - information regarding the proposed scanner regs
dxcc-k2di - ARRL DXCC country list
dx_w2iol.dat - data for all country prefix, position, etc
dx_w2iol.doc - documentation for the above database
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_callsign - frequently asked questions about the callsign server
faq_ham_1 - frequently asked questions about ham radio (pts 1)
faq_ham_2 - frequently asked questions about ham radio (pts 2)
faq_ham_3 - frequently asked questions about ham radio (pts 3)
faq_packet - frequently asked questions about packet radio
faq_shortwave - frequently asked questions about shortwave
fft.com - EGA/VGA DOS command for spectral display (QST 1/92)
ffth.com - Hercules DOS command for spectral display (QST 1/92)
```

field_day_92 - field day rules for 1992
florida_antenna - Florida State antenna law info
guide2newsgroups - description of USENET newsgroups dedicated to radio
ham_sat_sum - summary of information needed to get on satellite
hams_on_usenet - list of ham operators and e-mail addresses on the net
hamstacks - information about the question pool stacks
handicap_waiver - info on obtaining a handicapped test waiver
hf_rigs - QST reviews of available HF rigs
ht_info - general information about commercial hand helds
icom_ic_w21at_mods - increases the number of bands on an Icom IC W21AT
intro_to_swl - info for aspiring short wave listeners
intro_to_scanners - info for aspiring scanner listeners
jlem.zip - Program, w/source, for 2kx8 ROM emulator (QEX 1/93)
j-poles - description of j-pole antenna made from twin-lead
lead_acid_batteries - essay on lead-acid batteries
license_plates - guide to ham calls on license plates
logos - PostScript logos for various ham organizations
mail_order - a database of electronic mail order shops
manufacturers - names and addresses of ham gear manufacturers
mav11.ps - postscript image of MAV-11 amplifier PCB (QEX 9/93)
mods - directory containing radio modifications
motorola_ge_service_man - how to get service manuals for Motorola and GE rigs
nasa_select - places where you can hear NASA SELECT broadcasts
new_packeteers - helpful essays for new packeteers
newcomers - tips and hints for those new to amateur radio
nprm_93_85_text - text of docket 93-85 (message forwarding systems)
packet_clubs - organizations you can get more packet info from
packet_gateways - list of gateways from packet to Internet
packet_header_standard - description of BBS message header standards
packet_misc - miscellaneous packet info
packet_software - list of packet software versions
phone_bbs_list - phone BBSs for ham related issues/software
pio_handbook - ARRL Public Information Officer's Handbook
pr_docket_92-136 - text of FCC PR Docket 92-136
qex1193.ps - Postscript image of 13cm preamp board, 11/93 QEX "RF"
qsl_bureau1 - information about the ARRL QSL bureau
qsl_bureau2 - "what should I do if" list for the QSL bureau
qst_prodrev - index of ARRL product reviews in QST
quest_pool_novice - novice question pool - good after 7/1/93
quest_pool_technician - technician question pool - good after 7/1/93
quest_pool_general - general question pool - good before 6/30/94
quest_pool_advanced - advanced question pool - good before 6/30/95
quest_pool_extra - extra question pool - good before 6/30/96
repeater_map_proj - description of Electronic Repeater Mapping Project
rfi_tips - good posting about RFI
sol_geo_data - desciption of daily solar geophysical broadcasts
sol_terra_terms - glossary of solar-terrestrial terms
sstv_wefax_info - general help for SSTV and WEFAX users
tasm.zip - table-driven assembler for weavrdsp.zip file
usenet_purchases - tips on buying and selling via USENET

weavrdsp.zip - src to "Weaver Method Modulator Using DSP" (QEX 9/93)

For readers of this newsgroup both new and experienced, these files are
a de-facto "Required Reading List" to provide definitive answers and
pointers to other sources for questions that come up in this forum.

This is also your archive, so any additional articles, guides, or small
PostScript graphics that you feel would enhance this collection are most
welcome. Submit to Devon via his E-mail address above.

Thanks go to Devon Bowen, KA2NRC, for providing diskspace and maintaining
these valuable archives, as well as all the authors who wrote and submitted
the information contained in them.

Additional archives out there that have /pub/ham-radio directories are
encouraged to "mirror" these files to provide redundant storage for these
documents. Some of these sites (which may or may not mirror

Questions about FTP mirroring and access to appropriate software should be directed to me, or do an Archie search on the keyword "mirror."

For those without FTP access (and only those without FTP access, please), there is an FTP mail server at ftpmail@decwrl.dec.com (IP 16.1.0.1). Send the word "HELP" to this address for more information.

Additional documents on Usenet and other newsgroups may be obtained from rtfm.mit.edu (IP 18.70.0.209) via anonymous FTP or via mail server (send the word "HELP" to mail-server@rtfm.mit.edu).

The American Radio Relay League has recently made available a mail-server to distribute many of their informational documents in electronic form. Send E-mail to info@arrl.org with "HELP" in the message body for more information.

Yet another mail-server has been made available by Steve Harding, KA6ETB. Send E-mail to ham-server@grafex.Cupertino.CA.US with "HELP" in the message body for more information.

SB DX @ ALLBBS $OPDX.135
Ohio/Penn DX Bulletin No. 135

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 135
BID: $OPDX.135
November 15, 1993
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, VE1WH, AD1C, KN2M, NA2M, WB2DND, WB2YQH, W2JDK, K4CEF & Southeastern Cluster Group, WU1F, WA4JQS, WA8MEM, WD8IOU, AA9GR, N9LJX, N9MWB, K0IR, OH2BTB and 9V1YC for the following DX information.

3Y0PI, PETER I ISLAND (Two Reports). Firstly, Ralph, K0IR, who is the team leader for the DXpedition, called to inform OPDX that the comments reported (by Luis, XE1L) in bulletin OPDX.134 were not correct. Ralph stated the team has no plans or policies not to allow any portable designator or to delete stations for working the the DXpedition 3 times on same band/mode. He also mentioned an official update will be forth-coming soon.
The second report comes from Tony, WA4JQS, who says he has just finished crating all the equipment. Bob, N4GCK, will arrive Sunday (Nov. 14) to load the crated equipment and truck it to Florida to meet an air cargo plane that will fly it to Uruguay. Once the equipment arrives in Uruguay, it will be loaded aboard the icebreaker that will take the group to Peter I. This cargo will be put aboard with the other 6000 pounds already shipped and loaded by ON6TT last month in Germany. In mid-January, the entire team will fly to Port Stanley in the Falkland Islands to board the icebreaker. Permission has now been secured to operate /MM while enroute to the island. All the satellite equipment has been received and crated, and the group hopes to operate as the first-ever satellite operation from Peter I. Due to the time and point in this sunspot cycle, conditions on the higher bands are not expected to be as good as in past years, but should be excellent on the lower bands. They should be able to communicate with some part of the world 24 hours a day and they plan to follow the same basic procedures and modes of operation that worked well on the South Sandwich expedition. Also, Tony sends along his thanks to all who have supported this effort so far. The group has spent a lot of time and money assuring the success of this venture. Funding is still needed and can be sent to AA6BB/7.

5A, LIBYA. There was a report from PA-land that a 5A0A was active on 7000.5 kHz, Friday afternoon (stateside). This station was only working Europe. There is no other information about this station. WFWL.

9V, SINGAPORE. James, 9V1YC, states he is on 7005-7007 at 1045-1115z every day looking for North and South Americans, but with very few takers. 9V1ZE has also been reported several times lately on this same frequency with a nice signal, the latest was November 12th on 7005 kHz around 1218z.

A25, BOTSWANA. Arno, OH7XM, will be active until December 5th, as A25/OH7XM. He will also be active during the CQ WW CW Contest as a 40 meter single category, but he will be using Dave's A22MN callsign. QSL via OH7XM, Maamonlahdentie 1 B 9, 00200 Helsinki, Finland.

A6, UNITED ARAB EMIRATES. On August 3, 1993, A61AF, a new club station was licensed to operate. The members operate from the Dubai Men's College of Higher Technology. The members are reported to be quite an enthusiastic group and have purchased fine equipment for HF, VHF and satellite operations. They were heard last making a few contacts in the CQ WW SSB Contest. QSL to: Dubai Mens College, P.O. Box 15825, Dubai, U.A.E.

C2, NAURU. Ron, ZL1AMO, is island popping again. This time he is signing C21/ZL1AMO and is active at various times, mostly CW on the lower bands and the WARC bands. His length of stay is unknown at this time.

C5, GAMBIA. Gary, C53HG, states he is active on 75 meters once or twice a week. He hangs around 3795 kHz at 0500z (He has been heard as late as 0700z). If you can not work him there, listen for him on 15 meters between 1800-1900z and on 20 meters between 2000-0100z.

C9, MOZAMBIQUE. Todd, N9MWB, reports working C91AJ on AO-13 at about 0255z, November 12th. QSL via CT4RM.

EA6, BALEARIC ISLANDS. Tom, N6RA, will be active from here a few days before and after the CQ WW CW Contest as EA6/N6RA. But during the contest, Tom will be signing ED6XXX as a Single Op/All Band entry. QSL via N6RA.

FS, FRENCH ST. MARTIN. Be looking for FS/W2QM from French St. Martin. The North Jersey DX Association will be active from December 1 through December 8. They will operate all bands, 160-10 meters, SSB and CW. Operators will be W2AGW, W2MJ, W2QM, W2JB, W2FZY, K2AIO, K2GHV, and WA2VUN. QSL to W2QM.

N9NS/KH5K CARDS. Mike, N9NS, is happy to report that all N9NS/KH5K QSLs that were received have been answered (this includes bureau cards, SWLs, etc). He has answered over 14000 QSLs in ten weeks since the cards arrived from the printer. Mike mentions it was unfortunate that many unexpected delays in designing the card caused a late start on QSLing and he wants to thank all those who waited patiently.

OD5ZZ AND OD5RAK CARDS. Dwaine, WA8MEM, states he received a new batch of cards from Walid, OD5ZZ, for QSL processing. The first batch of cards went into the mail November 8th, and Dwaine hopes to have all the cards

processed by December 1st. PLEASE do not re-submit cards.

TY, BENIN. TY1PS was heard calling CQ on RTTY, 14083 kHz around 2300z, with very few takers. He was also heard on 21085 kHz around 1850z.

VE9, NEW BRUNSWICK. Jim, VE1WH, informed OPDX that as of December 1, 1993, New Brunswick amateurs will be able to sign VE9***, and any new call issued will automatically have the VE9 prefix.

VP9, BERMUDA. (GEE! THIS ISLAND WILL BE CROWDED WITH CONTESTERS!)
Members of the Western New York DX Association (WNYDXA) will be active from Paget Parish, from November 23-30. They will have 2 stations active on CW, SSB and RTTY. Look for the following callsigns using /VP9: WB2YQH, WB2ABD, WA2AOG, WA2RAJ, VE3YBH(ex-G3YBH), W2KKZ, KF2QE(ex-KB2MRM), KB2NMV and WF2S. QSL all callsigns to their HOME CALL. This group will also be active as VP9MZ, as a Multi-Single entry during the CQ WW CW Contest. They will be active on all bands (160-10 meters). QSL via WB2YQH for a special contest QSL.
Another group from the WNYDXA, with selected operators from the KN2M contest crew, will be active in the CQ WW CW Contest as VP9MX in the Multi/Single category. QSL via W2RR.
Operators N3RD, N3AD and KI3V will be active as VP9AD in the contest as Multi/Single category. This group will have at least 3 towers with monobanders, 105BA, 155BA, 204BA and a 402BA for 40 meters. For 80 meters they will use a Delta Loop and Inverted Vee. For 160 meter a Inverted Vee will be used. Beverages will be used to the NE and NW. Before and after the contest (Nov. 22 to Dec. 1), Rick, KI3V, will sign KI3V/VP9. He will be operating 80 and 160 meters CW/SSB looking for West Coast when the propagtion permits.

XU, KAMPUCHEA. Sanyi, XU7VK, was heard this week on 7065 kHz around 1230z, SSB, working YBs and DUs. He was heard saying that he is runnning a KW into a wire antenna and would be on 40 meters a lot in future. QSL via HA0HW.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Changes: new mailing lists, .packet rmgroup, and .policy updates

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 18 September
1993 to add the mailing lists for the new rec.radio.amateur newsgroups, to
note the rmgroup of rec.radio.amateur.packet, and to officially retire some
(in)famous threads of discussion on rec.radio.amateur.policy.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
arrangement, but one was that the system was not supposed to be used for
commercial purposes. Since one of hams' favorite pastimes is swapping
gear, it was natural for hams to post messages about equipment for sale
to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use
restriction, and after some argument, a group was created specifically
```

for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize

this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, should be removed by September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas,

commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
===========================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Last Saturday Nov 13 10 yr old Laura Sobon who passed Advanced class
and 20WPM CW when she was 9 passed the Extra written exam.

She will be getting a new call.

Her proud father Paul NO0T says now when he needs to know something
he asks her.

Unfortunately, a lot of the information new hams need to understand just what all those knobs are doing on the front of those old transceivers is just not around any more in any of the handbooks or introductory literature. When I was "tooling up" for my general class license, I remember studying "Understanding Amateur Radio" from the ARRL. A real fine text that helped me understand just what what going on inside the box. I'm not sure anything like that is available any more. All the new entrants can do is rely on the Elmers to help 'em out.

I wonder what ever happened to my copy of that book?

>store), and then get the catalog FREE with the coupon. That's the
>intent. They're just trying to save a few bucks by not giving out the
>catalog to people who don't buy ANYTHING.

I picked up my catalog yesterday -- while there to buy something I saw on sale (never pay list at the 'Shack -- it almost always ends up on sale if you are patient!) and used the coupon, too. Also got the 'free' flashlite (yeah, they nicked me for the batteries -- but quantity discount of 10% applied, since there were five cells!) and a part for a project I am working on. They didn't charge me for the catalog.

>Now, I guess, for those hams out there who just like to have the shack
>catalog to compare against or to say "yeah, there's a neat little
>toy," you now have to BUY SOMETHING to get it. If you're not
>interested in "shopping" at R/S, then why do you need the catalog?
>-- Steve , KD4YLB ... - . ...- .

Agree with you, Steve. But those who complain about the charge for the catalog are the same types that look offended when you offer a resonable price for something they are hoping to sell at a major killing at the next hamfest! It takes all kinds...

From: dearnshaw@worldbank.org
Message-ID: <1993Nov15.144611.23215@worldbank.org>
Source record: 274257

We have a NIR-10 at work's club station, and I'm not overly impressed! I personally wouldn't pay the $300+ for this unit. The NIR-10 is okay for CW and badnpass applications, but the "white noise" reduction leaves a lot to be desired.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Greetings!

I've inherited my dad's Icom 230 (bought in 1974), and would like to continue using it. The radio appears to receive just fine, and the crystal-controlled tuner has to be TLC'd, but the output section has died. I've already run the radio through a cost estimate with Icom, and they said $200-300. To be honest, I'm hoping to come in a little under that (as I can buy a 229H new for around $325 or so).

A friend at work here believe the power amplifier module (PA U-49 on the schematic) is most likely at fault. I'm looking for such a beast, and would like to put out a general call for this and other spare parts. Does anyone have any leads?

Any help will be much appreciated!

Well, unless you upgrade to General at the same time you take your code test,
you may be in for a pleasant surprise; the CW subbands tend to be more
civilized than the phone bands. At least when I was a Novice, there were
elmers who made a point of engaging Novices in conversations (admittedly,
this was some time ago).

>I also wonder what all of these knobs on my HF rig (Kenwood TS-820) do.

Gee, I'm afraid I wouldn't know. That's one advantage to building all one's
equipment; you always know what the knobs do :-).

: Old hams helping new hams, Yea right. First of all, most of you

You're quite right, around the world (I'm in Scotland) 2metres is largely a group of cliques which hardly ever talk to someone in a different clique, certainly never to strangers.

This will give any newcomer a bad feeling of being snubbed. As you've listened to their conversations, I cannot, for the life in me, understand why you would want to converse with them.

"W11WWW Monitoring" is a clique - call. some member of his clique will respond to him. You, as a non-clique member will get no response to such a call because there is no-one in your clique (Those who do it are actually in transmit when they say they're monitoring :-) No clique member will EVER call CQ on 2m or on any repeater because it risks ANYONE replying. There are terrible penalties for any clique member calling CQ or talking to strangers that make the Wouff Hongg seem tame.

There are a few people worth meeting on the air, but it takes some effort to find them in some areas. It is worth the effort, though.

:
: I also wonder what all of these knobs on my HF rig (Kenwood TS-820) do.

: hams I hear on HF? Does the fact that I can't guess the answer because
: of poor manuals make me a bad person or am I just stupid?

NOW here I can help....

Your output valves have about an 800v power supply. The anodes are fed via an inductor (RF choke) so 800v is their average DC level. Any signal voltage will be an AC voltage superimposed on this. The anodes cannot go very close to ground potential (you don't want to go too far below the screen grid voltage of 250v or so, or else the screen starts to draw increased current and can overheat) This means the anodes can do about a 500v swing down to 300v above ground. During the other half of the cycle, they will swing 500v above their power supply to 1300v above ground. Got the picture ? OK. We have a 1000 volt peak-peak AC signal. How much power this relates to is undefined. It depends what resistive load impedance it is applied to. 1000v p-p is about 350v RMS. To take 100watts from this we use 100=V^2/R and get a load resistor of about 1200 ohms. At RF this is a very high impedance. To design a transformer to transform a 50 ohm load or antenna to 1200 ohms, AND withstand a

kilovolt is a tall order. Some filtering is also needed.

Way back in the mists of time, someone decided to do the
transformation with a tapped resonant circuit and do both jobs with one
circuit. A simple loop of 2 caps and one inductor. The high voltage
input is applied across the smaller capacitor, the low impedance low
voltage load is applied across the larger capacitor. OK so far?
The junction of the two capacitors is chosen as the ground point as it
makes life easier. A blocking capacitor is used in the feed from the
anodes to block the DC component (800v)
This is the classic Pi Tank.

If you want less power, set the output capacitance larger (labelled
LIGHTER loading on your panel just to create confusion!) and set the
input capacitance a little lower until you get resonance again. You have
changed the tappings of your resonator so your antenna presents a higher
impedance to the anodes and so takes lass current and power. Easy !

Because the input cap (Labelled "PLATE") is much smaller, it has a
greater influence on the tuned frequency than the large output cap
(Labelled "Loading") to understand this, just think of the formula for
2 caps in series.....

Light loading is GOOD, your tubes run less current, last longer run
cooler, your pi tank is running with a higher Q, which makes it sharper
(and more difficult) to tune, but gives much more attenuation of
harmonics.

Your Pi tank can be adjusted to avccomodate non-50 ohm loads, rather
like a reduced range ATU (It has as much range as many built-in auto
ATUs.

>terms of cost and scale) as the spark generator was as high as a man, and
>the frequency was determined by the shaft RPM.

At the Lawrence Hall of Science in Berkeley they have the electromagnet Dr. Lawrence used to construct the first cyclotron sitting out front; it's about 9 feet tall, and was part of a commercial spark transmitter made surplus by the advent of tube transmitters. (BTW, Lawrence was a ham, and they have his spark rig on display inside.)

My question is, why did spark transmitters need big electromagnets? Were they basically big generators, generating EMF by rotating a coil through the magnetic field?

(Another fun thing on exhibit at the LHoS was Lawrence's letter to Henri Bequerel mentioning that he'd heard of some big French spark transmitting station closing down, and suggesting that HB ask them for their surplus magnets so he could build his own cyclotron...)

I don't want to bore everyone by taking my turn at Gary-bashing, but I can't resist. I am brand new to amateur radio. So new, in fact, that I just passed elements 1A, 2, and 3A on Nov 6 (did I say that right, Gary? Forgive me if I'm not as smart as you.) So there have been many times I've wanted to say exactly what Doug said:
What do I do now? or
Any help?

BTW, I'm 30 yrs old and have a BS and an MS in mechanical engineering, so I don't feel like I'm an idiot. But amateur radio is a very diverse hobby and can be as technically challenging as your interests and capabilites will allow. I've easily got a hundred questions to ask someone. And each answer is food for thought and spawns 2 more questions. For the inexperienced amateur, there is no such thing as a stupid question, yet Gary (or people like him) can certainly give a different impression. I wanted to become a ham more than twenty years ago, but I didn't know a single person to turn to for help. At the time, I had no idea there were Elmers out there to help (or even what one was, for that matter). But I can assure you of one thing, if the first ham I ran into was a Gary, I wouldn't be waiting for ticket now.

Hope to work you soon... 10-12 weeks, they tell me :-(

In <CGJK9p.oq@hpqmoea.sqf.hp.com> dstock@hpqmoca.sqf.hp.com (David Stockton) writes:

> There is a list of "Elmers" on usenet. try rec.radio.amateur.info

Thanks David! I've begun to think I've been forgotten! :-)

At about the same time as the FAQ lists for this newsgroup were being created (almost 3 years ago), there was interest expressed in setting up an indexed list of net experts (or "Elmers") who were willing to field questions offline on various subjects. This was considered preferable to having some poor newcomer ask a question of the group at large, get a nasty response, then have a counter-flame-war kick off to the detriment of everyone. I volunteered to take on this project.

This is not to say that there isn't a place for ongoing technical discussion on the newsgroup (Gary Coffman is *usually* a constructive contributor to the newsgroups in this regard), just that the Elmers list is offered as an alternative to keep the load down (and to help sometimes shy new hams feel welcome to these computer forums). Dave Stockton is one such Elmer, and as you can see, has offered some very helpful advice on the subject.

The list currently encompasses almost 100 Elmers, of almost every conceivable area of expertise. It is simultaneously cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month. If you'd like to volunteer to be an Elmer, or want more information on how to obtain a copy of the list itself, send E-mail to elmers-request@unomaha.edu (a reply to this news article should work).

I know that the 950SDX has real dual receive capability. You can hear one receiver in each ear with stereo earphones. The 950S hears them both on the same audio channel. The AUX receiver only has an audio filter available.

The Yaesu FT1000 has dual receive also. With the FT1000 there is an optional 500HZ filter for the AUX receiver.

I bought the FT1000.

Good afternnon rram, and pardon me if the distribution header is ignored.

Can someone provide me with a listing of 2m repeater output outputs for the NYC Metro area?

Also, has anyone heard a final count on the number of logs Fred Doob AA8FQ received during the NYC Marathon?
Fred Doob, for those who didn't hear, ran yesterday with an HT and a promise from Icom America to donate
$5 to the Sloan Kettering Memorial Pediatric Cancer Research fund. I was listening on the freqs published in
MT and was floored by the number of QSOs he had. I think he had 60 by the first mile! Did anyone else monitor
as well?

Thanks in Advance,
Steve

4350. RS FREQ COUNTER HOLD MOD!!!!!!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-15 19:15:32 UTC
From: galen@picea.CFNR.ColoState.EDU
Message-ID: <Nov15.191532.82222@yuma.ACNS.ColoState.EDU>
Source record: 274267
Cross-posted to:
sci.electronics,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

How to add a hold function to the Radio Shack RF Frequency Counter:

Ground TP 17. In the schematic, TP17 is pin one of U3, connected to +5V thru a 47k resistor. On the circuit board, TP17 is on the display side, just right of the lower-right corner of the IC. Grounds are about 1/4 inch below and to the right, the three non-tinned points in the large area of metal. TP17 is the tinned pad next to a SM resistor marked '473' for 47k.

I rigged a momentary switch to ground TP17 thru a 1k resistor (you never can tell) and it works just fine! I drilled a small hole to mount the switch just above the plastic depression so I could push the button with my right thumb. A small toggle switch would fit.

I'll be trying the other TP's to see what wonderful things RS didn't put on the front.

I agree with some of the comments about repeaters. I have not enjoyed using repeaters that much - there do seem to be many cliques - the same callsigns are heard all the time and if you're not a member of a club it can be difficult to talk much. On the other hand I have had two really enjoyable QSOs on 2m simplex recently. Even in the (SF) Bay Area where there are probably more 2m rigs than cell phones, there doesn't seem to be much simplex traffic. I have a Yaesu FT-530 and have programmed all of the North CA simplex frequencies into it and then use it's scanning to find an active frequency. I then wait until the QSO is over and call one of the parties - I have done this a couple of times recently and had some very enjoyable QSOs. The other hams were surprised that I was on simplex - and in both cases they didn't like using repeaters that much. I think it would be fun sometime to take a J-pole and my HT to a high point around here and see just how far I can get simplex.

So my point is that I have found that using simplex cuts out a lot of the people that I might not want to talk with - it's a form of self-selection on their part.

Jeff, I tried one of these current baluns from Radio Works - they call it the Remote Balun
- and it got quite hot from my 100 watts (the balun is rated 1.5 KW). The idea was to
replace the puny voltage balun in my MFJ-948 tuner, as it
couldn't handle severe mismatches. The result was a steadily climbing SWR. The
Radio Works balun did no better. The solution? I replaced the MFJ balun with
one I made myself with two glued-together Amidon ferrite cores: FT-140-61, and wound #18
thermaleze wire in the same configuration as that on the MFJ core.

>just what what going on inside the box. I'm not sure anything like that is
>available any more. All the new entrants can do is rely on the Elmers to help
>'em out.

and along with that should be "A Course in Radio Fundamentals".

I have a bad photocopy here made to reduce wear on a worn copy - copyright
1972. Even looking at the book today, it appears that it would serve nicely.
However, we got a light weight "Understanding Basic Electronics" today
(not that it isn't needed but there's a place for the serious technical
book on general electronics).

was only $2 in 1972. probably could use some updating for new stuff. I'd
probably buy a copy if it isn't filled with lots of fluffy sidebars and cutesy
cartoons and art (a distraction in UBE in my opinion).

i would also think a return to book sized books instead of the 8x11 floppy
books might help some...the big books are a bit too floppy.

Well, the last pair of messages on the unstoppable STS-58 flight messages forced me to laugh aloud. Not so much their content, but the fact that we seem to have built a structure here (Internet/ mail-lists/Packet/Gateways) that has taken on a life of its own.

First of all, let's not take this TOO seriously. Yes, it is a problem, but I am "forced" to waste about 1 minute of time each day, looking at the subject lines and deleting those messages right away.

Secondly, it seems to me that some sort of original message ID should be available that could be archived at a mail list site. This list of previously-posted messages could be used to prevent multiple broadcasts (e.g., the STS-58 Keps 10/28) without restricting posting access to a few individuals. If we are going to modify the software, why not in this way rather than locking up the gate?

All in all, this sort of behavior is VERY instructive and should be discussed in the meeting forums of the Packet BBS, list-server and Gateway folks. Let's not waste the opportunity to make the overall system better in the future through analysis of what has happened (and is happening!) here.

Absolutely...according to the local RS employees, the national system
polls the local stores, takes what it wants, and leaves the rest of
the database alone (it does not update local databases). I suppose if
you went to every RS you came across, bought a .39 capacitor and gave
a different "four digits" with a slightly different name and address,
you could get 'n' monthly special circulars every month!

As someone who is studying for Tech No-Code (with my 11 year old son), this
is great to know. Trouble is Paul, newcomers to ham are probably newcomers
to this news group. I've been reading this group for almost a month and
this is the first I've seen on "Elmers" in general or the list in
particular. Of course, the volume of traffic on this group can make it
hard to peruse much less digest everything.

>The list currently encompasses almost 100 Elmers, of almost every
>conceivable area of expertise. It is simultaneously cross-posted to

Hi,

I need some help from netters. I have a friend coming from out of
town. He'd like to visit some good shops for amateur radio. I have no
idea where to go in Los Angeles Area.

So, any recommendation for good Equipment shop in LA county area ?

I think my friend is looking for some VHF, UHF equipment and may be
packet radio stuff too.

Please reply by e-mail since I don't usually read this group.

Thank you

Text item: Text_1

In the Nov QST, page 79, some specs are given for the TRFT-550 Backpacker II transceiver. The blocking dynamic range is 100 db and the two-tone intermod distortion dynamic range is 81 db. Is this enough information to answer the following question?

If one were trying to do some state-of-the-art Digital Signal Processing on the audio from this direct-conversion receiver, how many bits of A/D would one need?

Thanks and 73, Cecil, kg7bk@indirect.com (I do not speak for Intel)

Shame on you, Gary! Did you know what absolutely every button on your radio did when YOU first got on the air? Did you automatically know the exact right thing to do when you first set hand to key or first picked up a microphone? I suspect that, if you did, it meant you had a great Elmer, not that your licensing exams taught you every last step to follow. Well, not everybody is privileged enough to have a great Elmer. Some folks don't even have mediocre Elmers!

Doug, may I ask a small question? Have you asked any local hams for help, or maybe contacted one of the members of the VE team that examined you? I don't know if you've got anyone in your immediate area who could help, but that would be where I would go first. It's probably easier for someone to show you how to do this stuff than it would be for someone out here on the net to explain it. I'd help you myself, but I've never seen an HW-101, and wouldn't have a clue where to begin...

Good luck! and 73 de Faith N1JIT

The best one for the money IMHO is the Timewave DSP-9. For $169.95
it does everything the NIR-10 ($349.95) does. It uses a row of
pushbuttons to select combinations of modes. It has just the
right combinations of bells and whistles for both cw and ssb
operation: Noise reduction, mulitple tone removal (auto-notches),
high pass filters, and cw narrow bandpass filters 100/200/500 Hz.

I've owned the DSP-9, NIR-10, NIR-7, and W9GR filters. Still have
the DSP9 and DSP59.

For everyone's information, I've taken Tom Clark's previous message and
forwarded it to the Gateways mail list to inform all the sysops of what is
going on here.

Oh, BTW, And why _should_ I even be allowed to post on here? I haven't
generated any keplarian elements lately except for that of those darn modern
physics problems that are orbiting around in my head.

Sorry to be causing all the trouble, but it definatly needs to be
corrected before it happens again. I do not yet understand exactly what is
happening, but I'm willing to try to figure it out.

>with folks back here in NJ. What band would you recommend to accomplish
>this, and is it possible on the freqs allowed with a tech-no code
>license?

Alas, your best bands for maintaining mobile communications back to NJ are at HF. 75 meters, 40 meters, or 20 meters, depending on the time of day, your progress along your route, and conditions, are the bands of choice. Those all currently require a General or higher class license for voice operation. A Novice or Tech plus Code license would give you Morse priviledges in parts of the 80 and 40 meter bands, but mobile Morse is a challenging operational mode, and a good way to have a wreck if you aren't extremely experienced. Portable operations are feasible however. As a Tech plus Code, you'd have phone priviledges on 10 meters, but it's unlikely that conditions would favor your desired propagation path on 10 during your trip.

As a Tech, 6 meters is your only band that could span 1000+ miles, and only then under conditions of an active ionosphere which is unlikely due to declining solar activity. Under very rare ducting conditions, 2 meters might do, but we're now talking conditions that only occur for a few hours once every few years. That's not what you want for your trip.

However, there is another way. It's the amateur satellites. Using the Microsats mobile is possible, and would allow non-realtime packet messages to be exchanged with anyone in the world. There are also the high orbit birds, Oscar 10 and 13. AO10 has become something of a challenge as it has aged, but AO 13 would give you the range you need for voice communications. Mobile operation would be difficult on these birds because you need beam antennas, but portable operation is very feasible. I carry a tripod and a couple of small beams with me on trips so I can setup a satellite station at rest stops along the way. Note that you need multimode radios for 2 meters and 70 cm to take advantage of these birds.

The East and Midwest don't have the vast systems of linked repeaters
that are found in the West, so a handheld or mobile VHF/UHF FM rig
won't be useful for maintaining communications back to NJ. Still,
you'll find lots of hams to talk to along your journey on VHF/UHF.
It'll definitely make the trip more pleasant. A final note, handhelds
are not ideal tools for mobile communications. A real mobile rig installed
in the car will be much better. The low power, and the susceptability
of HTs to intermod when operated on external antennas, makes them the
choice of last resort for mobile operation. You'll be happier, and those
who have to listen to you will definitely be happier, if you don't use
a HT as your main station.

Actually, for those who've been hammering on Gary, I'd advise that
you take another look at his comment in light of the plethora of advice
and wit he makes available on the net (yes, I'm serious, folks). I've
posted many questions to the net, and in most cases, somewhere along the
line I end up with an explanation from Gary which usually ends up among
the clearest and most concise explanations I come across...including this
particular question, which he responded to on the info-hams newslist where
some kind soul cross-posted it for me...and which he later reposted to this
group.

>Old hams helping new hams, Yea right. First of all, most of you
>old hams don't even bother to respond to a call you don't know.
>Do you have any idea how frustrating it is to call KB7YOU monitoring,

>of times on repeaters and U/Vhf simplex, I decided to jump into HF.
>

Ever tried joining a net? My first rig was a 2-meter handheld. The day
I got my license, I ran inside and grabbed it, and called, "N0YVW listening."
Nada. I was at it most of the day, and getting depressed. I went for a drive
that night to get into some other repeater areas. Same thing. I was getting
ready to come home, when on the repeater I happened to be monitoring, I heard,
"QST all Linn County Hams for the CVARC Monday Night Net. This net meets
every Monday Night at 8:30 on the CVARC 146.745/145 repeater. Net Control this
evening is WB0ULO, Russ..." When it came time to log in to the net, I managed
to squeak, "N0YWV...err, make that N0YVW, Doug, from Iowa City." And he
came back to me! "Net recognizes N0YVW, Doug from Iowa City. That sounds
like a pretty new call." He noticed!
"Ticket just came in the mail today."
"Well, then, welcome to Amateur Radio, Doug! I hope you enjoy it as
much as I do!"
That was a great welcome, as far as I'm concerned. Made up to me for
what I got locally.

Care to know some of my secrets for getting people to come back
to me? Listen to them talk about their interests, what they do, whether
they work on the repeater or are always putting up antennas. Then, when you
have a question about their area of interest, give them a call! For example,
One local ham, KA0CNN, is an avid DXer, always going to antenna parties, and
is involved with maintaining the local repeater. One day, I was soldering
some coax connectors and just couldn't quite get it right. I heard him
call, "KA0CNN mobile monitoring." So I came back with, "KA0CNN KA0CNN, this
is N0YVW, do you have time to answer a quick question?" Yes, he did, he told
me where to find the info I needed, and even offered to drop by a photocopy
of it. I've done the same with other things--posted requests for info to the
sunday and monday night nets and gotten answers back, come back with answers
myself, etc. I've gotten good results. I'm still not on the "in" crowd,
but people recognize my call and come back to me some, I come back to them
and don't feel squeamish about it.

>I've got my code down and I'm looking forward to the test not so
>I can talk to any of you but simply to prove that a young, stupid,
>Nintendo playing no code can enter your glorified world of HF. If
>anything HF is worse. You flip on your kilowatt powered xcivers,
>and blow apart the airwaves do discuss the state of your bowels with
>a friend two states away. You can't even here me over your self
>generated noise. Not that you would respond if you could.
>

You've obviously got a lot of hostility toward the OT's. I'm trying to pass my general, too (I'm Tech/Hf now), and hope to upgrade this Saturday. But not to prove anything to anybody other than myself, and if I don't manage to pass the code, that's cool, too. There's always next month (and at the rate those last few WPM are coming, it might *be* next month. *grin*). But if you want to talk about frustrations, drop me some e-mail. We can swap stories.

>Gary, would you care to explain to me what is wrong with Dougs request
>for help???
>

The only thing I read into what he wrote about what's wrong with my request was an indictment of the system that makes you memorize all this kipple that can be looked up on a table for the exams (coax cable types, etc) rather than requiring you to learn *useful* things, such as operating procedure. Correct me if I'm wrong, Gary. Anyway, that can be read multiple ways, too--such as, "Look at what we've got when we have people willing to admit their ignorance so they can learn more!" :-)

>PS: Doug, If you are still out there and have not figured these
>things out. Email me and I'll share with you the stuff I've
>learned so far. I think I can answer most of your questions.
>

Thanx, I'd enjoy corresponding with you (truly).

>PPS: Welcome to the hobby, such as it is.
>

Thank you again! :-)

73, Doug

PS, care to know my experience? "ELMERS AREN'T DEAD, THEY'VE JUST ALL MOVED TO THE INTERNET!" I've come across so many people willing to give me advice: Gary Coffman, klauder@pica.army.mil, Jim Kerman (KR1S, the guy who writes for QST), and so many others in places ranging from Canada to Finland (yes! I got the CERT info in the mail, but can't find your e-mail address! Tnx.). Good places to check out: here, qrp@think.com (an excellent place!), info-hams@ucsd.edu, boatanchors@gnu.ai.mit.edu (I think), just to name a few.

Peace, es 73 -- Keep looking! bad experience locally doesn't mean bad all over.

>studying for the exams.

I've heard wildly divergent tales of late...turnaround times for initial licenses ranging from 30 to 90 days. I'm wondering if there's a big difference in turnaround times, depending on which VEC is handling the front end of the paperwork?

Anyone know?

4378. Re: DSP units

dearnshaw@worldbank.org (Darrell Earnshaw) writes:

>We have a NIR-10 at work's club station, and I'm not overly impressed! I
>personally wouldn't pay the $300+ for this unit. The NIR-10 is okay for CW and
>badnpass applications, but the "white noise" reduction leaves a lot to be
>desired.

>-- Darrell

I ran the NIR-10 right along side the DSP-9 from Timewave, through an
A/B switch, and couldn't believe they get double the money for the
NIR-10. For my operating, the DSP-9 outperformed the NIR-10 most of
the time. Only on rare occasion could I see an advantage to the
NIR-10. I compared them for just over a month of daily operation.

For what it's worth...

I think the answer is simple and you probably know it already - for 100db
ie 10b its 10 x log(10 to base 2).

4380. Finally passed my tests after 5 years!

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-16 04:10:33 UTC
From: al255@yfn.ysu.edu
Message-ID: <2c9jrp$idp@news.ysu.edu>
Source record: 274157

Have no idea why I am posting this but here it is.

5 years ago I got interested in ham radio since I got wind of a ham radio class being offered close by. It sounded cool and it was. So I studided the code and the material for the novice and tech written tests. I thought I knew the code ok and the instructor of the course N0JGB(at least that's what he was known as then) taught the others well enough. But around test time I passed both written tests with 90%+ scores and totally died a most gruesome and disgusting death on the code test despite studying it for months. But there was another test session later on that year so I studied the code some more took both writtens over(since a certain instructor LOST the copies of my earlier writtens) and again passed with 90%+ on both and did marginally better on the code test, but still died on it.
I kept studying on and off but eventually gave up the code since I am horrible atit. Of course about say 4-5 months later(i think) after my test completion certificate was void they passed the thing for no-code tech. But the real doing of it took a while longer for it to happen.
By the time I found the new test book for no-code tech I was relocated to a new area and had no idea where the ham radio people were. Tried the 2 meter band to see if I could learn anything from the 2 meter rag chewing crowd and as such locate the ham radio crowd. My efforts were rewarded by picking up a crystal clear reception of the local obnoxious overpowered country music station. So much for that.
Still later on I located a file on the usenet listing test sights. Just happened to list one in lansing michigan that was a short drive away.
After getting the info for the test location I crammed the 2 days before the test and before reading the last half of the test questions I stopped over to see a friend figuring I could cram the last half later that night.
Well, a bit later after consuming massive amounts of booze, being dropped off at home I remembered I should study the last few questions. Nah, passed the material before 2 times, forget it. 10-12 hours after blacking out I woke up feeling extra perky from hangover effects I took off to the test location. The local hams are friendly enough and did not seem to object to having a living corpse take the ham test. Passed the novice material ok but missed passing the tech segment. I remembered the entire test question list from the test so I looked up the questions some weeks later. A .1% tolerance resistor ? What the ****!!!! Of course if the FCC was sane I would have passed that question and got the no-code right there.
Some weeks ago I went psycho and just plain memorized the entire tech question and answer list. And recently I passed the tech segment 23/25 then the general written 20/25 and then died on the advanced 15/50.
Suppose one day I'll study the advanced test book just to find out what the heck an L-Pi filter is and why or why not it is best for reducing harmonic radiation more than other filter system. :) I only know digital

electronics. harmonics never came up when I studied those filters. :)
So in a few months I'll get my license after 5 long years of trying for it
cool eh ? :)

4382. Miss Manners in the Novice Sub-bands?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-16 04:36:32 UTC
From: drenze@icaen.uiowa.edu
Message-ID: <1993Nov16.043632.12907@icaen.uiowa.edu>
Source record: 274174

I've got a little question. I was tuning across the 80-meter novice subband tonight, and right at 3700kHz I noticed a QSO taking place at 20+ WPM. It was coming across S9+10 when everything else was coming across S6-7, and that combined with the fact that they both sounded like 0 call-signs makes me think that at least one of these guys might have been Iowans, and, at least with *my* equipment, this was the only part of 80 that sounded like it was reliably open at that time (I started hearing some other stations outside the novice subbands later--I was just looking for code copy).
Now, for my question. (And, BTW, I'm not trying to condemn anybody's practice, call anybody a lid, or anything else--I'm genuinely curious.) What is the correct etiquette for running high-speed code in the Novice subbands? It wasn't anything big tonight, since even that area was uncrowded, but I'm just curious...the novice subbands are supposedly "training bands" (anything like training pants or training wheels? ;-) ;-) ;-) <- for the humour-impaired) for lowly Novices/Techs like me. If there's a big demand for them by novices/techs, should higher-class licenses QSY? *do* they QSY?

Peace es 73 de Doug N0YVW

NOTE: The Effective Sunspot Number for 14 NOV 93 was 39.6.
The Full Kp Indices for 14 NOV 93 are: 1+ 2o 2+ 3- 3o 4- 2+ 3-

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7618 (N08E35) has
shown a decrease in activity during the period, but remains
bright. Region 7619 (N10W32) has become a spotless plage.

Solar activity forecast: solar activity is expected to be
low to moderate.

The geomagnetic field has been at quiet to unsettled levels
for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled during the first two days of the

period. Day three will be active due to a favorably located
coronal hole.

Event probabilities 16 nov-18 nov

Class M 50/50/50
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 16 nov-18 nov

A. Middle Latitudes
Active 10/15/35
Minor Storm 05/05/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 50/60/45
Minor Storm 05/05/15
Major-Severe Storm 05/01/05

HF propagation conditions were normal over all regions.
Similar conditions are expected over the next 48 hours.
Conditions are expected to deteriorate slightly on 18 November,
particularly on transauroral and transpolar paths, due to
anticipated enhancements in geophysical activity associated
with a well-placed coronal hole.

------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>a bit more about its capabilities (and price!).
It does suppress receiver noise. It doesn't really pull voice "out of the
noice" but it does make the noise go away when no one is talking. It's
a wierd effect but it does make listening easier.

It has a CW and a Voice mode (red button selects).
The filter can take out tones (one button) and/or random noise (another
button).

One can also get bandpass filtering - 2 buttons select 3 bandwidths -
different ones for voice and cw.

>Any enlightening info on the DSP-9 ?

voice cw
3.1k 500
2.4k 200
1.8k 100

It also has a volume control knob. One annoying thing is that they used
RCA connectors instead of mini-phone jack.

Chris,

I was out in Ogden UT back in June for a week on Govt. Business. I took my 2 meter Handheld with me. I ran into the same problem as you, no one would talk to me either. I happen to be on of those "old timers" (got my license in 1968) with advanced class license. What both of us have experienced is the fact most Hams tend to be cliquish, that is they dont talk with people they are unfamilar with. I know this is a very broad generalization but, this statement made from the experience of having to live in cities other the one in which I spent most of life.

As a interesting side note I was living in the Northern Va area of Washington DC metro, while talking to a friend of mine from work KD4DN, we were told "Get the hell off this repeater" by some unkown person. So dont feel to bad about being ignored, the DC area has more obnoxious Ham per capita.

4391. Using modified HT in emergency

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-16 13:22:46 UTC
From: nimtz.1@nd.edu
Message-ID: <nimtz.1-161193082246@nimtziici.edmedia.nd.edu>
Source record: 274171

I may have missed a discussion about this, I've been unable to read the news for the past few days.

Last night on the RACES/ARES net someone read an article about a ham that used his HT to contact the sheriff department to summon help for his injured friend. They were hiking or something like that in a remote area. It seems that his friend had fallen and was badly injured.

The ham attempted to reach someone on a number of amateur repeaters as well as attempting to make a connection using a cellular telephone. Unable to reach anyone he then climbed to the top of a nearby hill and attempted once again to summon aid via the amateur repeaters and cellular phone. Only when these methods failed did he use the police frequency. He contacted the sheriff department on one of their administrative channels, not a dispatch channel.

Emergency help arrived and his friend was taken to the hospital. The ham wasn't so lucky. The sheriff department had him state that he used the police frequency illegally and persuaded him to surrender his modified HT. It was not mentioned if the FCC got involved or not.

The person who read the article on the net (the RACES repeater trustee) seemed to think this is a perfect example why one should NOT modify their HT.
The RACES Radio Officer, acting as net control, mentioned that he had another opinion but the RACES net was not the place for that discussion.

I think that if the ham's friend was so badly injured he couldn't transport himself to help then the ham was justified in using whatever means he had to summon aid. From what I heard this sounds like a "life threatening" situation.

Is this a case where the sheriff department's nose is out of joint or what? Is it just an urban legend that a person can use any radio or frequency to summon aid in life threatening emergency? Or is it permissible in the FCC's eyes but not permissible to the county mounties?

While the dynamic range is an useful indicator of the selectivity of
the receiver, it does not have to be the outer of limit of the range
over the receiver is useful. Some options are:

i) From MDS (minimum discernible signal power level) to the power at
which you might cause damage to (any stage of) the receiver.

ii) From the MDS to the 3rd order intercept point - the power level at
which the 3rd order products are as strong as the signal, making it impossible
to tell them apart. But this begs the question: At what spacing of the tones
will you determine the intercept point?

iii) From the MDS to the point at which a preset level of gain compression
(is 1db a reasonable hurdle?) takes place when a signal is injected 20 Kcs
(or some other spacing?) from the signal being detected.

iv) From MDS to the the point at which the 2nd order product (image) or
any other mixing product other than the desired one reaches a preset level.

My choice: The power level at my receiver terminal induced by NN9G (a QRO
maven who lives 200 yards from my house) working split, up 3kcs, that
prevented me from copying 9M0S, a station that he and I were trying to work
a while ago.

Of course, all this assumes that non-linear elements such as AGC, variable
gain etc are absent.

And in addition to the above: you would need a few bits (8?) for representing the signal at MDS and some more to reduce quantization/sampling errors using reasonable filters.

By my calcualtions:
144 db range: about 24 bits
signal representation at MDS at least 8 bits (would be higher for IF)
head room to reduce errors (how much?) 8 bits
----
40 bits

Wow. I think I will go and read up on AGC.

I am thinking of buying the Yaesu FT-530 dual-band hand held.
Does anyone know of any modifications for this radio?
In particular, I was wondering if the receive bandwidth could
be increased like on some of the Icom handhelds.

Any help would be appreciated,

Thanks,

Dave Shively KC4HUM dgs@draco.larc.nasa.gov

The higher class licenses have privilleges in those bands, so they can use them. But what make you think they are not a novice or tech? Your post did not indicate that they were clearly a higher class, just that they used higher speed code. I've worked novice/techs that had no problem with my code speed. And I've worked other extras in the novice bands. I've also found some nice DX around 21.140, both calling cq and answering mine.

During novice roundup, I will go and spend some time trying to hand out contacts. So many extras would answer my cq that I had to sign /E.

Sometimes, especially on 80, one is limited by the antenna. Perhaps one or both could only get down to the novice sub band because his antenna was cut for the phone band. So CW contacts on the 80 novice sub band was all they could do.

I guess the short answer to your question is there is not an accepted practice of not using the novice sub band if you have a higher class license. Except, of course, on 40 meters.

>why you would want to converse with them.

Oooh, let me talk about cliques. They exist, and some of them can be really nasty. But there are others (try our machine for example) where everyone is welcomed. We have some rules we ask you to follow faithfully when you come on our repeater, but we won't be hard on you if you don't. Our number one rule is that there are no rules. We're fully interrupt driven. If you have something to say, jump in, otherwise you'll be left out forever. :-) No boring roundtables for us.

> "W11WWW Monitoring" is a clique - call. some member of his clique will

>There are terrible penalties for any clique member calling CQ or talking
>to strangers that make the Wouff Hongg seem tame.

Calling CQ on a repeater is a regional thing. In some areas it's encouraged, and in others the "monitoring" line is SOP. It's not necessarily a clique thing. It's just a matter of local custom. When someone comes on our repeater and says he's "monitoring", I usually chime in and ask if he's heard anything. That usually throws them for a loop. :-)

> There are a few people worth meeting on the air, but it takes some
>effort to find them in some areas. It is worth the effort, though.

Yep.

[nice explanation of pi nets and why they're there deleted]

> Light loading is GOOD, your tubes run less current, last longer run
>cooler, your pi tank is running with a higher Q, which makes it sharper
>(and more difficult) to tune, but gives much more attenuation of

>harmonics.

Now here's where I want to pick a slight quarrel. Too light loading
will screw up the linearity of the PA. It presents an impedance to the
tube that's too far off the design load line. Normally you want to load
fairly heavily for best linearity. If you want less power, reduce the
grid drive instead. The tube is much less prone to distortion with
lowered drive than with too light loading.

> Your Pi tank can be adjusted to avccomodate non-50 ohm loads, rather
>like a reduced range ATU (It has as much range as many built-in auto
>ATUs.

You bet. When radios went to fixed 50 ohm outputs, they had to put
the pi net in another box and call it an ATU. That way they get to
charge you twice for what should have remained in one box.

> "You are no older than you think you are" is a cliche, but as I
>estimate my mental age at 6.125, perhaps it's not far off target. Age is

>If one were trying to do some state-of-the-art Digital Signal
>Processing on the audio from this direct-conversion receiver, how
>many bits of A/D would one need?

No. However, it does set an upper bound on the number of bits.

The two-tone dynamic range refers to signals outside the audio
channel. What you really want to know is the in-channel two-tone
dynamic range, which is often quite a bit less. Essentially, this
is the measurement of the receiver amplifiers without *any*
filtering. With a well behaved receiver, this measurement is
pretty easy to get. On the other hand, one can easily envision
a narrow bandpass filter reflecting signals at a mixer, resulting
in numbers that vary from excellent to poor, depending on the
exact frequencies used. The impedance of a filter outside its
passband is usually well behaved, as opposed to its in-band response.

Also, in practice, the system noise figure is quite a bit worse
than the receiver noise figure on HF, which often results in a
dynamic range degradation (10 or 20 dB wouldn't be unusual).
Proper use of an attenuator helps to restore the dynamic
range.

It is my opinion that a state of the art receiver would
allow phase locking your carrier insertion oscillator to a
broadcast carrier. DSP could then be used to convert the
signals to the desired pitch. Some operators attempt to
do this by zero-beating broadcast carriers, but most rigs
aren't really optimized for this.

From: derekt@col.hp.com
Message-ID: <2cav28$kvn@hp-col.col.hp.com>
Source record: 274181

I recently had a Mitrek transmitter channel element (KXN1088A)
re-crystalled and have been having trouble with it meeting the Motorola
temperature compensation specification. The company that re-crystalled it
has re-worked it once and improved it by a factor of 2 but by my measurements
its still just out side the specification.
This has started me wondering about the channel element circuitry and
the compensation network. Does anyone out there have a schematic of the
element and/or some input on the temperature compensation? Motorola says they
consider the element a non-repairable component and therefore don't
have a manual.

If you own or have owned an OMNI V, what are your opinions of the radio?The only exposure I've had to it is through reviews I've read and based on that, I'm contemplating buying a used one.

When I bring up the subject on the local repeater, I get some "questioning" tones of voices. Something akin to, "you really want to buy a Ten Tec?" One guy even told me, "Ten Tec isn't inexpensive, it's cheap!"

The Ten Tecs I've heard on the air sound very good. What have your experiences been?

Thanks,
Steve/AA7FL

I think you've gotten an extremely skewed sample there (one repeater incident that could have happened anywhere). I can say with reasonably authority that the repeater you were chased off of was not the 146.76/22?/44? statewide repeater run by the MD FM Assoc. (ever hear of the "Insomnia Net?"), the wide-area 147.18 machine, or even a machine run by a club I was associated with, the University of Maryland ARA, 145.49. In my travels across the country, it's been my experience that the DC repeaters are generally some of the most open and friendly around. In fact, it's one thing that I miss in Omaha (not that Omaha hams are rude, just that they take their repeaters a bit more seriously out here, with Skywarn tornado spotting, ARES/RACES, Winter search and rescue, etc.).

In short, all geographic areas have their cranks and repeater control freaks. They also have many more friendly people who welcome all hams who behave as gentlemen (ladies). If you are in DC, please try out the above repeaters I recommended. Tell them I sent you.

If the injury were life threatening and no other means were possible, then nobody could argue that he did the right thing as a friend/human being. Even the sheriff could not argue that. Assuming that the story is completely true, then he did the right thing irregardless of the consequences.

The shreriff's department probably knows nothing of amateur radio and they apparently felt that confiscation was necessary - even if they personally agreed with what he did. Whether or not the FCC will support him is the real issue here. When studying for my Tech license, one of the study questions emphasized that in an emergency, anything goes. I am not sure whether this is addressed in part 97 or how much is left for interpretation.

I hope that the FCC supports him on this and sees to it that the radio is returned. They may ask him to 'unmodify' his radio. If he is not supported by the FCC, is fined and demands a trial, I don't see how a jury (or even a reasonable judge) could convict him. This is all assuming that all facts are supportable and it can be shown that he had tried all other avenues of communication...

I don't know about "everyone else combined"; I'd guess Ed Hare is more
than a match, for one (and that's no bad reflection on Gary Coffman).
However, it turns out that Gary Coffman is not the Gary being bashed.
(Not this week, anyway ;-) It's Gary McDuffie (whose callsign isn't
known by the callsign.cs.buffalo.edu server...).

Source record: 274194

Greetings,

I understand that the U.S. and Canada have "instant" reciprocal license privileges. My copy of the FCC 97 rule book mentions that Canadians visiting the U.S. must add a "/VE" to their call sign. What, if anything, to U.S. hams need to add to their call when visiting Canada?

Thanks!
Brian

> Now, for my question. (And, BTW, I'm not trying to condemn anybody's
>practice, call anybody a lid, or anything else--I'm genuinely curious.) What
>is the correct etiquette for running high-speed code in the Novice subbands?

Well, if you're a Novice, you haven't got much choice (I was doing around 25WPM
just before I upgraded to Advanced). If it was two Extras looking for a quiet
spot well away from the slavering DX hounds (:-), well, think of it as code
practice ;-).

>If there's a big demand for them by novices/
>techs, should higher-class licenses QSY? *do* they QSY?

If the Novice sub-band is crowded, it would certainly be courteous to QSY,
unless the higher-class licensee is working a Novice or Tech.

In article <msattlerCGKqzF.2L2@netcom.com> msattler@netcom.com (Michael Sattler) writes:

I live in SF and wonder what freqs you've been listening to;
each evening there's a "Going Home Club" for commuters where
new users are often welcomed, and I often hear newbies (to
both U/VHY and HF) talk with the same old voices on 145.15.

I'd appreciate getting the "North CA simplex frequencies" from
you. Lookiny forward to meeting you on the air...

I can certainly give them to you - I merely looked them up in the ARRL
Repeater Directory:

Northern CA Simplex frequencies for the 2m band:

146.415, 146.430, 146.445, 146.460 (Used for Remote Bases), 146.475, 146.490,
146.505, 146.520 (Calling freq), 146.535, 146.550, 146.565, 146.595, 147.405,
147.420, 147.435, 147.450, 147.465, 147.480, 147.495, 147.510, 147.525, \
147.540, 147.555, 147.570, 147.585, 145.695 (RACES ALERT).

Disclaimer: My typing is not too good - check these frequencies for yourself!

I'm happy to meet on the air - simplex could be tricky with HTs since
I am in San Jose - unless I find a high point and use a better antenna
- there are plenty of repeaters that we could both hit I'm sure.

My club has had an Omni V for a few years, and we love the radio.
It has been on a few field days, and does a good job always.
We havent had to avail ourselves yet, of TenTec's service dept.
But we may soon. Our Omni transmits and receives 200 Hz high.
That's the only problem we ever had, and we get good reports.

I think (or hope!) you are slightly confused. You seem to say I should sign
"VE7CEI/VE" if I go to the US. I think the correct way would be "VE7CEI/W7"
(or whatever call area I am in).

Certainly I would expect visiting Americans to sign "W7XZY/VE7" in BC.
The DOC regs require visitors to add the Canadian call area (eg. VE7) to their
home call, either as a suffix or prefix, I believe.

4419. Alpha Bravo: German alphabet with Morse

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-16 20:29:28 UTC
From: bck1@cl.cam.ac.uk
Message-ID: <1993Nov16.202928.4287@infodev.cam.ac.uk>
Source record: 274198
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc

From Anno Siegel <anno4000@w172zrz.zrz.TU-Berlin.DE> I have
received the following German alphabet. Not only is it an
orthodox(ish) phonetic alphabet but it also gives you the Morse
alphabet: a syllable represents a dash if it contains 'o', a dot
otherwise.

++++++++++

a - Arno Italian river
b - Borvaselin Medicament (prob. fictitious)
c - Coburg-Gotha Town
d - Doria Italian surname
e - Ernst Name (male)
f - Friedrichsroda Town
g - Gomorrha Biblical town
h - Herrenzimmer Study, smoking-room
i - Ida Name (female)
j - Jawohl Odol Slogan advertising Odol, a gargle
k - Kolberg Ost Town (prob. fictitious)
l - Leonidas King of Sparta
m - Motor Motor
n - Nora Name (female)
o - Oekonom Farmer, economist
oe - Oekonomie Economics
p - Per Motorrad By motorcycle
q - Quohnsdorf bei Forst Town (prob. fictitious)
r - Revolver Revolver
s - Sabine Name (female)
t - Tod Death
u - Uniform Uniform
ue - Ueberkonto Super bank account (contrived)
v - Verbrennungstod Death by fire
w - Weltnordpol The worlds north pole
x - Xolabaphon Musical instrument, if anything (contrived)
y - York Yellowstone Town (prob. fictitious)
z - Zoroaster Iranian religious reformer (Zarathustra)

For some reason, ae (a Umlaut) is not included, though oe and ue are.

>At the Lawrence Hall of Science in Berkeley they have the electromagnet Dr.
>Lawrence used to construct the first cyclotron sitting out front; it's about
>9 feet tall, and was part of a commercial spark transmitter made surplus by
>the advent of tube transmitters. (BTW, Lawrence was a ham, and they have
>his spark rig on display inside.)
>
>My question is, why did spark transmitters need big electromagnets?
>Were they basically big generators, generating EMF by rotating a coil
>through the magnetic field?

The electrical power in the system I saw modeled, used a generator shaft
driven by a steam engine to produce the DC required to power the AC
Alternator a triple phase system, custom built for the "high frequency"
generation required to limit the decay time inherent in existing spark gap
technology.

>It wasn't anything big tonight, since even that area was uncrowded, but I'm
>just curious...the novice subbands are supposedly "training bands" (anything

There are believe it or notmany US Hams that are only too Happy to operate CW.
Some of these Hams are Novices, as there is no longer a time limit on the
life span of the "learner's permit" some of these Hams have never found
the need to upgrade, and have better than 5 wpm Morse Code speed. They
must by Law operate in their allocated frequencies, also any of their old
buddies who have upgraded, must communicate with them in that portion.
Unlike the freeways, 5 wpm is not the maximum speed allowed, further the
higher band priveleged General, Advanced, and Extra's are not limited to
their "extra" band allocations. Be happy there appear to be some
high-speed boys there. It will help you with your code speed. Further you
may befriend an "Elmer" to help you attain the proficiency to upgrade to a
higher class. If and when that happens, become an "Elmer" to someone else,
and give him the same opportunities, and assistance to learn.

That's the way I see it.
By the way, I know a novice who can copy about 55 wpm.

4424. FCC fines repeater owner for interference to air emergency freq

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-16 22:12:38 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseCGLv13.BBM@netcom.com>
Source record: 274209

Heard on newsline that the FCC issued an approx 5K fine on a repeater op in NJ because his repeater had a spur that transmitted on 243MHz, an air emergency freq. But it appears that the FCC guy (in NYC) didn't first contact the repeater op to tell him that there was a problem, but just issued the fine. That the repeater op was also an engineering type that works for several broadcast stations, and that the people at the FCC probably had several phone numbers for him in various files, and contacting him should have been easily done. And that the repeater op had no reason to suspect that his repeater even had a problem. Something like 700mW of power on the wrong freq (243) was transmitted when the repeater keyed up to repeat on the 220 band (repeater repeated on 220, just had that spur on 243).

I had thought that the FCC procedure would be to contact (mail or even try phoning) the ham with the malfunctioning equipment, to tell him that he's causing a problem, and shut down and get it fixed. And that the fine would happen if that warning was ignored. Unless the problem was "aggreous" (an obvious willful violation, like cursing out the police on their radio channels), then you'd get fined immediately.

Looks like the FCC guy might be in trouble for not following the correct procedure with the faulty repeater.

(the above is from memory, Newsline can be heard at 708-289-0423, again if memory serves.)

: >Sure beats the 12 week wait times I was reading about this summer while
: >studying for the exams.

: I've heard wildly divergent tales of late...turnaround times for initial
: licenses ranging from 30 to 90 days. I'm wondering if there's a big
: difference in turnaround times, depending on which VEC is handling the
: front end of the paperwork?

: Anyone know?

My experience, for what it's worth...

I took my test May 15 and recieved my ticket August 5.
After waiting 8 weeks, I was talking to a couple of W5YI guys at a swap meet and they swore that ALL their new licenses were coming back in six-seven weeks. They encouraged me to check on the situation as they thought maybe something had gone wrong.

My findings:

The local VE's sent the paperwork out on the May 17th, (overnight mail).
ARRL, (Association for Retarding Radio Licensing 8-)), sent it to the FCC on or about June 6. That's about 18 days. In any case, it was somewhere other than at the FCC from May 17 and June 6 or 7. I talked the the folks at ARRL and they were quite nice and helpful. They said that May is a heavy test month and that they are understaffed.
W5YI claims they complete the process in 1 day.

Of course, W5YI isn't busy dealing with critical stuff like:

Wanked all Unincorporated Areas
Wanked All Cities
Wanked All Counties
Wanked All States
Wanked All Countries
Wanked All Planets
Kerchunked All Repeaters
etc. ad nauseum. 8-)
8-)

I don't mean to disparage contesting or the time honored
"Worked All ____" aspect of amateur radio, but if bringing new hams
on line is as important as everyone says, shouldn't that have priority?

I don't know if W5YI can deliver as fast as they say or not.
It might be fun to collect reports from new licensees and make the
comparison.
For now I suggest that new licensees go through W5YI, if available.

Anyone out there have any data on this, one way or the other?

Date: 1993-11-16 22:41:40 UTC
From: genew@teleport.com
Message-ID: <2cbkv4$sn2@kelly.teleport.com>
Source record: 274205

Dave G Shively (dgs@draco.larc.nasa.gov) wrote:

: I am thinking of buying the Yaesu FT-530 dual-band hand held.
: Does anyone know of any modifications for this radio?
: In particular, I was wondering if the receive bandwidth could
: be increased like on some of the Icom handhelds.

: Any help would be appreciated,

: Thanks,

: Dave Shively KC4HUM dgs@draco.larc.nasa.gov

This is a compilation of modification information I received in response to
my posted query and the info faxed to me by Yaesu.

There are at least 2 board layouts out there.
Note that while the jumper pad numbers have not changed, the board positions
of the pads have.

YAESU FT-530

Expanded Receive 110-180, 300-500 MHz
Expanded Transmit 130-180, 400-458+ MHz
Expanded Recieve 800-950 MHZ

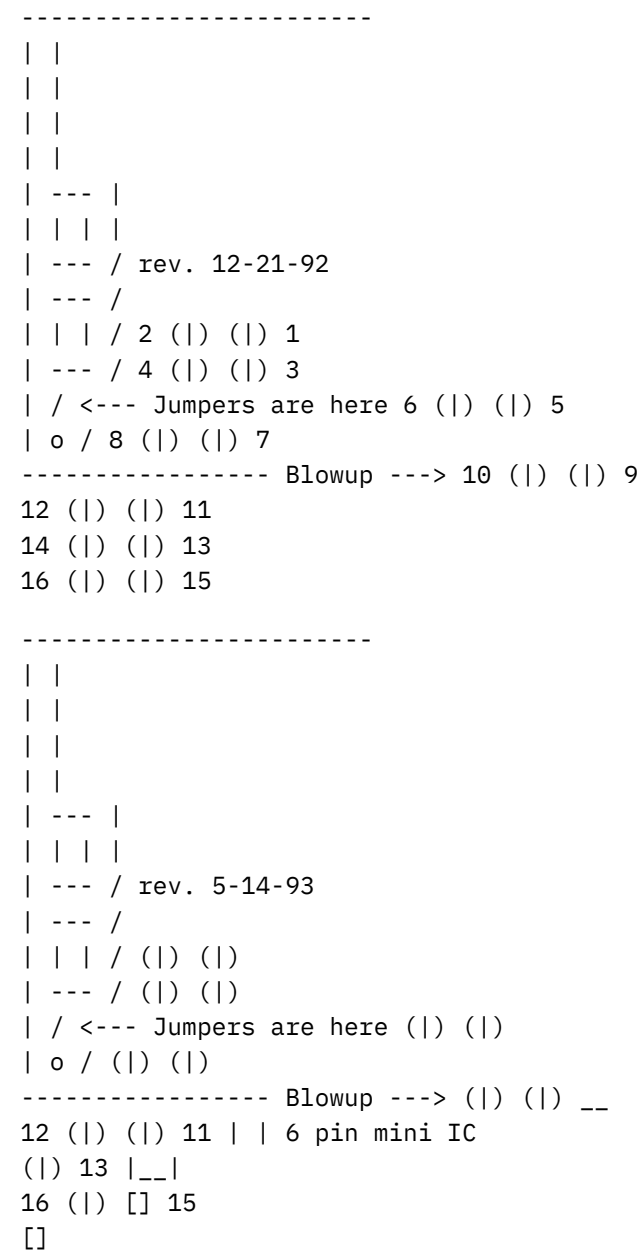
NOT LEGAL IN U.S.A - FOR EXPORT ONLY (The expanded transmit part)

o Keep that magnifying glass handy! 8-)
o Be aware that your repeater memories, ect. will be erased. :-(
o Remove Antenna and Battery.
o Remove four screws on bottom holding battery track.
o Remove the four (black) screws holding rear case.
o Slowly... open the front cover from tranceiver and lay both halves on
table.
o Note positioning of white paper insulator in right half of radio and
lift out
(don't throw away)

o Carefully locate Jumper Pad 13 and remove solder.

---
o NOTE: If you wish to restrict transmit to the ham band,
Carefully locate Jumper Pad 15 and remove solder.
Otherwise, leave pad 15 in place.
---

o Re-install white paper insulator, make sure ground tab slides through the paper insulator.
o Close radio back up (Careful not to pinch the ribbon cable near lithium battery when closing halves).
o Re-install the four (black) screws holding rear case.
o Re-install the four (small silver) screws on bottom holding battery track to radio body.
o Attach Antenna and Battery.
o Turn off Radio.... Press and hold both arrow keys while turning on the Radio.
o Modification Complete.



Pad 15 now a vertical pad with a tiny "zero ohm" resistor.

My rig got confused after this mod and it was neccessary to reset the
CPU. (The 70cm repeater offset register got fouled up and though it could
be incremented and decremented by the normal 50khz,
it went 0.01mhz, 0.06, 0.11, ect. instead of 0.00mhz, 0.05, 0.10, ect.).

Reset command: turn radio on while holding "MR" and "FM"
(Damn, memories erased again!)

Thanks

I think I have some information to add to this topic.

In article <nimtz.1-161193082246@nimtziici.edmedia.nd.edu>, nimtz.1@nd.edu
(Rick Nimtz) writes:
[...About a ham using a Sheriff's frequency to get help for an injured
friend...]

I was the injured friend. While mountain biking in San Diego county,
I faceplanted hard onto sharp rocks.

In article <1993Nov16.174516.15328@rsg1.er.usgs.gov>, bodoh@dgg.cr.usgs.gov
(Tom Bodoh) writes:
|> If the injury were life threatening and no other means were possible, then
|> nobody could argue that he did the right thing as a friend/human being.

At the time of the crash, we didn't really know the full extent of my
injuries. There was a lot of blood from some severe cuts on my nose,
and my nose was obviously broken. We didn't know if there was a
concussion or any neck injury. I was consious and lucid.

So at the time we had no proof that there was a life threatening
injury. But we certainly had no proof that my injuries were *not*
life threatening. We did know that I was going to need treatment in
an emergency room.

So were there any other means to get help beside using the Sheriff's
frequency? In the parking lot before the ride started, we tested a
cellular phone, but it was not in range of any cells, so cellular
was out. After I crashed, we tried several amateur repeaters. It was
pretty frustrating because we could hear them, but we could not hit
them. After my friend moved, he tried amateur repeaters again with
no luck. Then he tried some commercial repeaters, also with no luck.
Finally, he contacted the Sheriffs on one of their administrative
channels. At that point, his options were to use the Sheriff's
frequency or ride out to find a phone. The nearest phone was about 30
minutes away by bicycle.

My friend was trying to behave as legitimately as he could. He gave his
callsign. The person he talked to never told him to leave the channel.

On that day back in August, I would not have hesitated to do what he did.
Now, I'm not so sure.

|> I hope that the FCC supports him on this and sees to it that the radio is
|> returned.

Well, it was the FCC official who wrote the affadavit my friend signed.
In the affadait, my friend acknowledges that it was wrong of him to use
the Sheriff's frequency and that he was voluntarily giving his radio to
RACES. The FCC official said that if my friend signed the affidavit,
then the official would reccomend to Washington that they not proceed
against my friend. The official reminded my friend that his offense was
punishable by 1 year in jail and a $100,000 fine. So it is doubtful that
the FCC will be helping him much.

|> [...] This is all assuming that all facts
|> are supportable and it can be shown that he had tried all other avenues of
|> communication...

My friend presented photographs and doctors' reports to the FCC and
Sheriffs. There were numerous witnesses when he was trying the amateur
repeaters, although only two of them are hams.

I hope this information is useful. Does anyone have any comments?

4429. One Antenna Two (Repost)

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-16 23:01:16 UTC
From: romanenkod@agcs.com
Message-ID: <2cbm3s$434@vlsi.agcs.com>
Source record: 274207

This is a repost of a message I sent one week ago. To date, I have not seen any responses. I am assuming that it never made it off site...

>>>>>>>>>> Original Message <<<<<<<<<<

In the process of looking at dual band (2m/70cm) mobile radios, I have observed some radios come with one antenna lead for both bands, others, two antenna leads, one for each band.

For the radios with one antenna lead, the obvious need is a dual band antenna. However, my question lies in those radios with two antenna leads. What are the advantages / disadvantages of:

1. From a two antenna lead, run separate coax, mount two single band antennas on the vehicle.

Adv: - Each antenna tuned for a particular band

Dis: - Two antennas on top of vehicle
- Two coax runs required

2. From a two antenna lead, run into a duplexer, run coax to dual band antenna.

Adv: - Single antenna on vehicle

Dis:

In pricing the two options, the cost for each setup would be about the same.

Any additional information on the above would be appreciated.

Still waiting for my license...
-Dan

Society.

Taming static crashes on the low bands

One of the major problems of RTTY contesting on the low bands
is static crashes. Lightning storms at various locations
around the world create most of the QRN that prevails on the
low bands. These pulse-like, randomly spaced wide band signals
are killers of digital signals. They are natures spark
transmitters. Not only do they clobber the digital data codea,
they also cause shifting of letters into figures and
eventually into garbage.

Here are some ideas that can improve digital reception on the
low bands:
1. Turn down the receivers RF gain control so that only an
occasional static crash kicks the S meter. Then increase the
audio gain control to compensate for the signal level needed
to drive the TNC. Whatever AGC time constant is left will be
faster than before, which is good. (Always use AGC FAST on
RTTY, rather than AGC OFF. Some AGC is better than none, as
far as your ears are concerned. Loud static crashes are not
the only noise or clicks that will suddenly blast your ears.
Slow AGC will actually lengthen the statics pulse duration fed
to the TNC and will make things much worse.

2. Using the RF attenuator on your receiver, insert 10 Db of
RF attenuation on 40 or 80M. Then compensate for the TNC
signal input loss by increasing the audio gain control. The
attenuator reduces the input sensitivity (not the RF gain).

The advantage here is that you help prevent static and noise from actually entering the receivers RF input circuit. This desensitization will also reduce local noise pickup (computer noise, monitor flyback oscillator radiation, TV flyback noise, etc.) because if the coax feedline does not have a good match to the antenna, it will also pick up local manmade noise along with the static.

3. For quieter reception, consider using receiving antenna configurations that have a shorted DC path, such as folded dipoles or closed loops. They will help minimize rain and snow static. Receiving antennas should be located as far away from your transmitting antenna as practical, and should be oriented for minimum pickup from your transmitting antenna. Heights of 10 or 15 feet are quite ok. They should not be vertically polarised, and should be placed away from man-made noisemakers.

Readable digital signals under heavy static conditions is our goal. If you can't read them, you can't work them. So ... what good is antenna gain for receiving when static crashes drown out the desired signal? The need IS for good signal-to-noise ratio -- an absolutely crucial requirement in digital reception. When you make the signal weak, and you make the interference weaker, then you have gained in readability. And it is truly amazing how weak an RTTY signal can be and still be copied. It actuallly rivals CW in that respect, except that your brain does none of the work.

WAE RTTY Contest rules part 3

Awards: Certificates will be awarded to highest scorer of the different classifications in each country (a reasonable score provided). Continental leaders will receive a plaque. Each participant with at least half the score of the continental leader will also receive a certificate.

Logs and summary: Use separate logsheets for each band. Indicate clearly all band changes. Duplicate contacts must be clearly marked in the log. If more than 100 stations have been worked on a band, a separate dupe sheet is required.

(Summary sheet, logsheets, dupesheets, and QTC records sheets may be copied from the RTTY Contesters Guide). NOTE: Logs violating these rules can be regarded as checklogs.

Deadline: All entries must be received by December 15, 1993. Mail to:

WAEDC CONTEST COMMITTEE
PO BOX 1328
D-8950 KAUFBEUREN
FEDERAL REPUBLIC OF GERMANY

Good contesting

IPS weekly report
---
5 November - 11 November 1993

Issue no.: 46

Date of issue: 12 November 1993

Date 05 06 07 08 09 10 11
10cm 96 97 95 92 90 90 89
A 28 28 20 15 10 12 (06 estimated)

Summary of activity

Solar activity was very low 5th to 10th November, and low on 11th.

The geomagnetic field at Learmonth (WA) was unsettled to active 5th-6th, with a short period of minor storm levels on 6th. The field was quiet to unsettled 7th-10th, with brief active levels on 7th, and quiet on 11th.

Ionospheric F2 critical frequencies at Sydney were mostly near predicted values except for brief depressed periods of up to 30 per cent on 5th, and 20 per cent on 8th. Spread F was observed on 5th, 7th-8th, and brief sporadic E observed over the period 5th-9th November.

Forecast for the next week (12 - 18 November)

Solar : Low.

Geomagnetic: Quiet with possible osolated active levels on 18th.

Ionospheric: Near predicted monthly values to 20 per cent depressed.

From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <CGLzHn.H1B@news.Hawaii.Edu>
Source record: 274214

This notice is to warn all net posters that within our elements is a small group that is attempting to practice censorship; if they do not agree with your viewpoint, they will contact your postmaster to complain that you are intentionally attempting to create animosity on the net or that your article has no relation to the newsgroup topic.

One person has done this to me [re: BARF = Bestiality Amateur Radio Fraternity, which was my tongue-in-check response to the Lambda gay radio club {BTW, my postmaster thought the BARF article was funny}]; now, someone else, who has been posting articles on .policy in which some have found a little offensive, has been reported to his postmaster [which is funny, since he is the postmaster of the system he posts from!].

So, my friends, beware! There is no absolute freedom of speech on .misc and .policy. These folks will decide when you've crossed the line [which they themselves have drawn] as to what's ``proper'' and what's not. [And they're doing this from their corporate accounts on company time; hmmm, I wonder if their employers realize this....]

Jeff NH6IL (ex: WA6QIJ)

The early Marconi type spark transmitters used, I believe, an ordinary induction coil (similar in principle to that used today for the ignition system in an auto). The low voltage primary coil was self-interrupted (like a buzzer) and keyed with a morse key. The high voltage secondary winding had a spark-gap, one side of the gap connected to ground, the other connected to an antenna. A raspy broad-band signal was thus generated. The only tuning

was that provided by the antenna circuit, although later refinements by Marconi introduced some LC tuning. Another refinement was to fit, into the spark-gap, a motor-driven rotating toothed wheel, which modulated the broad-band noise and introduced a more "musical" note, thus allowing skilled operators some means of discriminating between the many signals on the air.

If you have access to early issues of QST (say pre 1930), you will find many descriptions of amateur spark stations- fascinating reading.

>
> 73s,

I used the following instructions on mine and it worked as advertised.

I was asked about modification of the DJ-580 for out of band operation.
They couldn't have made it much easier:

- Remove battery pack.
Use a small philips screwdriver (ie. jeweler size) to remove the 4
screws
that hold the metal battery slide on the radio. These are at the outer
corners of the metal clip.
- Gently lift off the metal clip. Note that the two power wires are
on this so don't pull it too far off. Also note that there is a small
metal tab on this clip that is inserted in the battery release slide.
You will want to insert it back in the same hole when you replace the
metal clip.
- You will see a small RED wire loop as well as a small BLUE wire loop.
You can gently pull these up with some needle nose pliers. Cut the
loops and then cover the ends so they don't contact anything. My
method was to cut them not quite at the top, so one wire was a bit
longer than the other. I then slipped a small piece of heat shrink
tubing over the wires so the ends could not contact each other again.
This is probably adequate. I took a CLEAN soldering iron and used that
to shrink the tubing a bit just so it wouldn't move.
- Push the wire loops back into the radio. The metal battery clip will
push up against the circuit board running down the center of the radio
so you don't want the wire loops crossing over the circuit board.
- Replace the metal plate -- remember to stick the projection into the
small hole on the battery release slide.
- Replace the battery pack and reset the radio. You reset the radio by
holding the function key down and turning on the power. Note that

this clears all memories, so make the mod early -- this thing has
40 memory channels - a lot to reprogram.

Hope this helps,
Bruce/KQ4TV

Hi folks....not sure if this is the right place to "place" this article but I've got to start somewhere....Problem is....I have a Marantz Model 4300 Stero 2=Quadradial 4 Receiver (purchased in 1974) that I need to find an ON/OFF switch for! Called Marantz and they tell me that part is no longer available. I know that the switch I'm looking for is out there somewhere but I need some help finding it. Any information would be "greatly" appreciated! Thanks in advance.

: alphabet: a syllable represents a dash if it contains 'o', a dot
: otherwise.

: [...]
: For some reason, ae (a Umlaut) is not included, though oe and ue are.

What is morris code for a Umlaut (□)?

A book that I have says the the Verbal alphabet used when spelling in
a noisy environment, or over the phone is:

Anton
Berta
Caesar
Dora
Emil
Friedrich
Gustav
Heinrich
Ida
Johann
Kaufmann
Ludwig
Martha
Nordpol
Otto
Paula
quer
Richard
Siegfried
Theodor
Ulrich
Viktor
Wilhelm
Xaver
Ypsilon
Zeppelin
Eszett (for □)

It does not specify what is used for the umlauted vowels. (The reference is ``Cassel's Contemporary German: ...'' p. 163 It was published in 1993 by MacMillian.)

I havn't noticed this mentioned in the last few days, but if I'm repeating somebody else, my appoligies.

For those of you who do some prefix hunting, effective December 1, Canada will have a new prefix. Currently VE1 represents Nova Scotia and New Brunswick. The new prefix will be for New Brunswick only. The prefix will be VE9. So if you are dialing around down on HF and you hear VE9, don't be too surprised.

The change is not mandantory for existing amateurs, however, it seems as though lots of people will be changing.

I know that Maxon did the FCC certification for the radio, but that may
or may not determine who designed, or manufactured the units.

Sure do.

Your best bet will probably be ftp.cs.buffalo.edu:/pub/ham-radio/mods

For those still thinking about using ham.eetech.mcgill.ca, don't.
This site is closing PERMANENTLY on 19 November, 1993. All the mods
which are available at the latter site have been moved to the former.

>
>73, John WA8ZPF

I don't know who you are John so that must mean that
you don't know me. Since I was the one who started
this thread, I'll take it your refering to me as
"..the same types that look offended when....."
from your reply above.

I don't mind spending my money at RS or any other store
when I see something I like. Usually, price doesn't
enter the picture if I want something. However, I have
been getting RS catalogs "FREE" for something like
20 years now. When I have spent over $15,000 on just
computers from them and about half that on parts, scanners
etc. over the last ten years I don't expect RS to
"cheap out" by trying to charge me $3.00 for a catalog
now.

So as to your comments about me trying to make a killing
at hamfests, well, I don't bother going to these. I
don't care for them or some of the "opinionated arses"
who like to make stupid comments about people they
don't know.

>for lowly Novices/Techs like me. If there's a big demand for them by novices/
>techs, should higher-class licenses QSY? *do* they QSY?

I'm assuming you couldn't copy their calls Doug, so I'm asking this
as a retorical question. Are you sure they *weren't* Novices? Some
people have a natural talent for high speed Morse, and little interest
in other aspects of amateur radio. I've known some Novices who could
bat along at really outrageous code speeds, but had no interest, or
in some cases professed no ability, to learn the technical material
required to upgrade their license class. Thus they were "stuck" in
the Novice segments. This so called idiot savant talent is rare, but
not so rare that you don't run across it ocasionally, especially with
purely mechanical talents such as Morse.

On the other hand, if neither of the stations were Novice, or coded Tech,
licensees, then the behavior *was* somewhat rude.

4442. How does one zero-beat a signal?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-17 03:54:50 UTC
From: trier@odin.ins.cwru.edu
Message-ID: <2cc7aa$qp8@usenet.INS.CWRU.Edu>
Source record: 274220

OK, two different threads have touched on this, so I guess I'll ask the question: How does one zero-beat a CW signal?

I understand the why and the theory behind it, but the procedure is not obvious. The license manuals and the _ARRL Handbook_ praise the merits of zero-beating, but none say how to do it!

The radio in this case is, I believe, a Kenwood TS-830. I'm most interested, however, in the general procedure applicable to most rigs.

4443. Re: Radio Shack HTs

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-17 03:59:30 UTC
From: LMARRIN@delphi.com
Message-ID: <931116.82770.LMARRIN@delphi.com>
Source record: 274221

Ken, I've heard from several sources that the Radio Shack HT is made
by Maxxon, but the basic design of it is derived from the older Icom O2AT,

with several major redesigns. Apparently Tandy is (or did) paying Icom
for the use of the Icom design.

Or so I've heard... --Leigh/KM6JE.

4444. Daily Summary of Solar Geophysical Activity for 16 November

NOTE: The Effective Sunspot Number for 15 NOV 93 was 45.0.
The Full Kp Indices for 15 NOV 93 are: 3o 3o 2- 2- 2- 1+ 2+ 3o

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7618 (N08E22) has
continued to slowly decrease in activity yet increase in white
light appearance. The remainder of the disk is spotless.

Solar activity forecast: solar activity is expected to be
low to moderate. Region 7618 is still expected to produce at
least C-class activity with a chance for M-class activity.

STD: The latest Yohkoh x-ray image has been appended to this report. The image was taken at approximately 03:00 UTC on 16 November and clearly shows the finger-extension of the southern polar coronal hole which is expected to prove at least mildly geoeffective on 18 November.

The geomagnetic field has been at quiet to unsettled levels at middle latitudes for the past 24 hours. High latitudes have experienced some isolated active periods.

Geophysical activity forecast: the geomagnetic field is expected to be mostly unsettled on day one, active on day two due to a favorably located coronal hole, and back to mostly unsettled on day three.

Event probabilities 17 nov-19 nov

Class M 50/50/50
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 17 nov-19 nov

A. Middle Latitudes
Active 40/35/35
Minor Storm 30/25/25
Major-Severe Storm 10/10/10

B. High Latitudes
Active 35/35/30
Minor Storm 35/30/30
Major-Severe Storm 15/15/10

HF propagation conditions continued normal over all regions. Conditions are expected to become mildly degraded over transauroral and transpolar paths on 18 October due to a well-placed coronal hole. However, the disturbance should be fairly short-lived (about 24 hours) and therefore is not expected to produce any lasting impacts. Recovery should be fairly rapid and near-normal propagation should return on 19 October. Daylit paths are still at risk for periods of brief SWF activity due to minor solar flares.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>
>Is this a case where the sheriff department's nose is out of
>joint or what? Is it just an urban legend that a person can use any
>radio or frequency to summon aid in life threatening emergency? Or is it
>permissible in the FCC's eyes but not permissible to the county mounties?

The FCC specifically allows use of any means of communications in a true immediate threat to life situation (97.403), but as you noted, local police don't take such a liberal slant on such things. Some departments look at this the same way they would if you went joyriding in one of their cruisers, or used an officer's gun.

The ham made a mistake when he "admitted" using the radio illegally, since he didn't. That gave the police, who generally are not knowledgeable about radio law, the excuse to confiscate his radio. He's likely going to have to fight them in court to get it back, and he may lose because he admitted that he thought he was operating illegally and intent is a major part of the law.

Gee, by this logic I could get all sorts of people busted. As a Civil Air
Patrol member I track down signals on 121.5 and 243 (both aircraft
emergency frequencies). All sorts of things put out spurs on those
frequencies - including FAA transmitters.

>I had thought that the FCC procedure would be to contact (mail or even
>try phoning) the ham with the malfunctioning equipment, to tell him that

It should be. The FCC here wouldn't do a thing like that. They believe
in conflict resolution rather than fighting.

>Looks like the FCC guy might be in trouble for not following the correct
>procedure with the faulty repeater.
Probably not. But they guy should be able to easily get out of the fine
unless the FCC can show intent or gross negligence.

Well it wouldn't be fun if it was always easy. :) Actually the fun is
not even half over since I'm currently poor. Can't burn up $400 on a
decent 2 meter/70 cm rig at the moment, so I guess it's homebrew time.
I'm not lacking for parts in any way and have the electronics knowledge
so what the heck. :)

> Care to know some of my secrets for getting people to come back
>to me? Listen to them talk about their interests, what they do, whether
>they work on the repeater or are always putting up antennas. Then, when you
>have a question about their area of interest, give them a call! For example,

Right on, Doug! That's exactly how to do it.

>One local ham, KA0CNN, is an avid DXer, always going to antenna parties, and
>is involved with maintaining the local repeater. One day, I was soldering
>some coax connectors and just couldn't quite get it right. I heard him
>call, "KA0CNN mobile monitoring." So I came back with, "KA0CNN KA0CNN, this
>is N0YVW, do you have time to answer a quick question?" Yes, he did, he told
>me where to find the info I needed, and even offered to drop by a photocopy
>of it. I've done the same with other things--posted requests for info to the
>sunday and monday night nets and gotten answers back, come back with answers
>myself, etc. I've gotten good results. I'm still not on the "in" crowd,
>but people recognize my call and come back to me some, I come back to them
>and don't feel squeamish about it.

Sounds to me like you are doing much better than the average newcomer,
Doug.

==========

>>Gary, would you care to explain to me what is wrong with Dougs request
>>for help???

>The only thing I read into what he wrote about what's wrong with my request
>was an indictment of the system that makes you memorize all this kipple that
>can be looked up on a table for the exams (coax cable types, etc) rather than
>requiring you to learn *useful* things, such as operating procedure. Correct
>me if I'm wrong, Gary. Anyway, that can be read multiple ways, too--such as,
>"Look at what we've got when we have people willing to admit their ignorance
>so they can learn more!" :-)

Thanks, Doug. That's exactly how it was written and intended. It's the
system that's wrong, not you. Unfortunately, some of these guys have a
vivid imagination and a very itchy trigger finger. BTW, Doug, someone

said you were in NE?? Where? I'm in Scottsbluff, and you are welcome to give me a call anytime.

>purely mechanical talents such as Morse.
>

I tried to ignore this (really!) but I can't let this statement pass by unchallenged. If decoding Morse is purely mechanical then so is understanding a spoken language. When I listen to Morse I hear entire words in the same way as when I listen to someone speak. Certainly one doesn't develope this ability without many, many months (or years) of practice.

Many people, when they begin to learn a foreign language, might consider that they are undergoing a mechanical process; my first week in the Vietnamese language class I would hear: mo^.t hai ba bo^'n and have to mechanically translate mentally to English: one two three four. But after just a few weeks that mechanical process melted away to not having to do the translation into English. I heard and understood the Vietnamese.

Gary, you have undoubtedly not passed to that point where you are able to understand Morse as a language. Thus, all your posts show a dislike for it but you try to hide this dislike behind a facade that code is outdated and irrelevant. But the rest of us who are fluent know better!

See you on .policy.

Gary, someone said something nice about you a couple of posts back
and Voila! up you pop !
(do you run some form of flattery filter?)

For CW, Power amp linearity isn't all that important and light loading
is OK.

For SSB, linearity is very important. I'd recommend being a little
light on loading, just to be on the safe side for reliability. I usually
tune valve rigs for about 90-95w key down, and then on SSB throttle back
the drive to run peaks a bit lower still. It allows you to run about
70-80 W PEP with good harmonics and decent linearity. As Gary said, if
you want less power on SSB, wind back the drive control

Thanks, I missed an important point. I was trying to write how to run
a valve TX gently for beginners as a counterpoint to the usual "how to
thrash the living daylights out of your PA" approach and I left a
pitfall uncovered.

Cheers,
David GM4ZNX

There was a recent article in QST (October, I think) in the
"New Ham Companion" about new hams having problems making
contacts on repeaters. It had some suggestions on breaking
the ice. The author of that article seems to think that
many times "monitoring" calls are ignored because people in
general don't deal with meeting strangers very well. I think
it's like guys in a freshman dorm at college. They're away
from home for the first time and really need support, so they
make a lot of friends. Dealing with strangers is difficult,
but being alone is even more difficult, so they make friends.
Once folks build a base of friends, they tend to put less
energy into making new friends. They rely on their old base
of friends. I know this is a big generalization, but I
bet this is one of the reasons for repeater cliques.

I try to be sensitive to this on the local repeater. If I
hear a new call, I usually try to make contact, congratulate the guy
or girl on their new license, and make them feel like they can
give me a call if they want to chat sometime.

In terms of HF friendliness, 17m, 12m, the novice CW bands, and
30m CW are the ones I like best. However, I'd never call CQ on
14.313 :-).

> When someone comes on our repeater
>and says he's "monitoring", I usually chime in and ask if he's heard anything.
>That usually throws them for a loop. :-)

When I'm expecting to hear some friends on a (simplex) frequency, I've thrown out a "KC4WZK listening" -- if I get no results, I try again: "KC4WZK listening... but I don't hear anyone talking." That usually gets 'em.

One morning, I was feeling somewhat goofy from driving 40 miles after waking up too early, and I *almost* did a CQ rap (which I will most likely never do on the air unless I'm either completely shloshed or something :-) -- I got as far as picking up the mike when one of the guys came on.

[Hey, Gary, I finally got my Xenix system hooked in on packet. If you're interested, it's on 145.09 (you'll probably have to digipeat through SAWNEE). Connect to KC4WZK or CURLY, and log in as "guest."]

Regarding the question of etiquette in the Novice CW bands ...
it seems that we haven't determined that the ham who heard the
high-speed CW QSO actually got the call signs of the hams who
were in QSO.

It's also possible that those hams weren't even U.S. hams!
Many, many non-U.S. hams do not know that our rules set aside
certain frequencies only on a band for various license categories.
As far as I know, there aren't any other countries which do this --
they restrict you by MODE on a band (i.e. CW only), but not by
frequencies -- either you have privileges on a bnad or you don't.
I've run into this problem quite a bit when hearing some of my
overseas ham friends in the Extra part of the band where I can't work ...
I've also heard Europeans calling "CQ Stateside" in the Extra part of
the band, which cuts out the potential response of approximately
85% of all licensed amateurs.

In reference to a ham using his HT for emergency communications on police communications frequencies. First off, the sheriff department doesn't own the frequencies they use, they are licensed to use them by the Federal Government. So if these freqencies were used, then it's the Federal Government who has "suffered". Also, if you look at ALL communication acts passed by Congress, you will notice that the Federal Government has SOLE authority on ALL matters regarding radio communications. If a local or state authority attempted to regulate radio communications, they would be overstepping their authority and would be subject to both civil and criminal complaints.
Most people are thinking that "it's not worth spendintg $3000 to save a $300 radio". In business that would be true. But this isn't a business situation.
If all said is true, then the party should contact the ARRL and just about anyone else that will listen and take that bastards the Federal Court.

What is wrong with high-speed code in the Novice subband? By logical
extension, if you said that hi-speed code in the Novice subband was
bad, then novices wouldn't be able to get their code speed up, since
they'd never have the opportunity to get on the air and send/receive
code at speeds > 5wpm.

Personally, I see nothing wrong with it.

Perhaps it is the way in which you present your view-point which is offensive. I recall, Jeff, questioning in e-mail how the way in which you present your anti-gay rhetoric using the facilities of the University might come into conflict with an anti-discrimination and/or harassment policy which might be in force there. You, as I recall, pooh-poohed the notion at the time, muttering something about the First Amendment. Of course you forget the axiom that 'freedom of the press belongs to him who owns one.'

>One person has done this to me [re: BARF = Bestiality Amateur Radio
>Fraternity, which was my tongue-in-check response to the Lambda
>gay radio club {BTW, my postmaster thought the BARF article was funny}];

Though it wasn't me who went to your postmaster, you can't say I didn't warn you. Though your postmaster thought it was funny, I wonder, would the Dean? The president of the University? The mob of Queer Nation demonstrators on the steps of the Administration Building?

Your defense, and it is a flimsy one, has been that it was merely an allegory. If a racist had responded to an integrationist with a story about monkeys (sorry AT&T), and defended it as a mere allegory, s/he would have been severely censured (for the illiterate 'censured' <> 'censored').

>So, my friends, beware! There is no absolute freedom of speech on
>.misc and .policy. These folks will decide when you've crossed the line

No, your postmaster and the owners of your system will.

>[which they themselves have drawn] as to what's ``proper'' and what's not.
>[And they're doing this from their corporate accounts on company time;
>hmmm, I wonder if their employers realize this....]

If one wants wider freedoms than is afforded by utilizing the facilities of an employer whose name is, perforce, on each posting, then it behooves one to pay for the privilege.

Jeff, you clearly have some maturing to do. In your zeal to yell "he's oppressing me, he's oppressing me," you don't look at how your words

and actions contribute to the oppression of other people. Instead, you squeal like a pig when someone deals you a dose of what you deal them, and gets in the way of your self-expression.

Instead of whining, perhaps you can take a good, hard, look at what you could have done to make someone angry enough to be willing to set aside the principles of free speech, and try and shut you down. Lest you think that it is your self-styled stance for virtue and morality, that is the wrong road, sir.

TO: COLERK%snypotvx.BITNET@CUNYVM.CUNY.EDU

I had a similar problem with a Marantz 1060 amp, bought in 72. The on/off switch on that one is a silver push button style. I replaced it with a normal toggle switch, the kind with a short lever and nice round end. It really looked pretty good .. and survived longer than the original Marantz part. I guess it comes down to how 'stock' you want your 20 year old amp to look.

Gary, that's not fair. I know how to peak grids and dip plates because I use an old radio that requires such adjustments. If all you had ever been exposed to was modern stuff with broadband circuits, you wouldn't know what knobs with labels like "Plate" and "Load" did.

Besides, Doug is new. Rather than criticizing the licensing process, perhaps you might suggest how he can tune up his new radio.

I agree the idea of actually communicating this way is fascinating. Even
more so when you compare it to our modern radios.

Very, very true. I've heard of the fragmentation of HF bands in the US, but cannot quote any of the segments from memory. I do have them listed in one reference book, so I could look them up if needed, but I've no way of easily knowing if it's up to date.

I'm a British citizen, living and operating from Britain. Like US amateurs, I was only examined on my own country's licence conditions, and similarly we are each governed only by our own country's rules.

There are some big mismatches between band allocations in different regions. Our 40m band is only 7.0 - 7.1 MHz. The US allocation extends higher, but is governed by compulsory band plans, giving little overlap of SSB allocation for some US licence classes with Europe. Our bandplans are voluntary, only. They work reasonably well, and sometimes the freedom to breach them is useful, but we cannot go into some of the US segments on 40 and 80 as they are outside our bands.

One amusing consequence is that a lot of space shuttle operation was planned based on the US 2 metre band, and used even over other countries. It meant that they were outside the bandplans of the only countries they were in range of, and sometimes on such congested frequencies that they were not noticed for local traffic.

****
I think there is a market for a set of HF band diagrams showing who can operate where, across the world. This would help everyone find everyone else
****

Cheers
David

Good Deal!! Glad to see some OM out there that are willing to send a little slower for the newbies! I have had my first four or five CW contacts in the past few weeks, and it can be very nerve racking. There was one instance where the guy I was working was sending somewhere around 15-20wpm. I told him to slow down 3 or 4 times before finally signing with him (needless to say, he never slowed down even a tiny bit). Not much fun to work someone that you don't know what they're saying. Kinda like talking to a foreigner who can understand you but can't speak your language.

Anyway just my $0.02 worth.

Keep up the good work Jeff!

> The collapsed telescoping antenna won't be any worse than a duck.

Yes it will. It has a much worse SWR. It just doesn't work as well.
Try it side-by-side with a weak signal. Whether or not the high SWR
will hurt your rig is a different issue.

> By the way, I'm extremely happy with my AEA Hotrod antenna on my HT.

Me too, although after three years of heavy use it shows some signs of
abuse... Less than straight spots, and it was intermittent until I took
it apart and sort of tightened it up.

For what it's worth... For over a decade I've used what has to be the most efficient and least ambiguous way of representing "timestamps" as text:

CCYYMMDD.HHMMSS

You can leave off any parts that are not needed due to context. For example:

931117 (today)
931117.1027 (now)
19931117 (for more clarity; seldom required)
1117.23 (about 11pm today)
121523 (a time today; seldom used, must be clear in context)

I find that YYMMDD is generally recognized because of it starting with the year. If necessary I can "key" a document with "YYMMDD" or "YYMMDD.HHMMSS" to explain the date notation used.

In article <2cc7aa$qp8@usenet.INS.CWRU.Edu> trier@odin.ins.cwru.edu (Stephen C. Trier) writes:

OK, two different threads have touched on this, so I guess I'll ask the question: How does one zero-beat a CW signal?

There are some assumptions here (including one that asserts I know what I'm talking about), but what it means to me is this...

Presumably your tranceiver has a mode in which you don't transmit if you hit the key, but you do get sidetone in your speaker. On my two Yaesu's, a modern rig and an older FT-101, this is just CW mode with the VOX and MOX switched off. Now tune the radio while playing a string of dits with your paddle (or while leaning on your straight key). Tune the received signal so its pitch matches the sidetone exactly (zero-beat - if you're off by one hz you'll hear a beat per second, for instance).

The key assumption here is that the pitch (frequency) of your sidetone exactly matches the offset between your receiving frequency and transmitting frequency or BFO frequency or whatever, in CW mode. I don't know how valid this is for other (and older) rigs.

Hope this helped and is reasonably clear.

Pat,

I have a 12 year old Corsair and I got rid of a new TS-440sat a couple years ago because there was simply no comparison in the receiver quality.

Those guys probably never even seen a Ten Tec, and I bet you a steak dinner, when their Kenwood, Icom, or Yasue breaks, it gets shipped out for repair.

Look, everyone makes a pretty good radio for any given "x" amount of dollars. The Omni V has a superlative receiver but few of the bells and whistles (including general coverage) that virtually every other manufacturer builds in as standard equipment.

Joseph KA3VJY,

Be careful of what you ask for. You might get what you ask for. :-)

The following is a part of the Phillips Code, a standard set of
abbreviations used by Morse Operators, Telegraphers, Ham Radio Operators,
etc. I have added some. Thus the Phillips-Adams Code, but not included
in this list is every abbreviation known to man, no acronyms, common ham,
abbreviations, etc.....

This will take some time to memorize, but you will hear some of them on the air.
Also, as a side note, the faster you go, the fewer abbreviations you will
here and spelling becomes very important. :-) Enjoy.

Flame suit on Scotty. CW Bashing mode on. Internet go.

How can two stations having a QSO be rude? It sounds like they were carrying on a QSO without interferring with anyone else. They were within the rules and regs set down by the FCC. I didn't hear anyone mention League Affiliation, Names of Gary, or sexual preference or whether the battery (if they had one) was on concrete with or without the little red wagon. :-)

I get in the novice bands and I slow down to 10 wpm. Was I going too fast? I figured I was doing my part to help someone come up to speed for the General AND higher classes of license. Was I wrong?

Like others have mentioned. There are some people who operated in foreign wars and peace keeping efforts who were morse intercept operators and capable of doing more than 50 wpm. They become novices, but they sure don't want to slow down to 5 wpm, if the other person can keep up 20 or more wpm. EOT dit dit

>I'm assuming you couldn't copy their calls Doug, so I'm asking this
>as a retorical question. Are you sure they *weren't* Novices? Some
>people have a natural talent for high speed Morse, and little interest

Another possibilty is that the were novices doing high speed code electronically with computers. Novices can't operate the digital modes except on 10 meters and up, limited to only cw on 80/40/15. But there is nothing that says they can't use the same computer/hardware they would use on rtty on 10 to do automated cw on 80 if that band suits their need. Automated cw usually is poor on a human fist, but I had a very nice 40 wpm cw contact with 99 percent copy the other night keyboard to keyboard (below the novice band, we were both general and up). I've recommended this mode to novices out of our classes who were mostly interested in computers and stuff. With good modems FSK has real advantages, but for a lot of the cheapie modems there doesn't seem to be a whole lot of difference in the performace between auto cw and rtty (the arq modes like amtor/pactor are clearly better). 40 wpm is about as fast as I can type, and the duty cycle is a little easier on the rig than full keydown rtty. At 50 wpm, my rig starts to lose it, it slurs the dots! :-)
□
For a pair of hams living far enough apart to need HF propagation to communicate, and who don't have the skills currently to do fast cw, computer augmented cw (ooooh, a new buzzword! :-) would give them good capabilty to keep in touch. MIght abort their fledgling cw skills, might help them along. But it would work.

73 de Kevin (who likes cw either way, and most any other mode to boot)

>interested, however, in the general procedure applicable to most rigs.
>
> Stephen

There has already been a follow-up with which I concur, so I won't repeat it here. Just wanted to add that I happen to have an 830 and that you want to have the MONITOR button pushed in so that you hear the sidetone and the VOX switched off so that you don't transmit. Then key down and tune to match the pitch of the received signal to the sidetone.

On my dad's TS-850S, one of its several hundred buttons functions to assist in zero-beating by allowing you to tune till the received signal drops out. This makes the task a little simpler.

Personally, I usually operate CW with the narrow filter kicked in so that I'm not far off the other signal to begin with. Then I click back the VBT to narrow the passband a bit and re-tune if necessary. If I can still hear the other signal, I figure I'm close enough.

4492. Using modified HT in emergency

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-17 20:19:31 UTC
From: sberman@robins.af.mil
Message-ID: <2ce10j$l20@wrdis02.robins.af.mil>
Source record: 274114

If what the injured party said is true, and the original ham was persecuted for his good samaritanism, I don't know what this country is coming to.

From what I understand (it's on Element 1A, for G-d sake!) in an emergency, when you have health and safety traffic (time-value traffic, call it what you will), you can use ANY MEANS at your disposal to get help. If there was a police car there and you used his radio, would they arrest you? It is NOT illegal for hams to possess modified HT's. There was a long thread recently in this newsgroup about using portable scanners...same thing, as long as you don't transmit on an unauthorized frequency.

In the future, if I find myself in a similar situation, I'll do the same thing as our good sam friend did...except I'll remember to be hysterical, call on the 911 dispatch frequency, and NOT use my callsign. Maybe I'll even make it on "Rescue 911" for my heroics. (place any number of ;-) here).

Seriously, though, nobody should be persecuted for using whatever means are at his/her disposal to get help in what THAT PERSON considers an emergency. If it were me, and the FCC/Sheriff asked me to turn over my HT, I'd say "not NO but HELL NO."

Just my .02.

If anyone is desperate, I have a photo-copied service manual of the FT727, as well as the small user booklet. Drop me an E-mail if you can't get hold of it in your country.

Just dug into mine last night in an attempt to speed up the PLL switching to tx. Am using it on packet (2400 bps), the PLL takes about 250 ms to lock on the tx freq, and the modulation takes even longer to trickle through. Running it with a txdelay of 600 ms (!) on the local data repeater.

Also, the Squelch is very slow to come off, and I keep losing the first part of the first frame received. Conclusion: a nice dual band radio, but no good for packet...

Wilbert, ZL2BSJ.

I have an OMNI VI, so the bells and whistles comment doesn't apply (it has them), but the receiver comment does. I bought it for the receiver quality. When I want to listen to shortwave broadcasts, I'll buy a shortwave receiver.

4495. How useful are DSP units in noisy locations?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-17 21:18:07 UTC
From: DAVID@medcor.mcgill.ca
Message-ID: <1993Nov17.211807.12826@sifon.cc.mcgill.ca>
Source record: 274119

There has been some discussion recently concerning add-on DSP units to process recieve audio, and some complimentary comments on their use, particularly for copying cw. I've never heard one of these devices in use, and wonder if they are effective at helping to cope with the high levels of electrical noise (tv sweep, electric motors etc) which I hear on hf in my downtown apartment location. Might there be benefits in adding one of these devices when my rig already has a 500Hz cw filter? The claims in some of the advertising for commercial DSP units sound pretty fanciful to me. Can anyone point me towards any good magazine articles or books which mention DSP in ham radio - a quick glance through the '93 ARRL handbook didn't reveal anything very useful. Are there any good construction articles out there?

I have been asked by someone without access to internet to post this.
A recently acquired 2 mtr all mode Icom 290A does not have an internal
back up memory circuit. Unfortunately we also do not have a schemetic.
Has anyone installed memory backup ? Apparantly it was always meant to
have a live 13.8 v line connected. Or can anyone provide the memory
voltage and the ic pin number where this should be provided (with
appropriate diodes, of course).

Please reply to me : dara@physics.att.com

Message-ID: <pvh-171193133944@petehelme.apple.com>
Source record: 274121

I turned on my TH-78 last night to find it dead. There was a brief moment of the entire LCD panel coming on and then nothing. Subsequent attempts at turning on the power only would bring up brief displays of the tiny timer icon in the bottom right hand corner, is says "OFF".

Since I hand't charged the thing in quite a while I suspected the battery. I went out and bought a new PB-13 battery at HRO this morning, but it needs to charge before it'll do anything. Though I connected it to the cigarette lighter charger/adaptor on the way home thinking it should work with full power, but now nothing happens.

Does anyone have idea what's wrong? Is it dead?

Source record: 274122
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc

Now that the Radio Shack frequency counter has been out for a few months, how do people like them? I know that it lacks a hold button, but I recently saw a mod for that. I plan on putting it on my xmas list that my wife insists on, and this counter is tempting because of the price, 10% discount coupon, availability and LCD display. Some of the other brands may be more sensitive, but they are also more expensive and most have LED displays that are hard on batteries and difficult to read in sunshine. Do those who have them like them? Thanks...

BTW - My use of it would be for determining scanner frequencies, finding interference sources and general amateur use.

From: levin@bbn.com
Message-ID: <LEVIN.93Nov17175846@powell.bbn.com>
Source record: 274125

In article <2cbjpn$rgu@kelly.teleport.com> genew@teleport.com (Gene Wolford) writes:

My experience, for what it's worth...

Times do seem to be growing shorter.

The local VE's sent the paperwork out on the May 17th, (overnight mail).
ARRL, (Association for Retarding Radio Licensing 8-)), sent it to the
FCC on or about June 6. That's about 18 days. In any case, it was somewhere
other than at the FCC from May 17 and June 6 or 7. I talked the the folks at
ARRL and they were quite nice and helpful. They said that May is a heavy
test month and that they are understaffed.
W5YI claims they complete the process in 1 day.

Three members of a (now) 4 ham family I know took their tests over the
summer several weeks apart. The licenses came in at progressively
shorter intervals. These were all ARRL VE sessions I believe, too
(certainly the last one was, I worked it).

Here's another data point. While the licensing times were getting
shorter, the ARRL New England VE convention session processed 124
candidates who took 211 test elements (and got lots of upgrades and
new licenses, but I forget how many). [We were told that in
comparison, Dayton had 96 candidates in two days.] This was on
Saturday. By Tuesday morning the VEs had finished all the paperwork
and overnight-shipped the materials to the ARRL VEC, all in one lump.

The waiting times did not increase.

Of course, W5YI isn't busy dealing with critical stuff like:

Wanked all Unincorporated Areas
Wanked All Cities
etc.

Because of the rules for establishment of a VEC, the ARRL VEC is
fairly separate from ARRL itself and operates independently. In other
words, the contest and awards people have nothing to do with the VEC
activities.

I don't mean to disparage contesting or the time honored
"Worked All ____" aspect of amateur radio, but if bringing new hams
on line is as important as everyone says, shouldn't that have priority?

And they do a lot, in the more important arena of getting new people
interested and helping them prepare - see the books, brochures, and
instructional materials they make available, for instance.

>other "Free" advertising seems to have a very short persistance in most
>folks homes, often landing in the trash the same day it's received.

A catalog is a form of advertising. Its purpose is to make people
aware of your products and boost sales. If you make people
pay for it, far fewer people will have one. That defeats its
purpose. Tandy might as well start making people pay for the monthly
sales flyers instead of asking us for our address, so they
can send it to us.

The environmental argument doesn't hold water. If Tandy cared
about the environment, they wouldn't send the flyers or put flyers
in newspapers. These really end up in the trash. The catalog
was at least someting you had to ask for. I still have several lying
around.

I refuse to pay for a catalog because I refuse to pay for
Tandy's (or anyone else's) advertising.

Source record: 273930

It seems some areas of the country are vastly different from others. I never will forget the day my license arrived in the mail. I rushed in the house, grabbed the HT and said, "KE4DPX monitoring." Within moments so many people were on the air congratulating me and giving good advice that I had a hard time keeping track. Thank goodness I had been monitoring for several months and followed the best advice I've yet heard -- KEEP A LOG! :-) While I realize that logs aren't officially required these days, they really do help keep track of who's who -- especially when more than three or four people are in a roundtable. It's also more than just records of names and calls scratched on paper -- it's a piece of your life. Even in the short time I've been on the air, I get a lump in my throat when reviewing the log. . . stirring memories of memorable conversations with old friends and old timers. There's not a day that goes by that I don't learn something new from the friendly voices "out there somewhere" and so many invitations to go visit shacks that I'll never get the time to visit them all. But with so many willing to lend a helping hand, a quick course on amateur gear and theory, and recommendations for equipment I'll never be able to repay them all.

trier@odin.ins.cwru.edu (Stephen C. Trier) asks:

>OK, two different threads have touched on this, so I guess I'll ask the
>question: How does one zero-beat a CW signal?

>The radio in this case is, I believe, a Kenwood TS-830. I'm most
>interested, however, in the general procedure applicable to most rigs.

I thought I had answered this before, but perhaps nobody believed
me. Tune to WWV, set your transceiver to the known WWV frequency
(10.000 or whatever) and note the pitch of the signal you hear.
Then when you hear a CW signal, tune the transceiver so that the
CW signal has this same pitch and you are on frequency.

On the TS-830S, and many other rigs, the sidetone is at this pitch.
If you are desperate and don't have perfect pitch or a sidetone, use
a tuning fork or a bell or something.

The other way is to call CQ a lot and average the pitch of all the
replies you get. This assumes that other people know how to zero-
beat, or at least that they don't all call consistently high or low.
I don't recommend this approach.

State agents, such as the U. of Hawaii, are not allowed to regulate
speech based on its tone. A short quote from _Cohen v. California_:

"We cannot sanction the view that the constitution, while
solicitous of the cognitive content of individual speech, has
little or no regard for that emotive function which, practically
speaking, may often be the more important element of the overall
message sought to be communicated."

See the referenced "censorship-v-harassment" for more on the difference.

[...]
> Of course you forget the axiom that 'freedom of the press belongs to
> him who owns one.'
[...]

Like any organization, U. of Hawaii must work within its charters,
including the U.S. Constitution. The U.S. Supreme Court has said that
this limits the its authority to control the media that owns and
controls. The rationale is that it would be dangerous for a
Government that is elected by the people to have too much control on
what the people can say and read.

See the referenced "media.control" for more details.

Buffalo's set comprises, of probably 95% of what's out there in terms
of ftp sites and automated mailers. I am the person one who
collected, and weeded out this collection in particular. There are
over 250 at the present time.

I'm moving in the very near future, but once I've settled down again,
WIBNI we could come to some sort of agreement on having THE mod site
somewhere, so people don't have to go all over creation to find what
they need.

I just wanted to point out one *little* detail you all
seem to be missing:

Using any means available does not mean you can make the
"means" available to you at all times!

The "radio friend" in this thread did exactally as I or
anyone else would have under the circumstances, but
it doesnt make it legal to have the modified radio in the
first place.

If this were to go to court, the amateur would *probably*
be found innocent of unlawful transmission, and get hung
out to dry on the illegal radio.

I suspect it's because we're so used to seeing GC's posts end with a lone

Gary

at the bottom. Usually, it's fairly distinctive, but in this case, the
other Gary 'signed' the same way, and we all, Pavlovian-like, assumed it
was GC.

: >It wasn't anything big tonight, since even that area was uncrowded, but I'm
: >just curious...the novice subbands are supposedly "training bands" (anything
: >like training pants or training wheels? ;-) ;-) ;-) <- for the humour-impaired)
: >for lowly Novices/Techs like me. If there's a big demand for them by novices/
: >techs, should higher-class licenses QSY? *do* they QSY?

: I'm assuming you couldn't copy their calls Doug, so I'm asking this
: as a retorical question. Are you sure they *weren't* Novices? Some
: people have a natural talent for high speed Morse, and little interest
: in other aspects of amateur radio. I've known some Novices who could
: bat along at really outrageous code speeds, but had no interest, or
: in some cases professed no ability, to learn the technical material
: required to upgrade their license class. Thus they were "stuck" in
: the Novice segments. This so called idiot savant talent is rare, but
: not so rare that you don't run across it ocasionally, especially with
: purely mechanical talents such as Morse.

: On the other hand, if neither of the stations were Novice, or coded Tech,
: licensees, then the behavior *was* somewhat rude.

I wouldn't say that. As a tech+ for a few months, I've spent all of
my time running QRP-CW on 40 meters. It's all well and fine to crank
along at 5-10WPM, but I'm MUCH more interested in having QSO's with
higher-speed operators who push my limits and help me to increase my
speed. Since I'm currently limited to the Novice bands, I find myself
somewhat thankful for the 20wpm operators who actually take the time to
help me, instead of letting me copy the mistakes of other newbies like
myself. :-)

NOTE: The Effective Sunspot Number for 16 NOV 93 was 44.0.
The Full Kp Indices for 16 NOV 93 are: 3- 2o 3- 3- 2o 2o 1o 2-

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7618 (N09E07) has
shown some white light growth since yesterday, but overall this
region has remained relatively stable. The remainder of the
disk is spotless.

Solar activity forecast: solar activity is expected to be
low to moderate. Region 7618 is expected to produce C-class
and isolated M-class activity.

The geomagnetic field has been at mostly quiet levels for the
past 24 hours.

Geophysical activity forecast: for day one, the
geomagnetic field is expected to be at mostly active levels in
response to a favorably located coronal hole. The field on
days two and three is expected to be at mostly unsettled
levels.

Event probabilities 18 nov-20 nov

Class M 50/50/50
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 18 nov-20 nov

A. Middle Latitudes
Active 30/30/10
Minor Storm 25/25/05
Major-Severe Storm 10/10/01

B. High Latitudes
Active 45/35/20
Minor Storm 20/15/05
Major-Severe Storm 10/10/01

HF propagation conditions were normal over all regions.
Minor deterioration of signal qualities for transpolar and
transauroral circuits is expected over the next 24 to 48 hours
with greatest instabilities expected during the local night and
sunrise sectors. Middle and low latitude paths should remain
near-normal with possibly only slightly increased levels of
night-sector fading and multipathing over the higher latitude
paths. Conditions should return to near-normal over all
regions by 20 November.

What the article failed to mention was that shortly thereafter,
another individual did a similar contact to the SO. However,
this was done on a primary channel, with no emergency pending,
and without the professionalism of the hapless ham. The SO was
miffed (rightfully) and actively began the effort to hammer the
latter. It was then that the former's situation came to light
officially. Well, it was a much too similar situation and
occurred too close (in time). So, the hammer fell on both.

I could easily be in the same position some day. I have the SO
freqs in my Ham HT, I use SO radios and work, and have a call
sign for the SO to boot. I would do the same thing if placed
into a similar position as this helpful ham. I would hope to not
have another idiot come along to gum up the works if I were
compelled to perform in a similar circumstance.

They knew well of HAM radio. The SO sponsors RACES locally and
has a number of key sworn deputies who are hams. Unfortunately,
timing of events coupled with his full cooperation, worked
against him. Naturally, not everyone in the SO were pleased with
the way this ham was treated.

>

He "voluntarily" gave up his radio to the SO. I think that the
in the other incident, that guy had his tranceiver confiscated
and was to pay a fine or that the FCC action was pending. Not
sure about this but I know that more severe action was taken on
the second incident. Again, timing was a key ingredient.

Many mods are available. You can extend rx to 950mhz including cellular. You will also be able to go down to the aircraft band. It is an easy task of soldering 1 pad to get extended rx and xmit or two to get rx only. I say easy but actually if you do not have VERY good eyes and a magnifying glas it is quite a job. If you don't do it yourself they are charging over 100 to do it at hmafest so think about this. It is a ripoff but it does save you from destroying your radio.

Hi all. I just wanted you all to know that 2 of my radios were stolen. If you see them, give me a call at (614)341-0050. This is my pager; just enter your number at the prompt (with area code, please). Here is what was stolen:
Icom 24AT S/N 12176
Icom 2AT S/N 91971
Polaris Speaker/Mic, White WITH ADDED SWITCH ON BACK (small,red/grey slide)
A lot of other stuff went with this stuff, but none of it is IDable. (Would you believe they got my jump kit, stethoscope, and a lot of other non-marketable stuff?) Geez...
Thanks folks.

OK, so he got help for his injured friend at the cost to him of an HT.
He buys another HT (or his friend buys him one), modifies it for OOB
operation, and life goes on. Sounds like a fair solution...

>a dislike for it but you try to hide this dislike behind a facade
>that code is outdated and irrelevant. But the rest of us who are
>fluent know better!

Ah, the old Morse is a language chestnut appears again. If Morse is a language, then so are ASCII and Baudot. All three are encodings of alphanumeric characters. In fact I can read ASCII or Baudot off of paper tape just as if they were regular alphabetic characters. That doesn't make either a language, any more than printed letters on a page are language. It's what they *spell* that can be language. They can also spell nonsense groups which isn't language either. Only when a structured grammar of nouns, verbs, and modifiers is assembled do we have something called language.

Now as to the mechcanical nature of decoding Morse encodings, in a skilled operator the process is a pure conditioned reflex brought on by extensive operant conditioning of pattern recognizing neural nets in the brain. This is a purely mechanistic process, no intelligence is required to intervene in the decoding process. To understand the English, or other, natural *language* spelled by the Morse encodings does require more general purpose pattern recognition and association processes in the brain that aren't reflexive. Instead they require conscious intervention to bring comprehension to the process.

This is similar to touch typing. The process of translating words
to finger motions is a pure mechanistic result of operant conditioning.
I just think what I want to say and the mechanism puts it on the
screen without conscious intervention. It's a pure mechanism, just
like manual Morse.

A similar process occurs with spoken natural language. Humans come
wired from the factory with the ability to detect and decode certain
sound patterns called phonomes. A very young child's babbling is almost
pure phonome generation with no coordination into natural language
constructs. It's a mechanistic process without intelligent guidance.
The intelligence comes into play in stringing together the phonomes,
similar in concept to Morse characters, into coherent natural language
constructs.

People are sometimes confused about the language status of Morse
because they decode it's elements in much the same way as the
phonetic elements of spoken language are decoded. But that's a
fundamental confusion of mechanisms with content. Language isn't
mechanism, it's the structured content represented by the mechanistic
elements. If we were still decoding Morse by sight, as Samuel Morse
intended it to be decoded, this confusion wouldn't be so prevalent.
Few people confuse the marks we make on paper, and electronic screens,
called alphabet, with language. That's because we had to consciously
acquire the conversion mechanisms through the visual mechanism rather
than develop them unconsciously from birth via the aural mechanism.
The visual pattern recognition mechanisms are about 10,000 times more
complex and capable than the aural mechanisms, which is why new patterns
are easier to learn in a visual medium than in the aural domain.

Geeze, read what I said. The Novice/Tech segments are small, and they're
all that Novices and Techs get. It is rude for Extra, Advanced, or General
stations to use those frequencies for contacts with *other than Novices
or Techs* when they have a much larger band of frequencies to choose for
their contact. What I'm saying is that it's polite to *give the Novices
and Techs a break* by not carrying on Extra-Extra contacts in the little
slices available to the Novice/Tech classes.

Sure, absolutely, that's what I said. Read it again. If *neither*
party were Novice/Tech+ then I think it's rude for them to occupy
the tiny band segment allocated to N/T when they have plenty of
alternative space available. However, if *either* of the parties
were N/T, then they were obviously in the right place since the
N/T *couldn't* operate anywhere else. It's great when experienced
hams go to the N/T segments to give a contact to N/Ts, what's not
so great is when they go there and chat with non-N/Ts and tie up
the limited spectrum available to N/Ts.

>will hurt your rig is a different issue.

Maybe I should not have said "won't". I should have said "might not".
In my case, the duck that came sith my Alinco DJ560 is roughly equal to
worse than my AEA telescopic antenna collapsed. Your milage may vary.
About the only time I use the duck is if I am in a strong signal area
and need an attenuator.

David

: This is the ISO standard date format, too bad more people don't use it.
: It's unambigous and sorts nicely too.
: --GaryM

This, and variations leaving out the "-" and "19", are the only
reasonable choices, because:

1. For the next 6 years most people unfamiliar with the notation will
still interpret it correctly.
2. It sorts nicely.
3. As I just learned, it is the ISO standard.

Using the three letter month field does not lend itself to sorting and
is language dependent.

Congrats to you both! :-) I passed mine at 14, and my father had one
suggestion I'm glad I took; laminate the original license in plastic
(preferably have a jiffy-print or like company do it for you) so you'll
have it forever. Not only is it a nice keepsake, but it also provides
proof of licensing when, at age 38, he wants to join the Old Farts' Club.

Why such an tasteless stab at the ARRL? As a new ham, maybe you
haven't had to use such serives as the QSL Bureau, the DXCC
Desk, the Amateur Auxilliary, Field Day, etc.... that the ARRL
provides. Lighten up.

You may disagree with the league's position on a few issues,
but no one can say that they dont provide many many
valuable services to the Ham community.

What is meant by "retarded radio licensing" anyway?

4528. Re: How useful are DSP units in noisy locations?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-18 15:42:55 UTC
From: dearnshaw@worldbank.org
Message-ID: <1993Nov18.154255.23136@worldbank.org>
Source record: 273958

Dave,

The reason that we bought a DSP unit for the club station was to address the issue of an electrically noisy environment. (The club shack is located on the top floor of a tall office building in the center of Washington D.C., about a block from the White House - so it's very noise; RF and QRN.) In some cases, we've found that the DSP unit (NIR-10) can reduce some of the noise, however it does not make a significant difference. If there is a weak station in the noise, we can sometimes make enhance it by "playing" with the controls; however, sometimes the noise can fool the unit, and the result can be a less-intelligble signal! It works okay on strong signals - but then they're usually not a problem.

Unfortunately, a lot of the radio communication that we deal with are pile-ups (because of our call: 4U1WB), and for this, the unit is virtually useless.

Having said this... Most of the posts on this newsgroup that refer to the NIR-10 don't give it a good write up. I haven't any experience with other units, but the Timestep seems to be favoured among other members of the newsgroup.

Good Luck, Darrell (NR3Y)

4529. XY0Z - DXCC Status

You are implying that it is illegal to have a radio modified to transmit on unauthorized frequencies. Show me the law that says that.

|>
|> If this were to go to court, the amateur would *probably*
|> be found innocent of unlawful transmission, and get hung
|> out to dry on the illegal radio.

What makes it an illegal radio? It is like owning a licensed handgun. If you kill someone in self defense it is OK, but if you murder someone it is not - owning the handgun is not illegal, nor is a modified radio (yet).

I am willing to bet that the FCC will soon ban the manufacture or import (or even sale) of radios capable of being easily modified to transmit out of band. In some ways, I can understand how modified radios can cause problems if in the wrong hands. On the other hand, I hope that they don't start telling us that we cannot own such a radio...

I did indeed say said that the bells & whistles part of the OMNI VI doesn't apply to the discussion, Paul. But the receiver quality between the V and the VI is basically the same -- DSP has nothing to do with that. The point is that the OMNI V (and VI) are some of the best basic receiver designs around, IF you can satisfy your SW needs with the Sony.

From: ajs@hpfcso.FC.HP.COM
Message-ID: <103360208@hpfcso.FC.HP.COM>
Source record: 274030

> I hope this information is useful.

It is certainly one (sobering) data point.

> Does anyone have any comments?

1. I doubt the sheriff had the authority to confiscate the modified HT.
Probably the FCC could levy such a penalty, but not the sheriff.
Personally I would have asked the sheriff to show me the chapter and
verse authorizing him to confiscate, or for that matter even to
arrest someone for use of a radio on his band. I think he was out
of his jurisdiction on both points.

2. It is legal to modify a radio. It is only the out-of-band use of it
that might be illegal, and then only for transmission (except for
listening on cellular phone freqs). Again, confiscating the HT
seems inappropriate.

3. Has your friend considered making a stink to the media?

4. In an apparent emergency, time matters and it is reasonable to be
conservative -- better to declare a false emergency than to ignore a
real one. Besides, it's a good drill for rescuers. I would have
done the same thing. That's why I carry the radio and why it is
capable of going out of band. In Death Valley National Monument,
for example, the rangers told me their freqs when I explained my
situation (solo hiking) and requested to know them. (It is a bit
unnerving that I can't legally test my ability to reach them, but
so it goes.)

5. Two things I already decided I will do, should the need arise to
transmit out of band in an emergency:

a. State clearly that I'm out of band because it is an emergency
and I have no other reasonable options.

b. Ask "Is it OK if I proceed," or something like that. I know the
dispatcher or whoever is not authorized to grant me operating
privileges, but it couldn't hurt to demonstrate awareness that I
might be causing a problem, and that the other party was willing
to continue.

4536. WARNING: Potential Satellite Anomaly Warning

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-18 17:17:04 UTC
From: oler@rho.uleth.ca
Message-ID: <9311181717.AA06943@rho.uleth.ca>
Source record: 274039
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

/\

POTENTIAL SATELLITE ANOMALY WARNING

ISSUED: 16:30 UT, 18 NOVEMBER

/\

The following report is experimental. We would like to solicit
comments on the usefulness of satellite anomaly warning reports
(specifically warning of geosynchronous magnetopause crossings).

ATTENTION:

A sudden magnetic impulse of 16 nT marked the arrival of a disturbance
at 12:11 UTC on 18 November. The field at geosynchronous altitudes was
jolted by approximately 22 nT, afterwhich generally active geomagnetic
conditions prevailed. However, magnetospheric ram pressure has increased
over the last hour and is resulting in sufficient magnetospheric compression
to produce magnetopause crossings by geosynchronous satellites. Both GOES-6
and GOES-7 have penetrated the magnetopause and are still within the
magnetosheath as of 16:30 UTC.

Geosynchronous satellites may suffer additional magnetopause crossings
over the next 12 hours.

** End of Warning **

I think that "beating up" on the ARRL has been the "in thing" to do for
people who think of themselves as brilliant. The phenomena reminds me a
lot of the 60s on campus when the truly "in" all vocally support the new left.
I have to say that a lot of them knew little about that movement, its purpose
or its aims. Nevertheless, the chique just had to lend their voices.

The anti-league group in an analogous manner looks at itself as elitist and
truly understanding ham needs (unlike the league in their opinion). This
diverse group of iconoclasts has established the importance of blind
opposition as important to the salvation of the USA (ala Wayne Green) and
hamdom. Newcomers who want to belong often parrot these anti-league
statements never having really taken advantage of all the services that the
league offers.

Its a shame really. We need the league to be stronger now than ever. Of course,
I am not advocating that that means no criticism. We owe the league
CONSTRUCTIVE criticism and suggestions. Those who feel that they have a

better way should take a greater part in the league not eschew it. Mindless rebellion is not required for a successful democracy. Total rejection based on the fact that the league does not agree with all of ones personal views, is also not very productive. Invovlement is the key!

IMHO

4540. Need Ideas on FSK demodulation

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-18 17:55:49 UTC
From: mebly@eng.umd.edu
Message-ID: <2cgcv5$rvv@mojo.eng.umd.edu>
Source record: 273966

I have an interesting problem. I want to demodulate a signal with
one of three different tones. The requirements are:

1) I need to set the frequency of each tone under software control
2) The input is an audio signal consisting of one of three tones.
There is no clock signal available. I have to set the clock
frequency under software control. There is no encoding of the
three tones to ensure a transition each clock period.
3) The solution needs to talk to a VME chassis.

I've thought about buying a general-purpose DSP VME board of some kind and
learning enough about digital signal processing to do a fourier transform
of the input audio signal. This would be oversampled and averaged to
determine which tone was on. Synchronizing to the unknown clock would be
done by software.

Is there a better way? (I'm betting that there is. :-))

Thanks for any assistance y'all can provide.

I'm working with an engineer on a DSP project called the Ham
Blaster. It's a DSP board that plugs into a PC. I was using
it to copy H.F. packet. The program that I was running was
able to copy packet even when the computer that I was using
interfered with the radio. The packets came through with
no noise. It also hac a C.W. program that provides the same
filtering.

I took my no-code tech exam on October 16. From recent posts on this board, I understand the FCC has drastically reduced their turnaround time to 4 or 5 weeks.

Any new Hams from WA state that can tell me when they took test and when they received ticket to validate this information.

Thanks.

Ted

Clark-

To the best of my recollection, the TU-8 data sheet had almost no
information. The information about installation and DIP-switch settings,
was in my TS-450/690 user manual, under installation of options. I assume
it would also be in the manuals of the other radios that use a TU-8.

Sign me up. I will also offer to schedule CW QSOs with anyone who wants
to practice. I have a Morse Machine keyer and it can be set exactly to any desired speed. I remember when I got my Novice license I was so nervous
my first few contacts my hand was shaking.

I am located in Cambridge, MA. Call is KE0SH.

From: ket@twobeers.EBay.Sun.COM
Message-ID: <2cgjl6$s4r@male.EBay.Sun.COM>
Source record: 273974

I am looking for info from anyone who has installed a VHF/UHF radio in a Ford SHO Taurus. I recently purchased one and I would like to install a radio in it but I have been reading about some manufacturers not recommending this. My manual for the Taurus is kind of vague on the subject of RF equipment and mostly concerned with Cel-Phone stuff.

Basicly I need to know if it has been done and if so how did it work(every thing functioning normally at full power) or not(did the car suddenly explode in flames when the transmitter is keyed).

Thanks
Keith

Well, I got my no-code license in the mail the same day I passed my 5WPM
code exam. There are two things holding me up from my first contact
(which will be via code &^))

1) I need to tune an antenna up

2) Even more important than the first, I need to finish my
MS Thesis &^)

But I will get there from here !!!

4553. HT vs Mobile & Alinco DR-1200T

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-18 22:08:41 UTC
From: cuti@jumbo.Read.TASC.COM
Message-ID: <9311182208.AA29836@jumbo.Read.TASC.COM>
Source record: 273977

Hi,

I recently passed my tech exam and I am currently waiting for my ticket to arrive. Like many newcomers, the question of what first rig to buy weighs heavily on my mind. From a number of postings on the internet, HTs seems to be a lot of new tech's first rigs (2M or 2M/440). I would like to be able to use this rig as a mobile and a base using an external antenna and get into some packet radio as well. I would also like to keep the $$ on the low side to begin with, if possible, since I prefer to buy new rather than used.

From the postings I've read, it seems a HT can be used for packet but is not particularly well suited due to intermod problems using external antennas and due to hidden node problems because of its low power. Likewise, for mobile and base use, possible problems with intermod exist when used with external antennas.

A HAM I know suggested that maybe I should start with a simple 2M mobile rig. He also mentioned that since I am interested in packet that I might look into the Alinco DR-1200T packet radio (and get the optional microphone for phone use).

Now the questions:

1) Is what I've stated in paragraph #2 a correct distillation of the issues?

2) Does a 2M mobile rig seem to be a better first rig for my requirements than using a HT?

3) Does anyone have any experience with the Alinco DR-1200T for packet use as well as for mobile/base phone use? For the price, what is the DR-1200T missing for phone use compared to other similar or more expensive 2M mobile rigs? Why is it particularly well suited for packet radio?

4) Any other rig suggestions?

All advice, comments and criticisms welcome. Thanks in advance.

>band. In some ways, I can understand how modified radios can cause problems
>if in the wrong hands. On the other hand, I hope that they don't start
>telling us that we cannot own such a radio...

It will be a real shame if this happens. Most ham equipment must be modified to transmit across the entire 420-450 UHF band anyway... defeating the ability to make it work at 460 will probably mean I can't make it work at 420, which is a legal place to operate...

This sounds like an over-reaction on the part of the local Sheriff's Office to me... Too bad, since someone was helped by the so-called "illegal" operating. I'm just glad some people have the cool to think of calling for help on the cop channels when there's no other way..

'atta boy to the operator.

The case is designed so that the wire can be channeled out the side or
the back to accomodate both front and side-loading cassette players.
I've been using mine in a side-loading cassette player for about 5
months now to use my Alinco DJ580 while mobile. Works like a champ.

Note, if I had it to do over again I'd still buy a decent mobile rig
rather than an HT, but with a speaker mike, the RS cassette adapter and
a Larsen antenna I've put together an acceptable mobile setup.

I hang out on 80mtrs...so I'll keep an ear open for you all.

Best time to do this is JUST before dusk...before the mad rush begins.

Don't worry about sig strength (it's always weaker then and picks up after
sunset...which is about when the whole world gets on)

Watch out for 3700.0 - 3700.7 khz as it's super full of people tuning up
blind, and a commercial station who is deaf.

When the going gets rough, keep repeating..then it's bound to get thru.

--
Idea...rather than send CQ..try this...you each know each others calls,
so, pick a freq free of use, and go on a marathon call-someone-you-know.

The other guy, if he tunes around, will eventually run across you and
have time to get lined up to answer, by the time you turn it over.

I'm up in Connecticut, and there's a ton of SSB on the CW portion, so
I may not get to hear ya...but will keep an ear open.

>party were Novice/Tech+ then I think it's rude for them to occupy
>the tiny band segment allocated to N/T when they have plenty of
>alternative space available.

Last I checked, folks were objecting to CW in the phone segments as rude. This means that the Novice/Tech+ segments are 1/3 of all the availiable space on 40 and 15 meters. Granted, the 80 meter segment is a somewhat smaller percentage, but it seems you are trying to exile high speed CW to ever smaller parts of the band.

Remember, they may not really have other space availiable, given restrictions such as antenna bandwidths.

I suppose it is similarly rude for users of other digital modes, such as packet, to run them in the CW portions of the band, when they have other alternative space availiable?

Alan

CONFIDENCE LEVEL: 65%
```

NOTES:
Predicted geomagnetic activity is based heavily on recurrent phenomena. Transient energetic solar events cannot be predicted reliably over periods in excess of several days. Hence, there may be some deviations from the predictions due to the unpredictable transient solar component.

NOTES:
The 10.7 cm solar radio flux is plotted from data reported
by the Penticton Radio Observatory (formerly the ARO from
Ottawa). High solar flux levels denote higher levels of
activity and a greater number of sunspot groups on the Sun.
The 90-day mean solar flux graph is charted from the 90-day
mean of the 10.7 cm solar radio flux.

Source record: 274033

Gary, you got lost somewhere in reading my post; I think of Morse as an aural language - I write nothing down. I hear, not individual letters, but entire words. There is no mechanical skill involved. Now, with that in mind, go back and reread what I said - it will make much more sense to you. And keep practicing to improve your code speed; once you hit 20 you'll agree it is a language (then you won't have to waste so much of your time with anti-code articles). [Note the follow-up]

>
>Geeze, read what I said. The Novice/Tech segments are small, and they're
>all that Novices and Techs get. It is rude for Extra, Advanced, or General
>stations to use those frequencies for contacts with *other than Novices
>or Techs* when they have a much larger band of frequencies to choose for
>their contact. What I'm saying is that it's polite to *give the Novices
>and Techs a break* by not carrying on Extra-Extra contacts in the little
>slices available to the Novice/Tech classes.
>

I think YOU misunderstood what Chuck said; he stated he wants to
do his part to help novices increase their speed so they can pass the
General and higher classes license exam. An extra-novice contact would
be a privilege for the novice in this case: Chuck Adams is one of the
top-speed code ops in the entire country [famous but modest]. But that
probably wouldn't impress you.

> wasn't so lucky. The sheriff department had him state that he used the
> police frequency illegally and persuaded him to surrender his modified
> HT. It was not mentioned if the FCC got involved or not.

Oh, no, not this again. :-)

It is unfortunate that hams who take chances like the above aren't familiar with the laws under which we operate. For example, the Sheriff had no business confiscating a radio. That is Justice Department jurisdiction. They most especially had no business confiscating property if they filed no criminal charges. That is "unreasonable search and seizure". And, ref the above statement, they can't file criminal charges because violations of FCC regulations are a Federal prerogative.

Somebody should advise this ham to get a lawyer and sue for the return of his transceiver. The only regulations violated were use of a non-type-accepted transmitter on a Part 90 channel, and transmitting without the proper license for the frequency used. Neither of those violations can be prosecuted by a local police agency. Also, he could make a case in his own defense for "emergency" use of the frequency for a bona fide emergency. (He should have notified the FCC Engineer in Charge of his radio district of the emergency asap after it happened, to protect himself.)

4565. grounding the MFJ-16010 Rndom Wire Tuner?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-19 03:07:30 UTC
From: drenze@icaen.uiowa.edu
Message-ID: <1993Nov19.030730.26194@icaen.uiowa.edu>
Source record: 274037

What's the best way to ground the MFJ-16010 Random Wire Tuner (ie, where on the tuner). THis is my situation: When I'm tuning up to the dummy load, my SWR meter registers decent SWR. But when I tune up to my random wire, it registers straight 1:1 SWR--no matter wht settings I use on the tuner.
Any thoughts? Is this caused by lack of a decent ground, and if so, will grounding help, or no?

: Steve/AA7FL

Steve,
Let me add this:

In the 8 to 10 years that I have had TenTec gear, I have never had to
send it in to be repaired.

Only twice have I ever had any kind of problem. Both times I called
TenTec and told them what the symtoms were. They sent me some parts and
told me what to replace. Both times I was able to fix the radio
(an Omni, BTW). They never did charge me for the parts.

Chuck Adams (adams@chuck.dallas.sgi.com) wrote:
: The following is a part of the Phillips Code, a standard set of
: abbreviations used by Morse Operators, Telegraphers, Ham Radio Operators,
^^^^^^^^^^^^^^^^^^^
Of the 150 or so abbreviations, I recognised about 40 that I either use
or have heard :-}

While we are at it, I have a question.

More and more I hear cw ops send a question mark. For example, after I
have sent CQ or maybe after I have signed with a station. What do they
mean? I normally dont respond because I dont know what they want.

Maybe we need a q signal for "Who was just sending CQ?" and "I hear
you guys signing, so who's left?".

NOTE: The Effective Sunspot Number for 17 NOV 93 was 42.0.
The Full Kp Indices for 17 NOV 93 are: 2- 1- 1o 1o 2- 1o 3- 3-

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7618 (N08W05) came to a
bit of life this period producing numerous C-class flares. In
white light, the region showed restructuring and continues to
grow in spot number, area coverage, and complexity. All reports
indicate the region has developed a delta in the north central
portion of the group with kinked a n-s oriented inversion line.
New Region 7620 (N05E71) was numbered last night. This Region
is probably the return of old Region 7608.

Solar activity forecast: solar activity is expected to be
low to moderate. Region 7618 is expected to produce C-class,

and possibly M-class activity for the remainder of its time on the disk.

STD: A full-disk Yohkoh x-ray image has been appended to this report.

The geomagnetic field was quiet to unsettled from the beginning of the period until 1211Z when a disturbance began. A sudden impulse occurred at 1211Z (16 nanotesla in Boulder) and was followed by active to minor storm conditions at mid-latitudes and minor to severe storm levels at high latitudes. Magnetopause crossings were seen at both geosynchronous satellites (STD: GOES-6 and GOES-7) from about 1600-1730Z (STD: for GOES-6, 1604Z to 1718Z). This increase was probably caused by a favorably positioned coronal hole.

Geophysical activity forecast: the geomagnetic field is expected to be mostly active with brief storm periods for the next 12 hours. The field will quiet down to mostly unsettled for the remainder of the period.

Event probabilities 19 nov-21 nov

Class M 60/60/60
Class X 10/10/10
Proton 10/10/10
PCAF Green

Geomagnetic activity probabilities 19 nov-21 nov

A. Middle Latitudes
Active 25/10/10
Minor Storm 15/05/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 50/30/15
Minor Storm 15/05/05
Major-Severe Storm 10/01/01

HF propagation conditions were near-normal over the low and middle latitude regions. Effects of the disturbance noted above were only weakly noticed, particularly on the upper-middle latitude night-sector paths. High and polar latitude paths also saw sporadic signal degradation during the period, again mostly on night-sector transauroral paths where fading, multipathing, and minor auroral absorption contributed to signal instabilities. Signal conditions on transpolar and transauroral circuits are expected to remain sporadically unstable over the next 24 hours. Effects of the current disturbance could persist through much of 19 November before weakening. Thereafter, propagation should return to near-normal over all regions. No significant effects are expected over the

middle or low latitude regions, although night-sector fading
levels should be enhanced on upper-middle latitude paths.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Wilbert, ZL2BSJ. says: (of the Yaesu FT-727):

"Also, the Squelch is very slow to come off, and I keep losing the
first part of the first frame received. Conclusion: a nice dual band
radio, but no good for packet..."
^^^^^^^^

Well, I use the '727 every day for packet and it works VERY well. As you point out, correctly, the squelch is "very" slow - solution? Leave the squelch WIDE OPEN as I do, and use the DCD on your TNC to set the noise threshold. Works VERY well! Of course, it took about a year of relentless retries and lost frames before my friend, Tom (K2PJ) came up with that very helpful solution!

Hope you try it....73,

Gerry Jurrens, N2GJ

A rather old and quaint CW abbreviation- used now only by OT's I think
(greatly intrigued me as a kid) is "E E K" for "OK". Has a nice rhythm
to it. Another one, rarely heard now is "I E" for checking that the
frequency is clear (much better than that klunky "QRL?").

Whatever happened to "HW?" Now we get; "back to you"- ! No wonder some guys
have trouble with CW.

Drew, VK3XU.

4573. Kenwood TH28A mod. question.

Posting for a friend, so send any reply to snorris@trumpet.aix.calpoly.edu
or I'll forward replies to him.
thanks,
winston.

I have read the mod file that is posted on ham.eetech.mcgill.ca but this file includes additions by three different people, each with different modifications. Can anyone who has recently bought and modified a Kenwood TH28A shed some light here for me and verify any of these mods? All I want is extended recieve from 400-520, I really don't care much about the extended transmit range. I have tried lifting one end of diode 9 as listed in the mod file, but nothing happened...the radio acted as if nothing had happend. Can anyone help me here? By the way, this radio has a green jumper wire at each end of diode array D8-D11 and there is no mention of these in any of the mod files i have read.

I prefer E-mail: snorris@trumpet.aix.calpoly.edu, but I do read this group regularly as well.

Thanks,

Sean

Yes! There ARE those who ENJOY and have a knack for CW in the novice bands. I barely passed (not even sure I DID pass) my novice test, in 1960, at 5wpm. But, 9 months later, I took my conditional (anyone remember that one?) at 35wpm and aced it. Anyone remember K7 Little Pink Zipper? Donna and I had nightly "high speed" cw contacts in the novice bands. She even came down there to work me after she upgraded and left me behind. Of course, that was more incentive to upgrade for me, and I did. Don't be so sure the guy running 40wpm isn't a novice. He may surprise you.

Best Regards (singular 73) to all,
Gary (the OTHER one!)

4575. Re: Using modified HT in emergency

In <103360208@hpfcso.FC.HP.COM> ajs@hpfcso.FC.HP.COM (Alan Silverstein) writes:
>> Does anyone have any comments?
>1. I doubt the sheriff had the authority to confiscate the modified HT.
> Probably the FCC could levy such a penalty, but not the sheriff.

The SO did not confiscate the HT, what I heard was that Chris was given a choice, the FCC would either prosecute him for using an unauthorized frequency with a possible penalty of one year in jail and/or $100,000 fine or he could "donate" his HT to RACES.

>2. It is legal to modify a radio.

I don't think the modified radio is the issue here at all.

>3. Has your friend considered making a stink to the media?

There have been two articles in the San Diego Union, they are on the bulletin board at HRO. Here is a summary of the first one, I don't have a copy of the second article.

The article states that everyone acknowledges that it was the ``act of a good Samaritan.'' but that ``authorities confiscated Chris Boyer's portable ham radio last month after he used it to obtain emergency medical help for a seriously injured friend.'' It states that he ran into trouble because he called for help on a Sheriff's Department frequency that he isn't authorized to transmit on. They quote William Grigsby, engineer in charge of the San Diego FCC office: ``"Under the regulatory scheme, ... this kind of operation by persons who are not authorized is strictly prohibited,'' he is also quoted to say that ``We can't have a situation where everyone who wants to have a transmitter on the police or sheriff's frequency can, if this continues, we're going to have chaos for the law enforcement system.''

It states that Boyer tried to get help on five other repeaters but couldn't get anyone, they also tried a cellular phone but couldn't connect because they were ``in a ravine, toward the bottom of a canyon''. He then rode up the trail a half mile and tried again from a better spot but still couldn't get through, at that point they decided to try the SO frequency. The article says `` "I look and this guy's bleeding, he's taken a head trauma," Boyer said. "I came on, gave my call sign - I wasn't trying to hide - and said, 'I'm a radio amateur with emergency traffic.' The dispatcher said, 'Go ahead.'" ''

Two weeks later, he got a letter from Bill Kahn (communications coordinator) for the SO, telling him to meet with Kahn and an FCC person. He was given the choice of having to ``forfeit'' or be prosecuted by the federal government.

There are several quotes from different people including this one
from county Supervisor Dianne Jacob, who represents that part of the county.
``"The frequencies are protected for public-safety emergencies," Jacob said.
"Well, this individual had an emergency.''... ``"I think anyone in the
same circumstances, including myself, would do the same thing."''

In the second article I think there was a story about how Kahn had used
his SO radio to request help when he got hurt while off duty out in the back
country. I think it also quoted all the part 97.403 and mentioned that
Chris Boyer now had an attorney and was going to fight to get his radio back.
I'll try to borrow it to post a summary if there is sufficient interest.

>Maybe we need a q signal for "Who was just sending CQ?" and "I hear
>you guys signing, so who's left?".
>

You just answered your own question. I'll send an IMI if another op
has just made a short transmission which I didn't copy or understand.

You might try sending an IMI back to them as a way of asking ``why
did you just send an IMI at me?'', which might end up turning into
an IMI war similar to the `dit' wars we used to have on 500 kHz:
during quiet periods [not `silent periods'] on 500 [say 0200 local]
someone somewhere in the Pacific would send a single dit; another
ship would answer with a dit; shore stations would join in and
within a few seconds dozens and dozens of ships and shore stations
would be sending dits. As quickly as it started, it stopped. It
was one of those things that made 500 kHz such a unique frequency.

With the current callsign structure it can be difficult to know when you're calling a novice/tech+. I've got a 1 x 3 callsign, just like a tech+, but have had an Extra ticket for 25 years. As a result, when I operate in the novice bands, I tend to answer CQ's from people sending 10 wpm or less, just to avoid the problem of two higher-class licensees cluttering the limited space available to the novice/techs. Problem is, this discriminates against those novice/techs looking for a higher speed QSO. Dare I run the risk of being rude, Gary, and answer an N-XXX call sending CQ at 20 wpm? :-) Seriously, we all ought to drop by the novice bands to chat (with _them_, of course), and not isolate them.

In article 23136@worldbank.org, dearnshaw@worldbank.org (Darrell Earnshaw) writes:
}Dave,
} Unfortunately, a lot of the radio communication that we deal with are pile-ups
}(because of our call: 4U1WB), and for this, the unit is virtually useless.
}
} Having said this... Most of the posts on this newsgroup that refer to the
}NIR-10 don't give it a good write up. I haven't any experience with other
}units, but the Timestep seems to be favoured among other members of the
}newsgroup.
}
}Good Luck, Darrell (NR3Y)

I know two people in the area who have NIR-10's and they love them. In one case the fellow who bought his did so because he had line noise that was S9. he can now copy signals that are normally unreadable.

As far as pile-ups go, nothing is going to help that, the human brain is still the best filter. Some types of noise will fool the unit.

The noise has to display some non-randomness to it so the unit can lock on and "filter" it out. I put filter in quote marks because the DSP unit gets rid of the noise by a mathematical process of inversion.

Good luck,

Bruce, WB4YUC

But what does it all mean? Do you have an interpretation for us lay folks?
What causes this and what are the effects and consequences? Ignorant minds
want to know.

David

>I think I started something here! 8-) C'mon let's see some others
>offer to help too! Can you all say "Spirit of ham radio"?

Count me in! I'm in north Georgia and can work CW on the pre-WARC HF
bands (80/40/20/15/10) plus 2m (all-mode rig). For some reason, 15
is usually open to Calif., sunspots or no, from here.

Send mail, we'll work out a time and freq.

I recall there once being an attempt to start a slow-code Usenet-on-the-air
net, but it died before it really got under way. Maybe it's time to revive
it.

Always looking for an excuse to play with the radio, I am --
--
Larry Kollar, KC4WZK | I like CW, but that doesn't mean I think every ham
lkollar@nyx.cs.du.edu | should have to learn it.

> Just goes to show you what the 'no-clue' license did in RI...

Being from RI, I must agree. The displined culture on the VHF bands is changing for the worse... The problem is that the "clue-less" from CB land carry all their poor operating habits to 2 meters. When more experienced hams try to diplomatically point out that ham radio has a different set of practices, they get offended, rather than using the constructive advice. There does not seem to be any means to reverse this trend, short of increasing education and licensing standards. I cannot think of one single policy that has done more to divide and degrade ham radio than the "no-code" tech license and its published answers to brain-dead questions.

Is 2 meters a lost band?

=========

MONDAY NOVEMBER 22, 1993

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* FO-20 NEWS *
==============
Latest Status:
Nov.12 On 20z pass and 22z pass, software reloading performed.
22:36z MailBox operation resumed.

Operation Schedule:
Analog mode: Nov.17 7:44 -to- Nov.18 8:15 UTC
Nov.24 8:20 -to- Nov.25 8:38 UTC
Dec. 1 8:43 -to- Dec. 7 7:16 UTC
Dec.15 7:41 -to- Dec.22 8:05 UTC

Digital mode: otherwise noted above.

In December, analog mode and digital mode will be ON alternately for a week respectivery. Enjoy!

[Info via Kazu Sakamoto, JJ1WTK]

* AO-13 NEWS *
==============
AO-13 will experience another partial solar eclipse on 1993 Dec 13 [Mon].

It sees the Moon eclipse the Sun from 1009 - 1059 utc with a maximum 53% obscuration at 1034 utc. This is orbit 4211 MA 73-92.

The encounter will be "visible" on the telemetry to stations throughout the USA and Japan. Reports would be appreciated. Stations who observed the spectacular eclipse of Nov 13 will know what to look for.

Eclipses of Sun by Earth:

These commence on Dec 07 [Tue] and continue until Dec 24 [Fri]. The eclipses are of course total. The maximum lasts 2 hours 16 minutes, and is the longest AO-13 has ever experienced. The telemetry during these outages

is very interesting, particularly the temperatures; some reach -40 C.

The mode-B transponder will be OFF from MA 95 to 180 during this two week period.

MISSION DURATION: 14 days

[Info via NASA]

* STS-61 NEWS *
==========
NASA managers set Dec. 1, 1993, as the offical launch date for Shuttle Mission STS-61. The flight will see Space Shuttle Endeavour with a 7 person crew make the first in a series of planned visits to the orbiting Hubble Space Telescope (HST). During the mission, a record five spacewalks will be conducted during which the astronauts will remove and replace various HST systems in order to increase HST's reliability; compensate for the spherical aberration of the primary mirror; and validate the HST on-orbit servicing concept.

The launch window on Dec. 1 opens at 4:57 a.m. EST and extends for 1 hour 7 minutes. The launch window is driven by rendezvous requirements with HST. The mission duration is planned for 10 days, 22 hours and 36 minutes. Landing is scheduled to take place at Kennedy Space Center's Shuttle Landing Facility, Fla., on Dec. 12.

Leading the STS-61 crew will be Mission Commander Dick Covey. Pilot for the mission is Ken Bowersox. The mission specialists for the flight are Kathy Thornton, Claude Nicollier, Jeff Hoffman, Story Musgrave and Tom Akers. Working in pairs, Hoffman and Musgrave and Thornton and Akers, all of whom have previous EVA experience, will perform the five spacewalks scheduled for flight days four to eight.

NEWS RELEASE

CELLULAR SURVEILLANCE INTERFACE

Electronic Countermeasures Inc. announces the release of new software to allow the use of their Cellular Surveillance Interface (CSI) on any cellular system world wide.

The CSI decodes the data transmitted on cellular control channels. It interprets the data as cellular commands, displays it on your PC screen, and tunes your radio.

It is compatible with cellular systems in North America, Europe, the Middle East, Southeast Asia, Hong Kong, etc. Anywhere there is a cellular system using the AMPS, TACS or ETACS standards; including those international systems that use variable control channel starting points for different countries.

In simple terms, the CSI reads the control channel data in a cell and switches your radio to the specified voice frequency when a cellular call is placed or received in that cell. This allows you to monitor the call for voice quality, etc. When the call switches to a new voice channel, your radio now switches as well. In essence, the CSI turns your Icom, AR, or PRO series radio into an extension of the phone you're monitoring. No more partial calls. You get it all.

The CSI is a high tech, low-cost test instrument for the cellular service shop. It has additional application as a fixed or mobile surveillance unit for law enforcement, and a tool for the engineer or hobbyist in the development of new cellular and other radio data applications.

The CSI is shipped complete with all cables, radio mod kit, and the latest PC software package.

RE: PACKET RADIO TNC INFORMATION.
ATTN: ALL HAMS INTO PACKET RADIO COMMUNICATIONS

I am employed by the Fayette County, PA Emergency Management Agency
in charge of the computer equipment. My boss recently asked about the
possibility of using packet radio over our radio channels. (Commercial
Public-Safety channels).

Here is the problem. We will be upgrading Communication equipment
to a Motorola Smartnet 800MHZ Trunked System. Does anyone have
any information concerning the interface of a packet node controller
to a trunked two way radio (Motorola Maxtrac 800).
Due to the design of trunked systems, *INSTANT* transmit of a field
unit thru the repeaters is not possible. Also if the trunked system
gives you a busy channel status, the packet controller needs to know.

I appreciate any help that you can give.

My Mom and Dad, at 59 and 61, respectively, passed their tests to get licensed. Mom was going for Technician, and passed both elements. Dad was trying for Tech-Plus, and passed the 5 wpm and the Novice tests, but had a little trouble on the Technician test. He'll be retaking that one again real soon.

This solution can cure other problems as well. I recently placed an old
xtal-based Swan FM-2X on packet, and had problems with a noisy audio circuit
with the squelch closed. Apparently the squelch does not turn off the final
audio amp and enough noise gets through to make my TNC think the frequency
is busy. Running open squelch and DCD cured the problem without having to
modify the radio.

By George, it fits. Particularly since much of CW is made up of prosigns and abbreviations which are very unlikely to be seen on the other modes. I had been of the other school before, but I think I've been converted.

I just couldn't let this one go by. 8^) There are many different forms of
Sign Language that exist. The two most well known in the US are the
Rochester Method (aka Signed English), and American Sign Language (aka AMSLAN).
The Rochester method just takes english words and makes gestures for them.
But, AMSLAN is a language all it's own, with it's own grammar, syntax, etc.
While most of the deaf community in the nation know both AMSLAN and Rochester,
AMSLAN is almost exclusively known by the deaf community.

Just my .02 worth.

: A rather old and quaint CW abbreviation- used now only by OT's I think
: (greatly intrigued me as a kid) is "E E K" for "OK". Has a nice rhythm
: to it.

I, too always wondered where that came from until I saw a list of
the old land-line Morse code. It used "dit" (short pause) "dit" for
the letter "O". (The "short pause" is longer than a normal did spacing
but shorter than a normal letter spacing.) So "OK" would be
dit dit dah-di-dah, which sounds like "E E K" in modern
Morse code.

4603. Adams-Phillips code & "LID"

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-19 19:58:16 UTC
From: ham@wam.umd.edu
Message-ID: <2cj8go$ns8@cville-srv.wam.umd.edu>
Source record: 274068

So where did the phrase "Lid" come from, we always used to ask....

Well, apparently iy was used in the Adams-Phillips code. WHY would
a poor operator be called a "LID," though? What's the origin?

Our repeater id used to say

"73 de W3EAX No Lids" in code at about 20 wpm. It was kind of funny
when people would ask, "What did that just say?" Not to imply that
people who can't copy 20 wpm ARE lids or anything like that, but it
was funny in a kind of sarcastic way.

Scott Rosenfeld, NF3I, wondered where the term LID came from.
I didn't make it up and neither did Phillips.

When Morse first started the telegraphic service, the system
consisted of wooden clock gears, etc. and a pencil was drawn
across a moving roll of paper to receive info. An assistant
one day noted that he could copy the letters, etc. from the
sound. This lead to a sounder system using electromagnets
etc.

My guess would be, during the early days of telegraphy, a
poor operator or new operator was probably transmitting
messages across the network and somebody probably made an
off the cuff remark "that sounds terrible, like striking
a lid on a jar". And somebody else probably said "You're
right! It does sound like a LID." Thus the origin of the
term LID. Original from the mind of K5FO. :-)

Sounded good to me.

At 80 wpm it does sound like rain on a tin roof. - W5GOS

> >
> > Gary

I'll have to agree with Gary, whichever he is. But note that
Gary speaks of the LICENSE situation, NOT the amateur people
situation.

Heck! If *I* can pass the Novice and Tech tests at the first
sitting, without ANY help or classes or anything other than
ARRL's "Now You're Talking" book, the test's GOTTA be too easy.
(OK guys, you can use the testimonial if you want.)
*:-> (with holiday party hat)

And, yes, the tests do seem to be on reference - look it up -
kinds of material. I'll grant that the FCC wants a licensee to
prove in writing that he/she knows what the band limits and other
rules, and safety practices are, so the licensee can't say "I
didn't know." And that's what the exam should be -- to prove to
the license issuer that you know the rules and can use the
bandwidth efficiently. Drivers' license tests are the same --
you prove that you know the rules, not that you know how to drive
to work or to Walt Dizzy World.

One of the big complaints about our education process today is
that we spend too much time teaching "look-up-able" facts, and
too little time teaching "how to find what you need". At this
level, though, perhaps there should be classes in how to USE
amateur radio. Now, THAT would be a good class. How about it,
local clubs? Do these exist? No license-like test needed, but a
snazzy wall-hanging would be a lovely second thing to hang in the
new shack.

Nope. Close, but actually the term 'lid' described the younger operator
who would attach a jar lid to the sounder mechanism to magnify it's output.
The older, more experienced ops didn't need the jar lid diaphram to hear
(then) Land Line CW, made the term a derrogatory one. FROM: "EDISON, deaf
genius" Prent-Hall Pub.

As Thomas Alva became more and more deaf, he ended up copying by either
touching the sounder unit or using a flashing light system towards the end
of his life...

>

In addition to the responses on the net, I received about 18 e-mail
messages.

ALL of them were very positive about the OMNI V (and Ten Tec gear in
general). Thanks for the input. It's all benn very helpful.

BTW, several hams told me that they owned several rigs and ended up selling
the others because they were spoiled by the Ten Tec. The closest I received
to an endorsement of another manufacturer's rig was by someone who said
that the 930S came closest to performing as well as the Omni V.

Right. I really wish they'd build a radio with a 0 Hz offset so you don't
have to do the math. Hitting the SSB mode switch sort of gets you there,
but only from one side, and there's a gap between zero beat and (I guess)
the bottom end of the audio pass band, but you can get a pretty good estimate
even so.

Foothill Electronics Museum (RIP) had a similar,
but smaller, magnet displayed outside its entrance.
The legend explained that the alcohol vapor enclosed
arc has negative resistance when it's in a magnetic field.
This was used with a tuned circuit to form a high power
'two terminal' oscillator. I don't recall a rotary spark
gap as part of this. A rotary gap could certaintly be
used as a switch to shock excite the tuned circuit.
In WWII, rotary spark gaps were used to produce pulse
modulation for some radars; thyratrons and hard (vacuum)
tubes replaced them.

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7618 (N07W19) continues
to be the most impressive region on the disk. Overall, the
Region has been stable the past 24 hours. Region 7620 (N04E57)
appears stable as well.

STD: A delta configuration continues to exist in Region 7618.

Solar activity forecast: solar activity is expected to be
low to moderate with Region 7618 expected to produce C-class
and possibly M-class activity.

STD: A new region is approaching the northeast limb. Recent Yohkoh x-ray imagery of this area suggests a possible eruptive region may be rotating into view shortly. This supposition is strengthened by NSO observations of enhanced (moderate) Ca XV limb emissions at this region. NSO plots of these emissions, as well as pseudo-full-disk maps are available at the anonymous FTP site: ftp.uleth.ca (previously known as xi.uleth.ca) in the directories "pub/solar/Corona/Scans" and "pub/solar/Corona/Maps". There may be some additional Ca XV emission intensification over the next 24 hours from this area of the northeast limb. Recent optically uncorrelated long-decay B and C-class x-ray activity may be originating from this site. Another Yohkoh x-ray insert has been appended to this report showing this new limb source of x-ray emissions.

The geomagnetic field has been at quiet to major storm levels at middle latitudes and quiet to severe storm levels at high latitudes. Yesterday's disturbance continued through 06Z today with active to storm level conditions. Since then, the field has been mostly quiety to active with some brief storm levels at high latitudes.

Geophysical activity forecast: the geomagnetic field is expected to be mostly unsettled. Recurrence effects may increase activity sometime late on day three.

Event probabilities 20 nov-22 nov

Class M 60/60/60
Class X 10/10/10
Proton 10/10/10
PCAF Green

Geomagnetic activity probabilities 20 nov-22 nov

A. Middle Latitudes
Active 20/10/45
Minor Storm 10/05/15
Major-Severe Storm 05/01/05

B. High Latitudes
Active 40/10/65
Minor Storm 05/05/05
Major-Severe Storm 01/20/01

HF propagation conditions became occasionally below-normal for the upper-middle to polar latitude paths during the local night sector of 19 November. Most other regions experienced near-normal propagation. Conditions are expected to gradually improve on 20 and 21 November. Additional minor signal degradation may be observed again over the higher latitude paths on 21 November in response to recurrent activity. At the present time, no significant changes are expected over the next three days. SWF activity is still a good possibility over

sunlit paths.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>Paul Marsh N0ZAU Omaha

What an excellent idea, Paul. Let's take it further. Pass the test,
but don't allow actual on-the-air operation until such a certification
was earned (yeah, I hear the moaning already!). The "how-to" could
even be earned before testing - wouldn't matter. It might even spark
some of the old fuddy-duddy clubs into doing something new. Most clubs
in lesser populated areas are nothing but a signup sheet and trying to
figure out how to keep the local repeater power bill paid.

Thanks for the words, Paul. Even if you don't go along with the above
paragraph. Hi. Ever get out this way? Call me on 2m.

73, Gary

Thanks for the warning; we've seen it already. Rest assured
that no one here is going to go nonlinear over this sort of thing.
Frankly, I didn't bother to reply. I just barely managed to bother to
read it.

For a good summary of my attitude, take a look at page 58 of
"The Mac Internet Tour Guide", in the little box under "Dear Sysadmin,
punish your user for what he said!" The quote there that begins "I
believe you need a short lesson in the operation of free speech", is
in fact mine, though unattributed. It ends: "if these posting offend
you, I suggest you find out how kill files work, instead of wasting
the time of overworked system administrators who aren't being
underpaid to deal with this sort of childishness."

Cheers,

- nick

4623. FM SUBCARRIER BROADCASTS

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-20 08:50:51 UTC
From: THESCHUH@delphi.com
Message-ID: <931120.13851.THESCHUH@delphi.com>
Source record: 274001

I recently bought a Ramsey SCA (Sub Carrier Adaptor Kit) and have been searching the commercial FM band for interesting stuff. Below is a list of SCA Stations in Houston.

Frequency Callsign Programing

88.7 KUHF TALK
89.3 KSBJ DATA
90.9 KTSU DATA
92.1 KRTS DATA
93.7 KLTR DATA
99.1 KODA MUSIC
102.9 KQUE MUSIC
105.7 KHCB MUSIC (DISTORTED)

I would like to corrospond with someone who has attempted to decode the DATA broadcasts or who has some information about them. i.e.

1. what are they?
2. are they ASCII?
3. are they encoded?
4. what is the baud rate?

and any other information available.

Bud Holzschuh KF5IO

VK2SG RTTY DX Notes, 19 November
VK2SG RTTY DX Notes for week ending 19 November 1993 (BID RTDX1119)

It is not too late for you to write to your representative on the DX
Advisory Committee (DXAC) expressing your support for a RTTY (digital)
Honor Roll. Committee votes will be tallied, and announced, at the
end of November.

Our information this week came from 9X5LJ, DJ3IW and the DB0BCC
Cluster Node, I5FLN, IK5AAX, K0IR, K0SR, ON7GB, W2TKU, WB2CJL, ZS5S,
The NJ0M Node of the Twin Cities DX Packetcluster Network, and
OPDX/BARF80. Thanks to all for your help.

The WAEDC provided most of the RTTY activity this past week.

Notes of Interest:

There have been erroneous, on-the-air reports, that the upcoming February 1994 Peter I DXpedition (3Y0PI) has established certain rules about multiple band/mode contacts, and portable station designators. Ralph, K0IR, leader of the expedition, has emphatically stated that no such rules exist, nor or any contemplated.

Republic of Belau, KC6 - Several Japanese operators will be active on all bands, 160-6 meters, this weekend until Tuesday 23 November on RTTY/CW/SSB. QSL to JK1QHK.

South Cook I., ZK1 - Now, until 25 November, three Japanese operators will be active from here on all bands, 160-10 meters, RTTY/CW/SSB. QSL to JI1NJC.

French Antarctic Islands, FT8X, FT8Z - Christian, FT8WD is leaving Crozet on 24 November. The ship picking him up will deliver another ham to either Kerguelen or Amsterdam Island. Details when available.

The DXCC Desk advised Steve, K0SR, that TT8OBO is not being accepted at this time pending the receipt of proper documentation. A previous credit for a contact with him last Spring was removed. If your DXCC has been credited with TT8OBO, better verify if it is still in your current total.

QSLs from the recent 9H1HL operation are arriving. Has anyone seen cards from E31A yet?

For next week's Bulletin, send your Bandpass and Notes of interest to Luciano, I5FLN @ ZS5S.ZAF.AF or I5FLN @ 9X5LJ.#KGL.RWA.AF.

Well said! The ARRL has served us well and continues to do so! Even
Wayne Green recommends that all hams be league members. As with most
things in life, what we get from the ARRL is directly related to how
much we give..

In fact, I find that most league bashers are not members and have
never been members.. I have found that questions addressed to the
Headquarters staff are usually answered quickly and courteously. Some
elected officials are less responsive than I would like. But, I can't
help fix it by standing on the outside and yelling at them.

Emotion aside, If you investigate the situation, I think you will
find more reasons to be a member than not. And, if you are a member,
your opinions will certainly count more than those who stand on the
outside and yell.

I'm not an organizer and I am not an activist. I'm just an average
ham who gets his money's worth from League membership.

SB DX @ ARL $ARLD063
ARLD063 DX news ZCZC AE89
QST de W1AW DX Bulletin 63 ARLD063 From ARRL Headquarters
Newington CT November 18, 1993
To all radio amateurs

Thanks to Bob, W5KNE; QRZ DX; Tedd, KB8NW; the OPDX PacketCluster Network; John, W2GD; and Frank, OH2LVG, for the items in this week's bulletin.

PETER ONE ISLAND. Here are three brief items of interest. Tony, WA4JQS, reports all equipment for the DXpedition has been crated. Permission has been secured to operate /MM while enroute to the island. This may be the first-ever satellite operation from Peter One.

SINGAPORE. James, 9V1YC, is on around 7005 kHz between 1045 and 1115z every day looking for North and South American stations. 9V1ZE has been worked on 7005 kHz at 1218z.

BOTSWANA. Arno, OH7XM, plans to be active until December 5 as A25/OH7XM. Listen for him in the CQ WW CW Contest as a 40 meter single category as A22MN. QSL via OH7XM.

UNITED ARAB EMIRATES. Members of the Dubai Men's College of Higher Technology are operating their new club station A61AF. They have equipment for HF, VHF and satellite operations and were heard in the CQ WW SSB Contest. QSL to Dubai Mens College, PO Box 15825, Dubai, UAE. Only cards dated 3 August 1993 and after are good for DXCC.

BENIN. TY1PS was heard calling CQ on 14083 kHz RTTY around 2300z, with very few takers. He was also heard on 21085 kHz at 1850z.

CAMBODIA. Sanyi, XU7VK, was on 7065 kHz recently around 1230z working YBs and DUs on SSB. He runs a KW into a wire antenna. QSL via HA0HW.

GAMBIA. Gary, C53HG, is active on 75 meters once or twice a week. He hangs around 3795 kHz at 0500z, though has been heard there as late as 0700. Also listen for him on 15 meters between 1800 and 1900z, and then on 20 meters between 2000 and 0100z.

MOZAMBIQUE. C91AJ has been worked on AO13 at about 0255z. QSL via CT4RM.

BOSNIA HERZEGOVINA and CROATIA. Carl, OH6XY, team leader of RadioTeam Finland, is serving on the UN High Command on Refugees in the former Yugoslavia. His stay is through November 1994 and can be worked as either 9A/OH6XY or 4N4/OH6XY.

NETHERLANDS ANTILLES. Carl will also be on from Curacao during the CQ WW CW Contest as PJ9Y as a 40 meter single op entry. He will be active before and after the contest period with a bonus of some six meter operations.

Jukka, OH3GZ, is Carl's QSL manager and has the logs for the following calls,

9A/OH6XY, ZA/OH6XY, ZA2A, PJ2/OH6XY, PJ9Y, 4N4/OH6XY and T9/OH6XY.

ARUBA. P40W will be activated November 22 to 30 by John, W2GD, including the CQ WW CW Contest on the 27th and 28th. Outside the contest, John will be active on the WARC bands and on 160 meters on the hour after dark. QSL to N2MM.

FRENCH SAINT MARTIN. Members of the North Jersey DX Association will be active as FS/W2QM from December 1 through 8. They will operate 160 through 10 meters with SSB and CW. QSL to W2QM.

GM&#65533;and followed the best advice I've yet heard -- KEEP A LOG! :-) While I reali
&#65533;that logs aren't officially required these days, they really do help keep
&#65533;track of who's who -- especially when more than three or four people are in
&#65533;a roundtable. It's also more than just records of names and calls scratched
&#65533;on paper -- it's a piece of your life. Even in the short time I've been on
&#65533;the air, I get a lump in my throat when reviewing the log. . . stirring
&#65533;memories of memorable conversations with old friends and old timers. There's

Amen to that. I recently completed the entry of all of my old paper
logs into my logbook database on the pc. Amazing how the old QSO's
come back to life after 20 years...

One thing I learned, with my new database time and dates recorded in
GMT - I wish I hadn't logged in CST/CDT back then.

>>alternative space available.
>
> Last I checked, folks were objecting to CW in the phone segments
>as rude. This means that the Novice/Tech+ segments are 1/3 of all
>the availiable space on 40 and 15 meters. Granted, the 80 meter
>segment is a somewhat smaller percentage, but it seems you are
>trying to exile high speed CW to ever smaller parts of the band.

Well first of all you won't hear me objecting to A1 emissions in the voice parts of the HF bands. That's what notch filters are for, especially the new multi-notch DSP filters. I'm for anything that pushes the radio art, and band sharing between voice and Morse is one such thing.

I'm, mildly, objecting to running race cars on the learner's track. The beginners aren't as skilled at separating signals and need a little more elbow room to conduct their activities. So I'm suggesting it would be good to voluntarily restrict our activities as experienced amateurs to making contacts with N/T stations in their band segments rather than using that spectrum for our general operations. It's not illegal, immoral, or fattening for Extras to chat with each other in the Novice bands, but it isn't very considerate of the beginners trying to also use their limited slice of spectrum.

N/T have none of 160 meters, 1/10th of 80 meters, 1/6th of 40 meters, none of 30 meters, none of 20 meters, none of 17 meters, 1/5th of 15 meters, none of 12 meters, and 2/17ths of 10 meters for A1 operation. A total of 400 kHz out of 3.6 Mhz available to Extra class CW operators at HF. Avoiding voice and image allocations too, most of which are on 10 meters, the Extra still has 1.5 MHz available for CW. For a mode that claims to be so spectrum conserving, when done by experts, that should be plenty.

> Remember, they may not really have other space availiable, given
>restrictions such as antenna bandwidths.

I'd laugh if this didn't make me want to cry. Somebody with a higher than N/T license should know how to deal with this. If hams can load

bedsprings and work the world, it's been done, then this isn't a
reasonable objection except in some rather exceptional circumstances,
mainly at 160 meters where N/Ts can't go anyway.

> I suppose it is similarly rude for users of other digital modes,
>such as packet, to run them in the CW portions of the band, when
>they have other alternative space availiable?

Since the data modes are *restricted by regulation* to the data portions
of the HF bands, erronously called the CW portions, while the CW operators
are not, this is a red herring. There are "gentlemen's agreements" between
the data users and the CW users that voluntarily restrict the data users
to small segments of their legally available spectrum. Those agreements
are in a bit of flux as data use increases, but it's the CW operators who
have other HF spectrum legally available, not the data users.

>Gary, you got lost somewhere in reading my post; I think of Morse as
>an aural language - I write nothing down. I hear, not individual letters,
>but entire words. There is no mechanical skill involved. Now, with that
>in mind, go back and reread what I said - it will make much more sense to
>you. And keep practicing to improve your code speed; once you hit 20
>you'll agree it is a language (then you won't have to waste so much of
>your time with anti-code articles). [Note the follow-up]

Sorry, it's you who didn't read what I said. The process by which you "think of Morse as an aural language" is flawed because you're lumping the mechanical process of the operant conditioned neural nets that decode characters with the higher functions that combine characters to form words. Just as phonomes aren't language, neither are the sounds you hear in Morse that encode alphanumeric characters. Like reading, once you condition the mechanisms of pattern recognition in your brain, you don't consciously "spell out" each word. You "just see them" or "just hear them" in your mind. But that doesn't make the alphabet a language, nor does it make the Morse encodings of the alphabet language. Both pattern recognition mechanisms are just conditioned mechanisms that lie below the level of language interpretation in the higher brain centers. So Morse is no different in principle than any other alphabetic encoding of language, such as this printed screen. In this case, conditioned visual pattern recognizers identify the shapes that form the letter encodings, a totally mechanical process, and your mind then assembles those decoded symbols as words.

Note I've redirected followup back here since this isn't a policy issue. It's a technical issue.

Source record: 274016

I have just got the October 1993 Buckmaster HAMCALL CD-ROM for my PC.

Is there a bug when using LOOKUP to search for non-USA calls with only 5 characters. I can search for my own call GM8AOB OK, but when I put in an English or French call GxXXX or FxXXX then it does not find it ?

No problem when I use ICALL GxXXX etc

I take it there is no way to access the international part of its database to search for surnames ?

Hello fellow netters,

My 70cm radio has just given up the ghost, and I need a service manual
or even a copy of the schematic so I can fix it.

It is an ex-pmr radio manufactured by ClearTone. Model CMU-350

Any help appreciated. Looks like the VCO has died.....

73,

Steve

4635. This Week In Amateur Radio - Edition 38

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-21 02:20:34 UTC
From: KXKVI@delphi.com
Message-ID: <931120.76834.KXKVI@delphi.com>
Source record: 274011

These news items are covered on Edition #38 of "This Week in Amateur Radio", North America's satellite-delivered bulletin service, for the week ending 26-Nov:

1. Commercial Radio Program on Amateur Radio Goes National
2. New Astronaut Appointed to Columbia STS-67 Astro-2 Mission Crew
3. "This Week in Amateur Radio" to Be Displaced in LTRN Satellite Move
4. "The RAIN Dial-up" from Chicago
5. FCC Releases New Fine Schedule Designed to Pay Off National Debt
6. Upcoming Special Event Stations with Adrian Sebborn, N1JWO
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast with George Bowen, N2LQS
9. Live Telephone Call-in Segment to Air Next week
10. "YL Spotlight" with Carli Drake, WB1BTJ
11. New 10 Meter CW Beacon on the Air from Greece
12. Current DX News and Information
13. "Newsline '93" from Los Angeles - Edition #849

This weekly bulletin service/audio newsmagazine originates from Albany, New York, and is produced by Community Video Associates, Inc., a non-profit, charitable, tax-exempt foundation. "This Week in Amateur Radio" is heard throughout North America on the "Let's Talk Radio Network" each Saturday at 5:00 PM (EST) via the GTE Spacenet 3 commercial communications satellite, transponder 21, 5.8 MHz wideband audio. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Expenses incurred in the production of this weekly service are underwritten by contributions from repeater operators and amateur radio clubs. For further information, contact George Bowen, N2LQS, at 518/283-3665, Stephan Anderman, WA3RKB, at 518/877-7374, or Adrian Sebborn, N1JWO, at 413/458-8219, or via amateur packet @ WA2UMX.#ENY.NY.USA.

4636. How to find the answers to frequently-asked questions about Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-21 02:44:04 UTC
From: ikluft@kluft.com
Message-ID: <ham-faq-ptr-1-753849843@kluft.com>

Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
------------------------------------------------------------------------

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th of each month. This article is posted on the 14th, 21st, and 28th of
every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ-----------------------------------

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews
------------------
If you are familiar enough with NetNews to look through previous articles on
your system, Option #1 above may be the easiest for you. The FAQ is posted
so that it should not expire from your site's news spool until the next one is
posted. Unfortunately, some news administrators do not honor the expiration
dates meant to preserve the FAQ.
```

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites
which are directly connected to the Internet. If you don't know how to use
FTP and can't find a friend to help you, continue to Option #3. If your site
is not connected to the Internet, you should also continue to Option #3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily
ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

Darin, following are a couple of mod files i have for the 732A. I
copied them from Packet, and can't vouch for their accuracy.

73 de Leigh/KM6JE in Santa Barbara, the compulsive mod file collector.

_____
==== BOYAN Log to Disk, 08/04/93 at 04:47 ====
From: KB2LPW@KB2LPW
Subject: MODS FOR KW 732a

Lots of people posted want messages for THE MODS for 732A. Well here they go.
Enjoy!
73's de Chris KB2LPW @ KB2LPW.#NYC.NY.USA.NA
-=-=-=

TO PERFORM ANY OF THESE MODS, REMOVE THE BACK COVER FROM THE REMOTE
HEAD UNIT. RESISTOR NUMBERS CLEARLY MARKED ON BOARD ALONG TOP.

800 MHZ RECEIVE
TO ENABLE 800 RECEIVE, SWITCH TO UHF VFO (NOT AVAILABLE IN UXU),
PRESS AND HOLD MHZ BUTTON UNTIL 800.000 APPEARS.
A CAPACITOR MUST BE ADDED (C348) TO ENABLE THE 800 RECEIVER.
TO ADD, REMOVE UHF TRANSCIEVER BOARD AND NEXT TO THE PAD OF PIN 1
OF IC-202 (ON THE FOIL SIDE), ADD A 2.2 PF CHIP CAPACITOR.
A WIRE CAN BE USED INSTEAD OF THE CAPACITOR BUT SENSITIVITY WILL
BE REDUCED. (SEE SCHEMATIC DIAGRAM FOR REASON).

HARD-WIRE CLONING (WORKS IN ALL CONFGURATION MODES)
THIS PROCEDURE ALLOWS YOU TO CLONE THE ENTIRE MEMORY OF A 'MASTER'
TRANSCIEVER INTO THE MEMORY OF A 'SLAVE' TRANSCIEVER.
FIRST, CONSTRUCT AN RJ-45 JUMPER CABLE AS FOLLOWS:

```
------! !------
UP ---------------------------- UP NOTE THAT PTT AND DOWN
E ----------------------------- E ARE CROSSED END-TO-END
PTT ---------------------------- DOWN
DOWN --------------------------- PTT
------! !------
```

FOR HACKER'S REFERENCE: UP=CLK, PTT=SO/, DOWN=SI
1. CONFIGURE THE MASTER TRANSCIEVER'S MEMORIES AS DESIRED.
2. SWITCH POWER OFF, HOLD DOWN F AND MHZ KEYS AND SWITCH
POWER BACK ON WHILE HOLDING KEYS. DISPLAY WILL SHOW 'CLONE'.
3. SET THE SLAVE TRANSCIEVER IN THE CLONE MODE (AS IN STEP 2).
4. PLUG THE CABLE INTO THE TWO RADIOS (WHICH END DOES NOT MATTER).
5. PRESS THE CALL BUTTON ON THE MASTER. WHEN 'END' IS DISPLAYED,
OPERATION IS COMPLETE.

ON AIR CLONING (DOES NOT WORK IN K1 OR E1 MOD MODES)
THIS PROCEDURE ALLOWS YOU TO CLONE A SECOND TRANSCIEVER AS ABOVE,
OVER THE AIR. THE DATA IS TRANSMITTED AUTOMATICALLY USING DTMF
TONES. DURING TRANSMISSION (WHICH IS ONE-WAY ONLY), THE MASTER
WILL AUTOMATICALLY SWITCH TO LOW POWER. TO BE LEGAL, USE ONLY A
UHF CLONING FREQUENCY.
THIS PROCEDURE IS NOT ENABLED IN THE STOCK TRANSCIEVER. AT A
MINIMUM, YOU MUST CUT THE GREEN WIRE TO MAKE IT WORK.

1. CONFIGURE MASTER TRANSCIEVER'S MEMORIES AS DESIRED. SELECT
A UHF SIMPLEX TRANSMIT FREQUENCY AND SET PTT TO UHF (WILL WORK ON
VHF BUT IS NOT RECOMMENDED).
2. SWITCH THE POWER OFF. PRESS AND HOLD THE CALL AND DTSS BUTTONS
AND TURN THE POWER BACK ON. 'CLONE' APPEARS IN DISPLAY.
3. SET THE RECEIVE FREQUENCY ON THE SLAVE TRANSCIEVER THE SAME
AS THAT OF THE MASTER. TURN POWER OFF, HOLD DOWN CALL AND DTSS
KEYS AND TURN POWER ON. 'CLONE' APPEARS IN DISPLAY.
4. PRESS THE PTT ON THE MASTER'S MICROPHONE. DATA TRANSMISSION
WILL BEGIN. IN CASE OF A RECEIVE ERROR, THE SLAVE TRANSCIEVER WILL
DISPLAY 'ERR'. WHEN THE PROCEDURE IS COMPLETE, BOTH RADIOS WILL

DISPLAY 'END'.

THE FOLLOWING FEATURES ARE UNVERIFIED, SO
YOU MAY NEED TO EXPERIMENT FOR YOURSELF

PAGING ANSWERBACK (DOES NOT WORK IN K1 OR E1 MOD MODES)
THE EXACT OPERATION OF THIS FEATURE IS UNCLEAR BUT THE FOLLOWING
DESCRIPTION HAS BEEN GIVEN:
1. TO ENABLE, HOLD DOWN THE F KEY AND PRESS THE TONE KEY.
2. DO DISABLE, REPEAT STEP 1
WHEN ENABLED, DOCUMENTATION SAYS: 'IF A MATCHING CODE IS RECEIVED
AND THE OTHER TRANSCIEVER IS NO LONGER BUSY, THE CODE OF THE LOCAL
TRANSCIEVER IS SENT TO THE OTHER TRANSCIEVER. THE ANSWERBACK
FUNCTION THEN TURNS OFF.'
MEMORY RECOVERY (REQUIRES DTMF MICROPHONE)
(DOCUMENTATION OF THIS 'FEATURE' IS DIFFICULT TO COMPREHEND BUT
PERHAPS SOMEONE WILL FIGURE OUT WHAT IT DOES.. I SUSPECT THAT
'RECOVERY' REFERS TO RETURNING THE MEMORIES TO THEIR ORIGINAL
STATE AFTER CHANGING THE SPLIT MEMORY LAYOUT.)
1. HOLD DOWN F AND C.SEL, TURN ON POWER
2. PRESS D, FOLLOWED BY 7 ON THE MICROPHONE. 'INSPECTION MODE'
IS NOW ENABLED.
3. TO CANCEL, PRESS AND HOLD F AND THEN C.SEL
'NOTE: BEFORE RECOVERY, THE MEMORY CHANNELS MUST BE RETURNED TO
THE PREVIOUS STATE (NUMBER OF SPLIT MEMORIES, ETC.).'
eof

==== BOYAN Log to Disk, 08/04/93 at 05:27 ====
From: K0ZL@W0LJF
Subject: TM-732A NEW INFO

BEWARE! As with many of Kenwood's current products, Kenwood has
changed the microprocessor program in TM-732 to require a
DIFFERENT beyond-MARS mod than is discussed in a recent edition
of a popular mod handbook.

Refer to the illustration in said book. Instead of removing W1,
you need to PUT IT IN (use any small piece of wire). Then, move
R20 R19 position, AND ADD ANOTHER 0 OHM JUMPER TO R22. R21 and
R20 will be clear of jumpers when you are done.

The air band mod requires a 22pf chip cap at C348; I used a small
22pf disk cap with success. Just be careful when soldering it in.

Please remember that using this radio outside the ham bands is
illegal! This mod is for out of country or laboratory use only.

4639. Kenwood TS-850 Mod Files and Undocumented Features

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-21 04:32:09 UTC
From: LMARRIN@delphi.com
Message-ID: <931120.84729.LMARRIN@delphi.com>
Source record: 274014

Following is a long file copied from Packet with mod files, comments
and undocumented features of the Kenwood TS-850. I hope it is of
interest.... 73 from Leigh/KM6JE.

Date: 11 Nov 93 01:12
From: KB9BYQ@KA9JAC
Subject: TS-850 MODS & MENU NOT IN BOOK.

Subject: TS850S mods

Having lived with Kenwood's TS-850S tranceiver for 5 days, here are some
of my observations:

While the manual shows 35 power-on front panel adjustments, there
really are 36. Function number 35 is set from the factory to the
OFF state. Well, what exactly is this unknown function? Well
Bunkies, this enables the tranceiver to transmit on 27.500 through
28.000 mhz!

Tone control. The setup only allows Burst or Continuous
modes, there is no way to turn it OFF, even though the manual
indicates there is a way.

Quick memory function. You MUST pass through either the VFO A or
VFO B registers to program these.. You cannot go from standard
memory to quick memory directly

VR12 & VR13 - S Meter adjust
VR14 & VR15 - AGC adjust. My 850S also came out of the box with the
RIT/XIT control not displaying 0.00 khz at fiducial (12 o'clock
position) center. Behind the front panel in the upper right corner
is the control for center adjust. It just needed a wee bit of tweaking...
Along with this control on the circuit board are the master adjustments
for the SSB slope tuning (High Cut and Low Cut).

When both top and bottom covers are removed, on the left-hand side
is the FM board. There are 3 (three) pots on the board. They are
FM Wide (12khz) deviation, FM Narrow (6khz) deviation, and FM Mic
gain

When adding additional filters, is is necessary to set the
corresponding switch on. Under the hatch on top, is a 4 position
dip switch. The manual shows a picture of it, but makes no mention
of their settings. This switch is necessary to inform the micro-
processor of the filters' absence or presence. ON is for presence,
OFF is for absence.

.The radio uses 2SC2789's...
These devices are rated as 100 watt devices Kenwood is running
the finals VERY conservatively. When playing around with output,
I had the rig dead-keying 175 watts, but backed it down to 100
watts, as I didn't want to blow up the rig, but I was definitely
smiling as the Birds' meter swung with a 250 watt slug!

Hidden function!!! If you turn on the radio while holding down
the VOICE button, EVERY button on the radio will acknowledge its
function via morse code!

ALL BAND TRANSMIT

The All-band transmit modification requires you to cut a diode
on the the digital board which is located behind the front panel.
The US version of the radio has diode D11 installed, and diode D9 removed.
D11 must be cut. This modification IS NOT for the faint of heart, as it
entails removing the front panel. This modification will also allow the
antenna tuner to tune anywhere the receiver is tuned.

Additional Front Panel Functions--
Pressing SCAN + TX-M.CH will set the radio into its extended
function mode. These options can be scrolled via the M.CH/VFO CH.
switch. The following are the extended functions:

00 - This is the ROM Checksum displayed as a 4-digit hexadecimal number.
This cannot be changed.

01 - Allow filter selection in transmit. Initially set OFF.

02 - Antenna tuner power down. Initially set to OFF.

03 - Antenna tuner non-stop mode. When set to on, the antenna
tuner will not stop when the lowest VSWR is found. Initially set to OFF.

04 - Store mode, and filter settings prior to changing bands, or channels.
Initially set to ON.

05 - Display -HELLO- on digitial display, and send it in Morse code on
power up. Initially set OFF.

06 - Turn full LCD display ON on power on. Initially set OFF.

07 - Turn Subtone ON or OFF. Initially set ON. Note that even when set off,
the TONE indicator will be lit on the display.
08 - Unknown. Initially set OFF.

HERE ARE THE STEP BY STEP INSTRUCTIONS TO DISABLE THE BROADCAST
BAND ATTENUATION FOR THE KENWOOD TS-850S.
This mod greatly improves the sensitivity and likewise the reception on
the AM broadcast band.
No noticable unwanted side effects have occured following this procedure.
I live within three miles of a 5,000 watt broadcast station on 1150 kc's
and am able to listen to stations on either side of that station. There
is some splatter but using the notch filter and the attenuation on the

front of the radio takes care of that for the most part. This is *NOT* complicated and can be done in fifteen minutes. Only one caution here: you WILL BE SOLDERING TWO POINTS ON A CIRCUIT BOARD THAT IS LOADED WITHSURFACE MOUNTED COMPONENTS!!! There is little room to work on the board, so be very careful with your iron! If you don't feel comfortable soldering, get someone else to do it as you can cause a solder bridge and ruin your radio without even trying. With that in mind, here goes:

1) remove the eleven screws that secure the bottom cover to the rig. the six ones on the sides and the five on the bottom cover itself.
2) remove the bottom cover. there are no wires attached to the cover. lift it right off. leave the top cover of the radio ON.
3) locate the RF BOARD. it's number is: X44-3120-00. this is the board where you plug the optional filters into. with the open radio in front of you, and the front of the radio facing you, the RF BOARD is the one on the left. (there are only two boards under the bottom cover)
4) locate the chrome like shield on the rear of the RF BOARD. it's made out of shiney steel. remove the four screws that hold this shield to the board.
5) remove the shield by lifting the front of it up while sliding it forwards, towards you. watch out for all the little wires and ribbon cables going to and from the RF BOARD.
6) look at the rear of the board and towards the left corner.(the radio is stil facing you upside down) notice two I/C's numbered IC1 and IC2. directly behind the I/C's are a bank of adjustable coils in metal cans. there are nine of these coils in a group. directly to the left of these coils are many green and red inductors which are standing up. they look like resistors but they're really small coils.
7) these inductors are part of the bandpass filtering for each of the bands on the radio. the capacitors and resistors that complete the bandpass filtering are on the other side of the board and are of the surface mount type. you are only concerned with the bandpass filter for the .5 to 1.6 band. notice the numbers for the inductors. find L8 and L9. they are right at the edge of the board in the left rear corner
you will notice that .5 - 1.6 is stamped right next to L9.
BINGO! you have found the part of the circuit that you will modify.
8) look at where the .5 - 1.6 is stamped on the board next to L9. you will see two bronze or gold solder points there directly next to the numbers .5 - 1.6 . there is nothing soldered at those two points. this is where you will solder a jumper wire between the bronze points. do NOT confuse it with the other two solder points with the line running in between them next to the phillips head screw!!! you want the two points that are spaced very close together that is right next to L9.
9) you will have to do the soldering on the OTHER SIDE OF THE BOARD. remove the nine phillips head screws that hold the RF BOARD to the chasis.
10) on the back of the radio, look for the switch stamped SW 1. it's right below the grounding post and has the two postions: INT and EXT. remove the two screws that hold the switch to the back of the rig. the switch

is soldered to the RF BOARD and you wont be able to lift the board up
until the screws are removed.
11) unplug enough cables from the board so you'll have enough room to lift
the RF BOARD up to solder the jumper. there is no need to remove the
board from the rig. slide it towards the front of the rig until the
switch SW 1 clears the back of the rig and lift the left side of the
board up and prop it up with a small block of wood.
12) locate the bronze solder points on the underside of the board.
there will be a small amount of solder at these two points on the
underside of the board.
13) bend a small jumper out of wire that fits the two bronze points on top
of the RF BOARD. you will place the jumper on the top and solder on the
underside of the board. with a pair of needle nosed pliers, place the
jumper into the holes and simply heat up the existing solder on the
underside until the jumper slips down farther into the holes.
you'll notice the large amount of components on the underside versus
the lack of components on the top of the board. be carefull when
heating the solder on the two points. you don'y want to disturb the
surface mounted parts or cause any excess solder to run onto them or
the foil nearby.
14) you are now done. re-assemble in reverse order, plugging the wires
back in carefully, making sure they don't get plugged into the wrong
place. also, avoid pinching them when replacing covers. The purpose of the
jumper is to bypass the two 150 ohm resistors that are in series after the
bandpass filter. The resistors add between 20 and 25 db attenuation to the
AM broadcast band. For some reason, Kenwood thinks that the receiver would
become overloaded by strong nearby broadcasting stations, which would
cause distortion. I simply don't find that to be the case. It's funny,
Kenwood already had those two points there on the board, but without the
jumper......it seems to me that they had anticipated the need to bypass
the attenuation in Europe or Asia. Thus, all export models going to the
states were missing that jumper. Who knows? I can't find any other reason
for the jumper points to be there.

Anyway, you'll notice an immediate increase of signal strength. You'll
hear stations that you never knew were there! As I said, if you are
bothered by strong stations in your area, try using the 6 and/or 12db
attenuation buttons on the front of the rig.

Author Unknown,
Recieved this file from a friend on phone line in MN.
Most people I talked to that own the 850s didnt know abt some of this info.
I did try some of them and they worked quite well on my TS-850s

FINE ISSUED FOR IGNORING NAL

The FCC has issued a Notice of Forfeiture in the amount of $10,000 against David Plourde, N1IZR, of Lewiston, Maine. The Commission says that they want him to pay up because he has failed to file an explanation of his on the air operations on the Class D 11 meter citizens band.
By way of background, back in 1992 Plourde was issued a Notice of Apparent Liability to Monetary Forfeiture in the amount of $10,000. This for allegedly operating on the 11 meters using a non type-accepted transmitter and linear amplifier. Plourde was given the usual thirty days in which to respond to the fine, but as of October 12 of 1993 he had not filed an answer to the forfeiture notice.
The FCC says that it is not willing to wait any longer to hear what Plourde might have to say. Instead, it has order pursuant to Section 503, sub-part B of the Communications Act that Plourde, shall forfeit a monetary forfeiture in the amount of $10,000 for violating Section 301 of the Communications Act and Section 95.409, sub-part a of the Commission's Rules.
Plourde has thirty days to pay the fine or file a further appeal. If he fails to respond this time, the FCC has the power to turn the matter over to the Department of Justice and seek immediate collection.

The forfeiture order issued to Plourde was signed by Richard M. Smith who is the Chief of the FCC's Field Operations Bureau in Washington, DC.

*****
ICOM CONTROVERSY

The ARRL says that a advertisement by Icom America in the November issue of its QST Magazine dealing with a year-end Christmas sales promotion is wrong when it says that the League is discounting its membership fees to people who buy Icom radios. The ARRL says that the Icom promotion could be interpreted by some readers to mean that league memberships are being discounted through the Icom coupon program and that this is not the case. This, even though an Icom press release dealing with the promotion does mention ARRL membership as a -- quote -- "...discounted product."
In its own statement of clarification on the matter, the ARRL says that the advertisement and press release are actually referring to the normal membership bonus that is given to all new applicants. This in the form of an ARRL published book.
The Icom promotion runs from October 1st through December 31st. It offers the a book of thirty-two discount coupons from twenty-one leading manufacturers of accessories useful with Icom ham gear. According to the Icom press release, the types of discounted products available to radio purchasers include -- and gain we quote -- include antennas, cables, publications, seminars, ham shows and ARRL membership. It the last two words of this statement that the American Radio Relay League is taking issue with.
So far there has been no word from Icom regarding the ARRL rebuttal of that companys' year end promotional ad.

*****
US-CANADA TRANSCEIVER MEASUREMENTS

As a result of an agreement between the FCC and the Canadian Department of Communications, both agencies have now agreed to accept measurement reports made in either the US or the Canadian format toward satisfaction of their respective equipment authorization requirements for digital cellular telephone transceivers. This agreement holds the promise for application to other pieces of radio gear as well, possibly including some radios destined for hams.
Under current FCC regulations, before cellular telephone transceivers can receive type acceptance, the manufacturer or importer is required to file information as outlined under Parts 2 and 22 of the commissions rules. Similarly, Canadian authorities require that measurement reports be submitted in parts
2.993 and 2.995 of the DOC rules. But as of October 19th a

manufacturer or importer can use either filing format with either country for consideration of an authorization to sell the product in each respective nation.
If similar agreements can be reached with other countries, it will speed up getting new communications products to market while substantially lowering the cost of government certification to get them into the end users hands.

*****
NEW CORDLESS PHONE FREQUENCIES PROPOSED

In an effort to relieve channel congestion and reduce interference to cordless telephones now operating in the 46 MHz and 49 MHz bands, the FCC is proposing to revise its Part 15 rules to provide additional channels for these devices. The proposal is in response to a request filed by the Telecommunications Industry Association which asserts that the growing popularity of cordless phones has rendered the ten current channel pairs currently available as being highly inadequate.
The industry lobby group has proposed that frequencies currently allocated to the Private Land Mobile Radio Services for use by the Land Transportation, Petroleum and Forest Products Radio Services be reallocated to cordless telephones on a shared basis. The TIA and the FCC both seem to agree that the risk of interference to private land mobile operation from cordless telephones would be negligible since there are right now fewer than thirty assignments covering less than 800 mobiles on each of the proposed frequencies. If adopted, the new cordless telephone allocation will center around 44 MHz and 49 MHz. By way of minimizing the potential for co-service interference, the FCC says that it will require that new cordless phones designed for this proposed allocation to be equipped with automatic channel selection. This the commission says will prevent the establishment of a base to hand unit link on an occupied channel.
The proposal carries the designation of Docket 93.235.
Commentary cutoff was November the 8th. Reply comments are due no
later than November 23rd.

*****
NEW SERVICES AUTHORIZED AT 2 GHZ

The FCC has begun the distribution of spectrum at 2 Gigahertz for use by an array of voice, data and video communications. They began by allocating 120 MHz worth of spectrum in new subbands from 1850 to 1890, 1930 to 1970, 2130 to 2150 and 2180 to 2200 Megahertz to accommodate a wide variety of Personal Communications Service -- or PCS offerings. This 120 MHz will be channelized into four frequency blocks of 10 MHz each, one 20 MHz wide frequency black and two 30 MHz wide frequency blocks.

Eventually, PCS licensees will be permitted to share up to 40 MHz of spectrum in any one given service area.
The FCC says that it plans to license broadband PCS systems in both the fifty-one major trading area based service areas and in another 492 basic trading areas as well. This they say will insure that the Personal Communications Service is given the potential for full competition with similar services including cellular telephone and land mobile radio. The FCC adds that all PCS licenses will be issued with a full ten year term.

*****
IARU

On the international front, the Administrative Council of the International Amateur Radio Union has held its annual in Brussels, Belgium. Among their most important actions, the council support the idea that IARU Regions 1 and 2 should continue their joint efforts to facilitate operation by amateurs visiting other countries without the need for any additional licensing. The council also adopted resolutions requesting that member societies to draw attention to the respective governmental administrations to the undesirability of imposing type approval and station inspection procedures on their Amateur Radio and Amateur Satellite services. Finally, the group reviewed and approved plans for Amateur Radio representation at upcoming conferences and meetings of the recently restructured International Telecommunications Union while continuing to promote the continued development of Amateur Radio worldwide.

*****
UK YOUNG HAM

The Radio Society of Great Britain has selected fifteen year old Timothy Munn, G7OTO as the United Kingdom's Young Amateur of the Year. Munn says that he has been interested in Amateur Radio for the past five years, having first been introduced to the hobby when he was only age 10. With assistance from the Isle of Wright Radio Society, Munn pass his Novice examination in January of 1992. As soon as he got his G7OTO call sign, he created a ham radio club at his school. G7OTO next applied to the RSGB for instructor status and was named the youngest Novice Class ham radio teacher in the history of the United Kingdom's ham radio program.
The Radio Society of Great Britain says that Tim Munn is a typical ham. It says that his main interests are building receivers and transmitters and operating packet. The RSGB adds that the first runner up in this years awards program was Simon Kahn who passed his license examination when he was only age eleven.

*****
LO-19 UPDATE

From AMSAT comes word that the LO-19 ham satellite has been loaded with the version of its FTL0 software. According to Harold Price, NK6K this is new software that supports the broadcast directories. Harold also says also note that the kernel load in the flight computer has been running without interruption for well over 740 days as his report was being prepared.

*****
DX - ETHIOPIA

In DX, word that Ethiopia as ET3BH has been quite active on the 12, 15 and 17 meter bands. His operating times seem to be 12:30 to 14:00 UTC and again between 17:30 and 20:00 UTC. You are advised to heck around 18.077, 18.140, 21.028, 21.295 and 24.947 Mhz at the times just mentioned. The operator says that he is, Bertel, SM3HLL, and he expects to be in Ethiopia until January 1994. All cards go by SM3HLL's callbook address.

*****
7Z QSL ROUTE

Also, the new QSL route for 7Z2AB is via K1SE. Please do not send qsl's to AA0BC or 7Z2AB directly as turnaround will be very long. AA0BC has changed his QSL routing to get the qsl's back to you more quickly but he says that it may take a while to get back on track with the new qsl manager.

*****
RADIO ELWA

On the shortwave scene, word that Liberia's Radio Elwa has recently returned to the air. This, after a 3 year absence due to civil unrest. Its frequency is 4760 KHz and operates between 16:00 to 22:00 UTC. The QSLing address is Radio Elwa, Box 10-0192, Monrovia 10, Liberia.

*****
BENDER RECOVERING

Word that former ARRL W1AW station manager Chuck Bender W1WPR, is reported recovering from heart bypass surgery according to his successor Jeff Bauer WA1MNK.
Countless former Novices from the 1950's through the 1980's today have valued QSL cards from W1AW bearing the signature "CR." For many years Bender would work the late night shift at W1AW to give newcomers the thrill of a contact with the headquarters station. Get well wishes can go to W1WPR at his Callbook address.

NOTE: The Effective Sunspot Number for 19 NOV 93 was 25.0.
The Full Kp Indices for 19 NOV 93 are: 3+ 6- 2- 2o 3- 4- 3- 3o

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7618 (N07W31) remains the
most impressive area on the disk. In white light, the region
has decreased in area and spot number, but still retains its
beta-delta configuration. New Region 7621 (S09E48) was
numbered overnight. An area of interest to watch is on the
east limb at N12 where an impressive bright surge was reported
by Learmonth last night. All other areas/regions were stable.

Solar activity forecast: solar activity is expected to be
low to moderate with Region 7618 the most likely candidate to
produce C and M-class activity. A new, active region may rotate

into view over the next few days and could also contribute to activity.

STD: X-ray imagery from the Yohkoh satellite showed a fairly strong and bright loop system at about 02:50 UTC from the region just beyond the east limb. A Yohkoh full-disk x-ray image showing the enhanced northeast limb emissions has been appended to this report.

The geomagnetic field has been at mostly unsettled levels. Since 09Z, the middle latitude field has been at quiet levels.

Geophysical activity forecast: the geomagnetic field is expected to be at mostly unsettled levels for the first two days of the period with active to minor storm conditions expected early on day three due to a favorably located coronal hole. The disturbance is expected to last only one day with levels forecasted to decrease to mostly unsettled thereafter.

Event probabilities 21 nov-23 nov

Class M 50/50/50
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 21 nov-23 nov

A. Middle Latitudes
Active 20/25/35
Minor Storm 10/10/20
Major-Severe Storm 01/05/10

B. High Latitudes
Active 25/30/40
Minor Storm 10/15/30
Major-Severe Storm 01/10/15

HF propagation conditions were near-normal over the low and middle latitude paths. High and polar latitude paths experienced additional periods of below-normal propagation due primarily to periods of enhanced geomagnetic and auroral activity within the auroral zone. Conditions improved notably by the end of the day. Propagation conditions are expected to continue near-normal over the next 48 hours (through about 22 November inclusive). Activity could become gradually enhanced during the latter half of 22 November. On 23 November, a recurrent coronal hole is expected to increase levels of geophysical activity to near-storm levels which is expected to cause below-normal (poor to occasionally very poor) propagation for transpolar and transauroral paths. Middle-latitude night-sector paths may also be affected on 22 November.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

4643. Hams on *The* Farm

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-21 08:39:14 UTC
From: bradf@indirect.com
Message-ID: <CGu2pF.3Hr@herald.indirect.com>
Source record: 274021

Going back about 15 years (or more!) I remember reading in
Mother Earth News Magazine about a commune in Tennessee, called
the Farm, and how they got involved in ham radio. Amateur radio
was used as a hobby, but also for communications with members
residing in Mexico. I think they had a regular net operation as well.

I was just wondering if anybody else knew if the Farm still exists,
and/or if there are still amateur operators still at work out there?

: I hate to be flip, but do you speak Japanese? That's the ONLY way
: you'll ever speak to a Yaesu engineer.

I hate when you're flip too :-) ... I've had very good communication with the tech support at Yaesu. Just bought a used 757GX with some medium grade problems that needed attention ... even though this is an old rig, they were *very* attentive to my needs for information and help. Even sent me a service manual with a *bill*! (no COD!).

I can guarantee, you that my satisfaction with the performance of this rig aside ... I'll be buying Yaesu when it's time for that brand spankin' new rig ... cuz I know they'll take care of me if there's any problem.

>CQ at 20 wpm? :-) Seriously, we all ought to drop by the novice bands to
>chat (with _them_, of course), and not isolate them.

Abosolutely, I agree that we should drop by the N/T segments often and offer a friendly hand. I also understand it isn't always possible to recognize that another station may be other than N/T by callsign. I'm just suggesting that we shouldn't deliberately try to make non-N/T contacts in their segments. If it happens, well it happens, but it shouldn't be our intent to usurp their band segments for contacts between higher class stations.

Gary

In article <1993Nov16.022632.12348@icaen.uiowa.edu> drenze@icaen.uiowa.edu (Douglas J Renze) writes:
>
[bandwidth cut]

> Care to know some of my secrets for getting people to come back
>to me? Listen to them talk about their interests, what they do, whether
>they work on the repeater or are always putting up antennas. Then, when you
>have a question about their area of interest, give them a call!

[bandwidth cut]

Well ... sometimes I just don't want to talk to someone ... but that's usually someone(s) in particular. I always respond to new calls and non-local calls (or calls I don't recognise. Some people bore me and you can't make me talk to them! And I monitor my favorite repeater ... By the time I've heard XYZ tell the seventh person in one day about his or her new HT or problem at work, I've pretty much got the story down pat ... I won't answer a `cq' from XYZ right then.

Someone breaking into a qso is another story and Doug makes me think of several of my pet peeves: The guy that breaks in as says "I don't know what you were talking about or who it goes to, so who ever it goes to, take it." (We always turn the frequency over to breaking stations ASAP.) For god's sake, LISTEN FIRST! Find out what people are talking about and decide if you want to be a part of _that_ conversation before you push the PTT. It bugs me when people are talking about NAFTA or "is elvis dead" or whatever and someone breaks into the middle of it with: "so, I got a new HT today..." Rarely (but sometimes!) does it work when five people are talking about three different things. When I gets to five people talking about five things, I clear out. :-) And of course when someone new comes in and starts a 2-way with someone leaving the rest of the group out, that ticks me off too. I don't think a conversation has to go in strict rotation order, but after two people have gone on for 3 or 4 times, I usualy clear (often having to double with one of them.)

Forget about EM propogation theory and practice (and tuning finals,) new-comers and OT's, novices and extra's alike might benefit from some `conversation' theory.

>over.

Oh, they're still there, but I think they all hide on 220 and 1.2 gig.

PS: `Clique' repeaters are easy to break. Get five friends and start making
your own Q's on it. (And of course, talk to the new guys that pop up ...)

I just purchased the PK-900 with the 9600 baud modem option.
Can I use this with the FT-7400 or FT-2400 (Yaesu) ?
What modifications to the radio have to be made ?

4650. Emergency use of modified HT

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-21 16:12:04 UTC
From: waco@cbnewst.cb.att.com
Message-ID: <CGuno7.99J@cbnewst.cb.att.com>
Source record: 274024

As to the argument whether the ham that used the HT on the sheriff's department frequency, here are the rules from Part 97:

97.403 Safety of life and protection of property

No provision of these rules prevents the use of an amateur station of any means of radiocommunication at its disposal to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property when normal communication systems are not available.

97.405 Station in distress

(a) No provision of these rules prevents the use of an amateur station in distress of any means at its disposal to attract attention, make knows its condition and location, and obtain assistance.

(b) No provision of these rules prevents the use by a station, in the exceptional circumstances described in paragraph (a), of any means of radiocommunications at its disposal to assist a station in distress.

So, it is certainly clear to me that the actual use of the HT is 100% legal according to the rules. However, the actual possession of the HT capable of transmitting out of band might be another story. Still, these two sections override any amateur band limits stated elsewhere in the rules. Not being a lawyer, I can only interpret the rules for what they say, not what some legal eagle might think they say.

4652. modifiable radios

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-21 17:27:00 UTC
From: David.Stark@p2.f333.n2613.z1.fidonet.org
Message-ID: <754069539.AA01628@rochgte.fidonet.org>
Source record: 273876

Someone here posted a comment to the effect that it would be bad if the FCC issued a regulation prohibiting transceivers that could be "easily modified" to transmit out of band. The apparent opinion was that this would intrude on hams "rights" to have such capability available to them in emergencies. I suppose that the poster also thinks that there would be a large and vociferous protest from the ham community if such a regulation would ever be proposed.

In response I say, "Where was the ham community when the FCC was compelled by Congress (at the behest of the cellular phone industry) to promulgate a regulation that will terminate the manufacture of the Icom IC-24AT and similar transceivers?"

Why, you ask, is the '24AT et al an endangered species? Because they violate the new TDDRA and can be "easily modified" to receive cellular telephone calls. Folks, we are already riding down the "slippery slope" to the end of hobby radio as we know it.

LANDLINE BBS OPEN TO ALL 916-262-1657
RACESBUL.301 RELEASE DATE: November 22, 1993

SUBJECT: MGT - Team building - Part 1/3

An official asks the questions: How and where do you recruit
people? How do you do it for your organization?
First, it was determined what paid staff position is
responsible for the program. This is the person to whom the
chief volunteer reports.
Second, the agency appoints a volunteer as the program
manager. Emphasis is on the word manager. Technical or radio
operating competence is not paramount. Get someone who is too
busy to do it alone; someone who readily delegates assignments
and duties. Someone who builds a team in depth to create and
maintain a viable service.
Team and service are critical to any successful program. To
treat the volunteers as a detached, outside, self-governing, on-
call-only group is to invite problems that often lead to an early
program dissolution for preventable reasons.

4661. packet-internet gateways

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-21 22:14:20 UTC
From: twright@freenet.scri.fsu.edu
Message-ID: <2cop7s$456@mailer.fsu.edu>
Source record: 273879

A while back someone posted a list of Packet to internet gateways.
If anybody that has this list still in file would you please send it
to me. A friend is setting up an org account viathe gates and needs
the info.

For KA4DRZ Buck

>If you want to talk to someone on a repeater, just say so.
>"Monitoring" means just that. Call CQ, or say "anyone wanna talk?" or
>something like that if you just want someone to chat with; "monitoring"
>does not mean "CQ".

Hmm... from what I had heard, the convention was that "monitoring" was
"I'm here to talk" and "CQ" was expressely verboten on VHF/UHF
repeaters.

I think that an ARRL pamphlet I saw on using repeaters echoed that
sentiment.

Is it just a regional/group/repeater difference?

4663. What's a trunked system?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 00:27:07 UTC
From: trier@odin.ins.cwru.edu
Message-ID: <2cp10r$ngs@usenet.INS.CWRU.Edu>
Source record: 273881

Every now and then, I see references to "trunked systems" popping up in the rec.radio.amateur groups. Just what is a trunked system?

Thanks.

Stephen

SB SAT @ AMSAT $ANS-324.01
MORE DOVE TELEMETRY FORMATS

HR AMSAT NEWS SERVICE BULLETIN 324.01 FROM AMSAT HQ
SILVER SPRING, MD NOVEMBER 20, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-324.01

NK6K Explains More Of DOVE's Telemetry Format

The LSTAT line is sent by the loader portion of PHT (the loader/command/ telemetry task). It purpose is to show the state of the software loader process so that if something goes wrong during upload, the DOVE ground command stations can tell what needs to be done to continue the process.

The LSTAT line comes in two types, as shown below.

I P:0xhhhh o:n l:nnnn f:nnnn, d:n st:n\

A: 0xhhhh, P:0xhhhh, o:n l:nnnn f:nnnn, d:n st:n

I - means there is no software load in progress (inactive)

A: - means a software load is in progress (active). hhhh is the segment address of the program being loaded.

P: - the segment of the running program (PHT). The initial load of PHT is always at 0x3000. Any other address here means PHT has been reloaded.

o: - The number of times the HDLC output queue was full when PHT tried to send a frame. This is left over from debugging the only major bug found in the I/O drivers since launch. A bug occasionally caused a 65,535 byte frame to be sent, filling the output queue for nine minutes. This should always be zero.

l: - The largest free memory block, in decimal paragraphs. To find the the number of free bytes in the largest block, multiply this number by 16. This number shows the largest program that can be loaded at that time.

f: - The total amount of free memory, in decimal paragraphs.

d: - The digipeat flag, 1 is digipeat on, 0 is digipeat off. (Will always be off for DOVE)

st:- The task number of the last task loaded.

[The AMSAT News Service (ANS) would like to thank Harold Price (NK6K) for this bulletin item.]

SB SAT @ AMSAT $ANS-324.02
AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 324.02 FROM AMSAT HQ
SILVER SPRING, MD NOVEMBER 20, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-324.02

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS

28-Nov-93 0230 B 39 WJ9F VE2LVC
12-Dec-93 0435 B 180 W9ODI WB6LLO
3-Jan-94 0200 B 160 WA5ZIB N7NQM

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. In the unlikely event that either the Net Control Station (NCS) or the alternate NCS do not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink on a Mode-B downlink frequency 145.960 MHz.

/EX
SB SAT @ AMSAT $ANS-324.03
WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 324.03 FROM AMSAT HQ
SILVER SPRING, MD NOVEMBER 20, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-324.03

Weekly OSCAR Status Reports: 20-NOV-93

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Nov 15-Jan 31
Mode-B : MA 0 to MA 95 ! / Eclipses, max
Mode-B : MA 95 to MA 180 ! OFF Dec 07 - 24. < duration 136
Mode-B : MA 180 to MA 218 ! \ minutes.

Mode-S : MA 218 to MA 220 !<- S beacon only
Mode-S : MA 220 to MA 230 !<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 256 ! Blon/Blat 240/-5
Omnis : MA 250 to MA 150 ! Move to attitude 180/0, Jan 31
AO-13 will experience another partial solar eclipse on 1993 Dec 13 [Mon]. It sees the Moon eclipse the Sun from 10:09 - 10:59 UTC with a maximum 53% obscuration at 1034 utc. This is Orbit #4211 MA 73-92. The encounter will be "visible" on the telemetry to stations throughout the USA and Japan. Reports would be appreciated. Stations who observed this spectacular eclipse of Nov 13 will know what to look for. Eclipses of sun by earth commence on Dec 07 [Tue] and continue until Dec 24 [Fri]. The eclipses are of course total. The maximum lasts 2 hours and 16 minutes, and is the longest AO-13 has ever experienced. The telemetry during these outages is very interesting, particularly the spacecraft temperatures; some reach -40 C. The Mode-B transponder will be OFF from MA 95 to 180 during this two week period. [G3RUH/DB2OS/VK5AGR]

DOVE: TLM has been copied moderately well on 145.825 MHz, with much stronger signal levels on the S-band beacon. Please send any telemetry that you capture to PY2BJO at his INTERNET address of py2bjo@amsat.org. [W7IUV]

AO-16: Operating normally. [WH6I]

UO-22: Operating normally. [WH6I]

LO-19: Operating normally. [WH6I]

KO-23: Up and running. Busy as usual. There are a number of images. [WH6I]

KO-25: File system is up but not open for uploads. It appears that the satellite has taken and EIS image, but it is not available. [WH6I]

IO-26: Up and running with a lot of activity. [WH6I]

FO-20: The FO-20 Mode JA period on the 17-18th of November provided strong downlink and beacon signals but only moderate activity during the passes that were visible. The following is the FO-20 operating schedule:
Analog mode: 24-Nov-93 08:20 -to- 25-Nov-93 8:38 UTC
01-Dec-93 08:43 -to- 07-Dec-93 7:16 UTC
15-Dec-93 07:41 -to- 22-Dec-93 8:05 UTC
Digital mode: otherwise noted above. In December, analog mode and digital mode will be ON alternately for a week, respectively. [W7IUV & JJ1WTK]

RS-10: RS-10 has had excellent downlink signals, but only moderate activity during the last week. This bird produces more fun per pass than any other amateur satellite in orbit. [W7IUV]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a

regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

4665. Packet Repeater Info?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 00:47:00 UTC
From: ken.smith@channel1.com
Message-ID: <40.23629.2014.0NE1AB00@channel1.com>
Source record: 273900

I would like to hear from people who have set up packet repeaters.
I am talking about full duplex repeaters, like most of us use on 2 meter
FM.

I am interested in hearing about any problems with this and also any
reports on the throughput improvement using a packet repeater.

RANDALL@INFORMIX.COM typed this about Re: Fun with Radio Shack

R>A catalog is a form of advertising. Its purpose is to make people
R>aware of your products and boost sales. If you make people
R>pay for it, far fewer people will have one. That defeats its
R>purpose. Tandy might as well start making people pay for the monthly
R>sales flyers instead of asking us for our address, so they
R>can send it to us.

Also many people have not realized that this whole 'event' was a
publicity stunt. It got more curious people to walk into their local
Radio Shack than ever before.

With all the discussion about this lately....it seems that they have
succeeded in doing exactly what they planned.

I would like to submit my Sweepstakes log via internet (contest@arrl.org)
What is the format of the entry?
What should the 'summary sheet file' look like and also the log file?
According to QST there is a 'suggested standard file format.'

- Thanks in advance - Dan Bowker NY9K

4668. Modem Software to Alert Many Pagers?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 03:05:00 UTC
From: miles@mbs.telesys.utexas.edu
Message-ID: <miles-211193205457@slip-3-1.ots.utexas.edu>
Source record: 273884

Our local Amateur Radio Emergency Service (ARES) group needs some software that could notify all our pager-carrying members when an emergency happens.

Many of our members carry pagers for their jobs, and most of these are digital pagers. We need an application that would go down a list of pager phone numbers, dialing each, waiting until the phone is answered, then sending the TouchTones (r) for "14694". This number would be recognized by our members as meaning 146.94 MHz, the local ARES repeater frequency.

Has anyone seen an app (for PC or Mac) that can do this? Thank you.

Well, I don't know about others, but a lot of times my eyes tend to
'fuzz' over message .sigs, especially of those I've seen before. I often
find that I have to 'back up' to re-read a .sig because the neurons
responsible for flagging words that _might_ be an interesting .sig fired
after I had already flipped on to the next message. And, to tell you
the truth, if you hadn't mentioned the change in your .sig, I might have
flipped past it without noticing.

```
Executed: Mon Nov 22 05:40:35 1993

NOTES: ----------------------------------------------------------------------

Mac Catch 22: .HQX files need to be de-binhexed. All others must be
uudecoded. Order UUTOOL.HQX for uudecode tool.

If you do not know how to use HAM-server, send email to
HAM-server@GRAFex.sbay.org. In the text, place HELP.

If you order a file and do not get it, check the index to be sure you have
spelled the filename correctly. If you have ordered the file correctly,
then order a new INDEX, as I may have moved the file to a different
directory. The system is still expanding, and I am trying to keep it in
managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it
might be because your return path is incorrect. My bounce mailbox fills up
quite regularly with bounce messages. And, since the path is incorrect, I
cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are
ignored. If you are reading this from usenet, do not respond to this post.
You must send email to HAM-server@GRAFex.sbay.org.

A new INDEX is automatically generated weekly and when files are moved or
added.

The archives may contain the same file under different names. If you should
run across one of these, please let me know with email to
KA6ETB@GRAFex.sbay.org

4677. Re: CONELRAD-what was it?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 11:51:20 UTC
From: arog@BIX.com
Message-ID: <arog.753969080@BIX.com>
Source record: 273902

ab510@Freenet.carleton.ca (George W. Attallah) writes:

>I have an early 50s bc reciever with triangular symbols at 640 and 1240 khz.
>I have been told that these were for CONELRAD. Are there any old timers
>out there who can fill me in on this? TNX.

>--
>GEORGE ATTALLAH-"THE LAST SURVIVOR OF THE GROUP OF ONE"

CONELRAD became EBS. The idea was to not provied attacking aircraft
(bombers or ??) with domestic sources for DF. The process was that,
on notice, all broadcast stations were to shut down and only those
that were the local CONELRAD stations would return to the
air and then only on either 640 kc or 1240 kc. They were also to
reduce power when they did, so that there would be no real peaks
in the RF for a DF system to find. The two freqs were so that
all AM stations would have somewhere that they could go without
a major re-tune of the transmitter.

Alan Ogden, arog@BIX.com, w6spk

4678. Re: Mag Mount Paint Damage

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 13:01:59 UTC
From: burke_br@adcae1.comm.mot.com
Message-ID: <1993Nov22.130159.11766@lmpsbbs.comm.mot.com>
Source record: 273911

In article 7530@nic.csu.net, David Van Nuys <vannuysd@sonoma.edu> writes:
}I notice that my two-meter mag mount is leaving rings on the paint of my
}trunk. Has anyone got any tips for preserving the paint and still using
}a mag mount?
}
}Please send e-mail. Thanks.
}
}David
}AB6XR

I use the corner from a large "Zip Lock" bag under mine. Be careful not just
to use any plastic bag, some will damage the paint when exposed to sunlight.

73,
Bruce, WB4YUC, el YUCCO. . .

4679. DR1200T Microphone info

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 13:25:00 UTC
From: PRENTICE%SNYCANVA.BITNET@CUNYVM.CUNY.EDU
Message-ID: <01H5LYEQSVNK0014QJ@SNYCANVA.BITNET>
Source record: 273907

Anyone that is using the alinco dr1200t data radio might
be interested in knowing that the Kenwood 8 pin mic i/e ts440
and ts850 model radios, possibly others will work as is on the
alinco radio. Nothing needs to be done, just plug and play.

wa2mzf

4680. HAM-server index file

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 13:40:40 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.HuweDc1w165w@GRAFex.sbay.org>
Source record: 273852
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

NOTES: ----------

Mac Catch 22: .HQX files need to be de-binhexed. All others must be uudecoded. Order UUTOOL.HQX for uudecode tool.

If you do not know how to use HAM-server, send email to HAM-server@GRAFex.sbay.org. In the text, place HELP.

If you order a file and do not get it, check the index to be sure you have spelled the filename correctly. If you have ordered the file correctly, then order a new INDEX, as I may have moved the file to a different directory. The system is still expanding, and I am trying to keep it in managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it might be because your return path is incorrect. My bounce mailbox fills up quite regularly with bounce messages. And, since the path is incorrect, I cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are ignored. If you are reading this from usenet, do not respond to this post. You must send email to HAM-server@GRAFex.sbay.org.

A new INDEX is automatically generated weekly and when files are moved or added.

The archives may contain the same file under different names. If you should run across one of these, please let me know with email to KA6ETB@GRAFex.sbay.org

---

4681. Re: Source for FCC 610 form?

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 13:47:12 UTC
From: bjahnke@arrl.org
Message-ID: <2631@arrl.org>
Source record: 273915

In rec.radio.amateur.misc, Leif_J_Harcke@jpl.nasa.gov (Leif J. Harcke) writes:
>I just spent the better part of an hour combing through the ARRL info
>server files, and couldn't find a source for the FCC 610 form. Does anyone
>know whether the field offices can provide them, or do you have to mail
>Gettysburg for one?

Generally, few if any FCC offices now have the 610 form. Even if they did,
the FCC's policy has been to handle all forms distribution through a
contractor they use who is located in Maryland.

ARRL will supply the FCC 610 form. Simply write us at:

ARRL
Special Requests - FCC Form 610
225 Main St
Newington CT 06111

An SASE is appreciated. If you need more than one form, just ask!

Volunteer Examiners often have the 610 forms as well. VEs may
obtain their supply by writing or calling the ARRL/VEC.

73,

Dave's correct, however, bank selection is possible using the speech
button even when the speech module is installed. The annoying frequency
announement can be muted by rotating the tuning knob.

>> Also, are there any operational quirks you've noticed with the new

When the battery dies on this memory board your radio will still
operate. You will loose all 1024 memories. When the radio is
first turned on (after a new battery is installed) there will be
random characters in both VFO's and the memory locations. The
bad data will have to be cleared.

>none of 30 meters, none of 20 meters, none of 17 meters, 1/5th of 15
>meters, none of 12 meters, and 2/17ths of 10 meters for A1 operation.

Yeah, but....

Even during the solar flux peak, I wouldn't have described the 15m or 10m (CW) Novice subbands as "crowded." They're even less crowded now, as the solar flux sinks slowly in the west. :-) That's a pity too; they open up from time to time and they're always good for local contacts and code practice.

Many is the time I went trolling for Novices/Techs on 15m and wound up ragchewing with someone other... but I couldn't get much over 10 wpm with that straight key anyway.

In summary, I don't have a problem with high-speed CW contacts in the 15 and 10 Novice subbands -- the more people we have up there, the better off we all are. 80 and (especially) 40 are different stories, but I recognize that higher-class licensees may often run into each other while trolling. Especially if people like me never upgraded their calls. :-)

(BTW, "trolling" is a method of fishing from a moving boat.)

Miffed with myself for missing my Saturday sked, I am --

4686. Kenwood TS850 and TNC distortion

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 14:31:35 UTC
From: hellman@cbnewsm.cb.att.com
Message-ID: <CGwDos.4zu@cbnewsm.cb.att.com>
Source record: 273909
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc

Several recent postings complained about voice and digital distortion
when using the Kenwood ACC 2 connector. I posted the connections that
I used with my TS 440. Nov '93 QST contains a note from KC6NSE in
Hints and Kinks that deals with this problem for the TS 850. He says
that he cured the problem with his KAM by changing the internal KAM
jumper K5 to HI (from LO). This sets the audio output. Alternatively,
Kenwood has recommended adjusting the TS 850 trimmer VR18 untill
SSB distortion disappears. (This fix is also for the PK 232).
Hope this helps, Shel WA2UBK dara@physics.att.com

RA>wants to contact people in India via ham radio.
RA>He says that he has not been able to contact any
RA>one so far. If you have been able to talk to people
RA>in India, he will be delighted to hear from you.

It's not that easy just to talk to people in India...I have heard so few VU prefixes, in casual QSO's, in all the years that I've been hamming that I could count them on one hand! You probably have to set up a schedule with a known ham in India for a contact and hope that all goes well to make the contact!

henrys@netcom.com (Henry B. Smith) writes:

>Maybe we need a q signal for "Who was just sending CQ?" and "I hear
>you guys signing, so who's left?".

How about QCQ? Is it taken? I think "QRZ?" would fit this situation as
well; I've heard it done once or twice.

I've heard -- and used -- question marks to fill in missing characters in
a call:

W?7XYZ DE KC4WZK KC4WZK KN

For the other situation, I try to listen & figure out which one just got
a dinner call or whatever, and call the other one after the "dit dit."
That works about half the time. I figure the rest of the time the person I
tried to call also pulled the switch, spun the dial or whatever.

For myself, I've learned to wait around a few seconds after finishing a QSO
ever since I had someone jump in to tell me I was 30 over 9 in Columbia. :-)

Wondering how one gets a new Q-signal approved, I am --

|> months now to use my Alinco DJ580 while mobile. Works like a champ.
|>
|> Note, if I had it to do over again I'd still buy a decent mobile rig
|> rather than an HT, but with a speaker mike, the RS cassette adapter and
|> a Larsen antenna I've put together an acceptable mobile setup.

Well, as there's no way I'll be able to afford a true mobile rig for another
five or maybe six years, and since even a handheld looks out of my budget
(yes, that's right folks - three months a ham and I still can't afford to
buy a radio) when and if I ever get a radio, it'll have to be a handheld and
it'll have to serve as a mobile rig when I'm on the road.
So, this is going to sound like a pretty sad question, but does anybody know
of a an audio adapter for 8-track players? I drive an older car, and something
like this might be a creative use for the 8-track player...

(As an aside - I had a chance to win an ICOM W21AT last Saturday, and it
just occured to me that the W21AT is worth more than my car! It's things
like this that depress me about ham radio at times. It's just too expensive
for those of us on students' budgets...)

4692. WEFAX and the KPC-3

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-22 15:35:57 UTC
From: kharker@bnr.ca
Message-ID: <2cqm8t$6fk@crchh941.bnr.ca>
Source record: 273917

I am trying to decode some WEFAX transmissions on HF using my KPC-3 TNC. I am currently on a DOS box, and I am using a program called AUTOFAX written specifically for the Kantronics line of TNCs. Basically, the KPC-3 can be sent the command WEFAX, which will cause it to start decoding the audio it is receiving into black or white pixel values. AUTOFAX is written as a basic terminal program that can send the TNC the WEFAX command and jump into a graphics mode of displaying the pixels.
Well, so far all I have been able to get is regular patterns of static. The radio I am using is my old reliable DX-440 (Sangean ATS-803A) shortwave receiver. The connection to the TNC is made using the same cable that I connect my borrowed Yaesu handheld to the TNC for VHF packet, and goes into the DX-440's headphone output jack.
One of the problems with this setup may be the radio. The DX-440 has a one kHz tuning resolution. According to the KPC-3 manual, the way to tune in WEFAX transmissions is to tune 1.7 kHz below the listed frequency, and tune in on upper sideband. I can do the the upper sideband part, but the closest I come to the proper tuning for 8080 kHz (which means you would really want to tune 8078.3 kHz) is either 8078 kHz or 8079 kHz. It's also possible that none of the frequencies listed in the KPC-3 manual were broadcasting at the time I tried it (around 0400 UTC) or that my location in north central Texas is just bad for WEFAX. It's also possible that the DX-440 just can't cut it.

So, I am asking for any critiques/comments on my setup - anything that might help. Something like perhaps a simple circuit to raise the input freq by 0.3 kHz? Or maybe someone could send me a WEFAX sked they know to be valid? Anything to help would be appreciated.

: Can you center the CW filters on the DSP-9 to the frequency of your choice?
: I prefer to listen to a 400 Hz note instead of the usual 700 or 800 Hz.

I just got this note from another source. Proceed at your own risk....

A call to Timewave revealed an "undocumented feature" which allows
the center filter frequencies to be shifted down to 400 & 500 Hz, a big
improvement.

(1) Remove the DSP-9's rear panel.

(2) Locate the three miniature sets of "prongs" (don't know what else to
call them) poking out the rear of the circuit board.

(3) The #1 prongs comes from the factory shorted. Leave them alone.

(4) Add a computer-style shorting strap to the #2 prongs.

(5) Your DSP-9 now has selectable 400 & 500 Hz CW center frequencies.

[Excuse the cross-post from r.r.a.p]

I have been elected as president of our local repeater association. We have about 370 members and manage four local repeaters. The documents that govern the group (articles of incorporation and by-laws) have been unchanged since 1969. After filling some vacant offices, the group agreed that our governing documents must be updated and I lead that committee as well.

I would appreciate any copies of governing documents (constitution, corporate articles, by-laws, etc) from any other repeater associations or clubs. The chance to improve these documents comes all too seldom and we want to do a good job!

The documents can be emailed (via internet), faxed, snail-mailed in any form possible. I will reimburse reasonable first class U.S. postage if so requested (fax and mail charges are your burden).

Your help is appreciated by the North Alabama Repeater Association!

>Every now and then, I see references to "trunked systems" popping up in
>the rec.radio.amateur groups. Just what is a trunked system?

A 'trunked' system is a system of several repeaters linked by a controller. They are normally located at the same site, but can be spread around. Frequency assignments are dynamic.

When a station (mobile, portable, or base) wishes to make contact with another, it briefly transmits on the trunked system's 'control' channel, requesting a channel assignment. The controller assigns one of the repeaters which is not in use, and commands both the requesting radio and the desired party's radio (or a group, or the whole subsystem's radios) to switch to that channel. When the conversation is concluded (normally determined by a short timeout), the channel is released, and the radios revert to listening to the control channel.

In this manner, many more groups of stations can share a chunk of spectrum. Channel usage density can be much higher. And because selective calling is inherent in the system, privacy and flexibility is enhanced to some degree.

The actual techniques vary from manufacturer to manufacturer, but they're quite similar in concept.

You may hear trunked systems referred to as SMRs - Special Mobile Relays, as that what the FCC calles them. Around here, most of them on 800 MHz.

a)Use it on the roof of your car?

b)Drill appropriate hole in roof and install top portion
of antenna onto the firm, non-moving roof mount. Use base to
hold floppy containing your latest backup onto the side of
your metal file-cabinet.

c)OK, I own a mag mount, but I only use it sitting still;
for normal mobile use I rely on my roof mounted NMO 1/4 wave
whips.

Rain driven dirt gets under the mag mounts, and will
start scratching the paint. So, when you remove the mount,
don't drag it, just slowly rock it until it pops off.
Then clean the bottem of the mount, and the roof, real good.
I put 4 layers of good car wax on that part of the roof before
putting the magnet on the roof.

It was assumed, after WWII, that evil missiles from Russia could be set up to home in on certain radio stations. They could locate certain cities by knowing the frequency of their major radio station. There werent a lot of stations in those days. So, in an alert, ALL broadcast stations wouls shut down, and we would listen to 640 or 1240 for intructions. They figured, that having dozens of stations on those 2 frequencies, all over America, that homing in would be impossible. CONELRAD stood for CONtrol of ELectromagnetic RADiation, if memory serves me.

Add yet another one to the list. Email me if you would like me to
listen for you on 15m. I will be using a keyboard to send so as
to not confuse you with my horrible fist (worse than my accent when
I speak English :-), so you will get W1AW quality sending :-).
Don't worry about _your_ fist, I use wetware to copy CW.

Is om AA6AD still reading this list? Last time he wrote something,
some inconsiderate fellow flamed his spelling, and I haven't seen him
on this newslist since. He appears on the Novice bands all the
time to work slow morse. Heard him on again during the CW Sweepstakes
when both of us were working in the Novice bands.

From: pmarsh@metro.mccneb.EDU
Message-ID: <9311222017.AA15668@metro.mccneb.edu>
Source record: 273835

I'm a new owner of an ICOM W21AT HT. The "skip" function doesn't seem to do what I think it should do -- am I misunderstanding the situation?

My goal is to put several "continuously on" frequencies into the memory channels, and mark those memory channels as "skip" channels. These would be such as NOAA Weather, FAA ATIS, etc. I can put them into memory, mark the memory channels as "skip", and when the scanning function is working, the radio stops and receives those channels. Is this normal, or is my radio defective?

Masking doesn't seem to be a useful option, because the frequency display remains blank, and I'd rather not have to unmask and remask several of those anonymous channels until I find which one I want to listen to for a minute.

I agree. A lot of readers would highly appreciate FAQ's in this newsgroup.
That would eliminate duplicate questions and give fast answers to many.
The scanner's stuff was just of general interest of mine.
Yesterday I was on Santa Claus parade in Toronto. It's quite
interesting and long street show. In a few hours everyone was asking each other
"when Santa will arrive..?" No answers was gotten until some guy came by with
a scanner in his hands. His was listening a transmissions between Global Television,
their operators, police and some other services and gave us a most complete
information about all further street and parade actions.
I was quite impressed by this and start thinking about purchasing of scanner.

Well, I've read several postings from ARRL staff members. But none on this subject. Does the ARRL actually do anything useful? Or is soliciting dues the most activity they do? Isn't this a case crying out for an *energetic* national amateur radio association to correct before it gets out of hand? Does anybody know where we could find such an organization?

What a great idea!! Sometimes even the good and great clubs miss this idea of having classes on radio operation. I have had to do mine without much benefit of Elmers or club classes; but I have read a lot and listened, listened, listened to many folks on the air. It is not hard to distinguish between most of the poor versus the good operating procedures; although some poor practices can be picked up because a lot of people in a "local" group operate that way.

When I joined the local club, they have a 30 min session for all new members prior to the monthly meeting starting, basically to discuss local repeaters and practices and procedures for them. Not much for HF at all, but at least it was a start. I would encourage more clubs doing this. Lets start the "WAVE" on this subject.

NOTE: The Effective Sunspot Number for 21 NOV 93 was 31.0.
The Full Kp Indices for 21 NOV 93 are: 2- 2- 1+ 2- 2- 2- 2- 1+

SYNOPSIS OF ACTIVITY

Solar activity was low due to a single C1 flare at
22/1034Z from an unknown source. The delta configuration in
Region 7618 (N07W59) faded. Region 7622 (N13E17) showed itself
as a small D-class group. Region 7620 (N05E17) stabilized as a
small D-class group.

Solar activity forecast: solar activity should be mostly
low. An isolated M-class flare remains possible from Region
7618 and to a lesser degree from Region 7622.

STD: Moderate Ca XV emissions and strong Fe XIV and Fe X
emissions were associated with the passage of Region 7622 onto

the disk over the weekend. Associated coronal plots and maps
are available through anonymous ftp at: ftp.uleth.ca in the
directories "pub/solar/Corona/Scans" and "pub/solar/Corona/Maps".
A full-disk Yohkoh x-ray image has been appended to this
report, taken at approximately 03:10 UTC on 22 November.

The geomagnetic field remained quiet.

Geophysical activity forecast: the geomagnetic field
should become generally active on 23 Nov due to a favorably
positioned coronal hole. This disturbance is expected to
continue into the early hours of 24 Nov. Generally unsettled
conditions are forecast for the remainder of 24 Nov and all
of 25 Nov.

Event probabilities 23 nov-25 nov

Class M 25/25/25
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 23 nov-25 nov

A. Middle Latitudes
Active 35/25/20
Minor Storm 20/15/10
Major-Severe Storm 10/05/01

B. High Latitudes
Active 40/35/30
Minor Storm 20/20/10
Major-Severe Storm 10/05/01

HF propagation conditions were normal over all regions.
Minor signal degradation is expected over transpolar and
transauroral paths over the next 24 hours. Conditions should
return to near-normal by 25 November.

Has anyone requested that they help? It's not the ARRL's job to fight violation rulings made by the FCC. The ARRL can petition the FCC concerning PROPOSED rules; they do a darned good job lobbying. But I don't recall the ARRL interceding for a ham that's been NAL'd. This guy just needs a good lawyer.

Concerning whether the ARRL actually does anything useful, I suggest you study the history of ham radio and the role the ARRL has played in preserving our wonderful hobby the last 70 or so years. The ARRL is older than most hams. Besides, they put out a darn good magazine.

I have a Kenwood TH-77a, so my mileage may vary. When you put some channels
as 'skip' in the memory, then when in scan, they should be 'skipped' over
to the next channel. Could it possibly be that the W21at has a 'skip scan'
function...ie: scans only your skipped channels? Otherwise, sound like
you do have a problem.... check the manual (grin)

In Canada, and also in the US according to previous discussion on this topic, transmitters used in any service other than Amateur _must_ by type approved by the DOC (in Canada) or the FCC (in the US) for _that_ service (in that country, too - FCC approval doesn't count in Canada!)

However, unlike the current thread re operation on a sherrif's channel, if you have a station licence for, say, the marine VHF service, you are very unlikely to be caught and prosecuted for using a modified ham rig on a marine channel.

Please note that I do not advocate the use of unapproved equipment. I use my TH77 as a second marine receiver on occasion, and if necessary would use it as a "lifeboat radio" in an emergency.

>Michael Barbitta

>KD6OAY +

OH boy oh boy oh boy.....

OK....here's how it works.... a 'ham' radio cannot legally be used on
any other frequency other than ham radio frequencies....the exception to this
rule is for MARS operators to operate ham radios on MARS channels, and CAP
operators to operate on CAP frequencies....these two services do have rules
on spectral purity and frequency tolerance - which most commercially produces
amateur radios meet or exceed.

However, supposed you are a cop and you're also licensed on Marine Band, in
MARS, and in CAP, you can buy a radio which is type accepted for PART90
and PART 80 (public safety and marine band) and also program in your
favorite ham radio repeaters, MARS freqs, and CAP repeaters and be legal
all the way around!

: is enhanced to some degree.
..........:
: - Brian

Hey Brian

Why couldn't thirty ham groups do this same thing with five 2meter repeaters? I know it works quite well in the real world. I know that there are UHF systems that trunk 5 channels by simply scanning pl tones on the system. What do you think...would you think there would be too many busy lock-outs? Could hams adjust to trunking...certainly the rag chewers would get mighty frustrated :) How else is our repeater infrastructure going to survive the nintys. We are definatly going to have to look at new loading criteria....

>By the above Morse Code fills the bill as well as Sign Language.

Well let's see what my Thorndike and Barnhart has to say about the
matter.

language n. 1 human speech, spoken or written
2 the speech used by one nation, tribe, or large group of
people
3 a form, style, or kind of language; manner of expression:
bad or strong language
4 wording or words
5 the special terms used in a science, art, or profession:
computer language

Following is clarifying discussion re language, dialect, and idiom
appended to the definition of language.

"Language applies to the body of words, forms, and patterns of sounds
and structure making up the speech of a people, nation, or group of
people. Dialect applies to a form of speech peculiar to one locality
or district of the geographical territory of a language. Idiom applies
to a particular language's characteristic manner of using words in
phrases and sentences."

Now let's see what the entry under Morse Code says.

Morse Code, a system by which letters, numbers, punctuation, and
other signs are expressed by dots, dashes, and spaces,
or by wigwags of a flag, long and short sounds, or flashes
of light. (See chart)

So we see that Morse is merely an encoding of alphabet, not a
language composed of words and structure capable of expressing
ideas. There's a footnote near the chart of Morse encodings noting
it's an obsolete form primarily used by telegraphers prior to modern
times.

>reduce power when they did, so that there would be no real peaks
>in the RF for a DF system to find. The two freqs were so that
>all AM stations would have somewhere that they could go without
>a major re-tune of the transmitter.

It was a nice theory, but it didn't work in practice because most
AM broadcast antennas, especially at the low end of the band, are
extremely narrow banded. So in practice the only CONELRAD stations
were the stations that normally occupied the two channels. This meant
that they could still be used for navigation purposes by enemy bombers.
Once navigation techniques improved, and ICBMs became the primary
threat, the system was disbanded much to the relief of broadcast
engineers.

The new EBS system is different. It's primarily a defined network
method of disseminating emergency information to the public in a
formal manner. Each area has a Primary station with wireline or
radio links to command authority. All other participating stations
are Secondary and continously monitor the Primary station's transmission.
Note, EBS participation is voluntary, not all broadcast stations are
part of the system. When the system is activated by the Primary sending
a control tone pair, all the Secondary stations' alert receivers unsquelch.
They then determine that proper authenticators are being used to activate
the system, transmit their own alert tone, and rebroadcast all of the
Primary station's transmissions. There are also secondary alerting means
via the wire services' teletype networks, and via the broadcast networks'
transmission facilities. National alerts originate in the White House
communications office. State alerts usually originate from the State
Emergency Management Agency's facilities under authority of the Governor.
Local alerts can be activated by local EMA authorities working under
the authorization of a Mayor or County Executive.

At least that's the theory. Tests of the system are supposed to be
run once a week. In one test, the White House communications office
mistakenly loaded the actual nuclear attack alert tape instead of
the test tape. Very few of the network stations actually activated
and transmitted the attack warning. The broadcast networks didn't
activate the system, the wire services didn't activate the system,
and in the Atlanta area, WSB is the Primary, and they didn't believe
the warning and didn't activate. Those of us at Secondary stations
didn't know about it until the wire services printed a cancellation
notice a while later. If it had been an actual attack, the first
notice the public would have gotten would have been the bright
flash and loud noise. :-(

>Is anyone going to answer his question???

Well I was going to let the experts answer, but since they haven't
I'll take a shot.

The magnetopause is formed by the bow shock of the Earth's magnetic
field plowing through the solar wind. Normally this occurs at a
distance considerably further from the Earth than GEO orbit. But
during active solar events it can be pushed back to GEO altitude
on the leading side of the Earth. Thus the satellite will orbit
through the magnetopause during it's daily motion about the Earth.
This can generate spurious currents and cause SEUs on board the
satellite. Satellite controllers have to be especially alert during
these times because the satellite control systems may behave erratically.

Ah, I was wondering how this works. (Funny, I don't think Kantronics
advertises that their TNCs do WEFAX.) I have a DRSI DPK-2 TNC, which
is the classic TAPR clone. Is it possible to get Eproms or whatever to
allow it to do WEFAX? MFJ touts the ability of their base-model TNC to
do WEFAX, and I believe it's also a TAPR clone.

I wonder if someone can tell me whether

1. there are some programs out for the AOR3000 (other than aorbeta.exe)

2. if there is a difference in the "operating system" between the aor3000
and the aor3000 A (I have a program called "scanner" that wont work
with my aor3000.

3. active antennas or discone antennas improve the aor's receive capabilities
drastically.

Thanx for any suggestions,

Frank-Uwe

CONELRAD was the predessor of today's Emergency Broadcast System. In the
fifties my dad built a Heathkit CONELRAD monitor for the local broadcast
station he worked for in Michigan -- the basic idea, as I recall, was that
broadcast stations were to monitor other (regional) stations for the alert.
The monitor worked by sensing the broadcast carrier, sounding an alarm when
it was interrupted. After determining an emergency existed, all stations
were to leave the air except authorized CONELRAD stations on 640 and 1240 kc,
which would provide emergency info to the general public. No doubt there
are some interesting "false alarm" stories! :)

I've been meaning to ask about CD-ROM callbook.
Does anyone know if the Buckmaster CD-ROM allows
you to make look-ups from external 'c' programs.
Or must you make the lookups from within their
proprietary command line interpreter?

pmarsh> stops and receives those channels. Is this normal, or is my
pmarsh> radio defective?

The IC-W21AT has two different memory scan modes. One includes
channels marked as "SKIP", the other excludes them. This can be quite
handy at times.

To scan and ignore "SKIP" channels, use the "SCAN" keys, rather
than holding down the "Up Arrow" or "Down Arrow" keys (to select
"SCAN", hold down the "F" key, and press "Up Arrow" or "Down Arrow").

>
>--
>GEORGE ATTALLAH-"THE LAST SURVIVOR OF THE GROUP OF ONE"

CONELRAD was the forerunner of what is known as the Emergency Brodacast System (you have probably heard the occasional test on your favorite station).

One station in an area was designated as the control station. Other stations were required to continually monitor the broadcast output of the control station for an alert tone.

A broadcast receiver in each non-control station was modified to have its output sent to a tone-squelch detector (I forget the frequency, but it was probably about 1 kHz). If the control station transmitted a tone for several seconds (signifying a test or actual alert), the receivers at the other stations would come alive and ring an alarm bell and unsquelch their audio. If it was only a test, the monitoring station would log the time and date of the test in their records. In the event of an actual Civil Defense alert, however, the stations would immediately broadcast instructions to their listeners to retune their home radios to 640 kHz or 1240 kHz for information (sound familiar??). The stations would then shut down for the duration with only the control station remaining on the air, but transmitting on the CONELRAD (640/1240) frequencies.

One of the initial ideas of this system was to minimize the targets for enemy missile attacks, since the thought was that missiles might be using radio direction finding techniques to zero in on target cities. One way this could be avoided was to rotate the control station function between stations in an area to confuse the RDF - Station "A" would transmit for a few minutes, then drop their carrier as station"B" came on-line for a couple minutes, and so forth. Thereby the CONELRAD system.

With the advent of gyro and computer controlled guidance system, the importance of the CONELRAD system downgraded, and now it's successor's prime function is informing the public, thereby eliminating the need for station rotations.

(I still remember running full-tilt from the control room at WBJC in Baltimore, down a *VERY* long hallway to the transmitter room in order to determine if there was an actual alert, just a test which had to

be logged, or whether a noise burst or line transient had tripped the receiver squelch/relay system. This happened about once each night.)

Yes, rec.radio.amateur.packet was obsoleted. The new, replacment
group at the moment is rec.radio.digital.misc. In not too many months,
there will be a vote to create a few more groups in the digital hierarchy,
notably rec.radio.amateur.digital.packet and rec.radio.amateur.digital.tcpip.
For the moment, however, all discussion of digital stuff is in
rec.radio.amateur.digital.misc.

4741. Opto 2810 Counter specs over frequency

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-23 15:31:23 UTC
From: horak@convex.com
Message-ID: <horak.754068683@convex.convex.com>
Source record: 273872

I don't have regular access to special equipment but one day when I had a few spare moments, I spec'd out my Opto 2810 frequency counter's sensitivity over various frequencies. I used a Marconi 2022D signal Generator which outputs from 10KHz to 1GHz and a few feet of an extremely low loss Andrew cable. All readings were taken when a solid lock on the frequency occured. Using other instruments, I was able to get the unit to lock on a signal as low as 5 Hertz and as high as 3.5Ghz. The high end required great amounts of power and I didn't want to blow the front end so I didn't try and take it above 3.5GHz. The measurements that follow are over the Marconi's frequency range.

Input B: (10Hz to 50MHz input)

Frequency db

10KHz 1.5mv
100KHz 1.5mv
250KHz 1.6mv
500KHz 1.7mv
750KHz 1.8mv
1Mhz 1.9mv
5MHz 2.2mv
10MHz 2.2mv
25MHz 2.5mv
40MHz 3.2mv
50MHz 3.6mv
60MHz 4.4mv
70MHz 5.0mv
75MHz 5.5mv

Input A: (Amplified 1MHz to 3GHz input)

Frequency db

1.75MHz 24mv
2MHz 17mv
3MHz 2.9mv
4MHz 1.5mv
5MHz 800uv
10MHz 230uv
20MHz 110uv
30MHz 80uv
40MHz 75uv
50MHz 80uv
60MHz 90uv
75MHz 110uv

100MHz 160uv
125MHz 175uv

NOTE: The Effective Sunspot Number for 26 NOV 93 was 44.0.
The Full Kp Indices for 26 NOV 93 are: 2o 2- 1+ 2- 2o 3- 4o 2+

SYNOPSIS OF ACTIVITY

Solar activity was very low. Several B-class x-ray bursts
occurred, none of which were optically correlated. All sunspot
regions appeared to be stable.

Solar activity forecast: solar activity is expected to be
very low to low. Region 7620 (N04W53) could produce an isolated
C-class subflare.

The geomagnetic field has been at mostly quiet levels for the
past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at quiet to unsettled levels during the first
two days. Activity will increase to active to minor storm
levels on the final day due to coronal hole effects.

Event probabilities 28 nov-30 nov

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 28 nov-30 nov

A. Middle Latitudes
Active 10/10/20
Minor Storm 05/05/20
Major-Severe Storm 01/01/15

B. High Latitudes
Active 10/10/20
Minor Storm 05/05/25
Major-Severe Storm 01/01/20

HF propagation conditions were normal over all regions.
Similar conditions will persist through 29 November inclusive.
Minor signal degradation is expected on 30 November for
transpolar and transauroral paths as a recurrent coronal-hole-
related disturbance begins to arrive. Stronger and more
widespread ionospheric activity is expected to take effect on
01 and/or 02 December.

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Archive-name: radio/ham-radio/hams-on-usenet/part1
Last-modified: $Date: 93/43/28 09 43$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
First part contains primarily European calls with US call district 0.

The index of parts:
Part 1 contains 4x1gs through wa0zti
Part 2 contains nv1a through ka2zvz
Part 3 contains wn3a through kc4zwi
Part 4 contains kj5aa through kd6zwi
Part 5 contains aa7a through wa9zxm
Part 6 contains oa4hv through zs4vg

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the

# Last update November 28 1993
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GEnie Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list. For addresses like
# #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-MM[-DD] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987 or 1992 US). ? after means recheck may be
# required (eg. Call does not match name).
#

4745. Radio Amateurs on USENET List Nov 1993 Part 2 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-28 16:43:42 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Nov28.2@ve6mgs.ampr.org>
Source record: 273826
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part2
Last-modified: $Date: 93/43/28 09 43$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Second part contains US call districts 1 and 2.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update November 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).
#

4746. Radio Amateurs on USENET List Nov 1993 Part 3 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-28 16:43:49 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Nov28.3@ve6mgs.ampr.org>
Source record: 273628
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part3
Last-modified: $Date: 93/43/28 09 43$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Third part contains US call districts 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update November 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

4747. Radio Amateurs on USENET List Nov 1993 Part 4 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-28 16:43:56 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Nov28.4@ve6mgs.ampr.org>
Source record: 273629
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 93/43/28 09 43$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fourth part contains US call districts 5 and 6.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update November 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

4748. Radio Amateurs on USENET List Nov 1993 Part 5 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-28 16:44:01 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Nov28.5@ve6mgs.ampr.org>
Source record: 273827
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part5
Last-modified: $Date: 93/43/28 09 43$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fifth part contains US call districts 7, 8 and 9.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update November 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

4749. Radio Amateurs on USENET List Nov 1993 Part 6 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-28 16:44:08 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Nov28.6@ve6mgs.ampr.org>
Source record: 273824
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part6
Last-modified: $Date: 93/44/28 09 44$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Sixth part contains whatever is left over ... Canadian, Down under
and spots left here and there over the globe. Some Amateur Radio Related email
services are also itmeized at the bottom of the list.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
```

return wabbit@it.was.a.tewibble.storm.edu
lookup ka2nrc ve6tcp nm1d elmer
#
Last update November 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).
#

Jeff,

Come on over to the SBS folks. We have a bulletproof feed. People can
bitch, whine and complain about things you post to no avail.

And if someone doesn't like that... awwwww... too bad.

Tony

4752. HAM-server index file

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-29 03:44:56 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.LX4qDc1w165w@GRAFex.sbay.org>
Source record: 273817
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

```
NOTES: ----------------------------------------------------------------

Mac Catch 22: .HQX files need to be de-binhexed. All others must be
uudecoded. Order UUTOOL.HQX for uudecode tool.

If you do not know how to use HAM-server, send email to
HAM-server@GRAFex.sbay.org. In the text, place HELP.

If you order a file and do not get it, check the index to be sure you have
spelled the filename correctly. If you have ordered the file correctly,
then order a new INDEX, as I may have moved the file to a different
directory. The system is still expanding, and I am trying to keep it in
managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it
might be because your return path is incorrect. My bounce mailbox fills up
quite regularly with bounce messages. And, since the path is incorrect, I
cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are
ignored. If you are reading this from usenet, do not respond to this post.
You must send email to HAM-server@GRAFex.sbay.org.

A new INDEX is automatically generated weekly and when files are moved or
added.

The archives may contain the same file under different names. If you should
run across one of these, please let me know with email to
KA6ETB@GRAFex.sbay.org

4753. HAM-server index file

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-29 04:16:12 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.PD6qDc1w165w@GRAFex.sbay.org>
Source record: 273821
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

NOTES: ----------

Mac Catch 22: .HQX files need to be de-binhexed. All others must be uudecoded. Order UUTOOL.HQX for uudecode tool.

If you do not know how to use HAM-server, send email to HAM-server@GRAFex.sbay.org. In the text, place HELP.

If you order a file and do not get it, check the index to be sure you have spelled the filename correctly. If you have ordered the file correctly, then order a new INDEX, as I may have moved the file to a different directory. The system is still expanding, and I am trying to keep it in managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it might be because your return path is incorrect. My bounce mailbox fills up quite regularly with bounce messages. And, since the path is incorrect, I cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are ignored. If you are reading this from usenet, do not respond to this post. You must send email to HAM-server@GRAFex.sbay.org.

A new INDEX is automatically generated weekly and when files are moved or added.

The archives may contain the same file under different names. If you should run across one of these, please let me know with email to KA6ETB@GRAFex.sbay.org

---

4754. ARRL's callsign admin position

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-29 07:27:54 UTC
From: bmork@opus-ovh.spk.wa.us
Message-ID: <8kmRDc1w165w@opus-ovh.spk.wa.us>

David Sumner
c/o ARRL QST

I want "my" ARRL to support the interest of Amateur Radio Operators around the nation rather than taking excursions into presumptuous areas of browbeating. Back off on the callsign administrator issue.

On page 9 of the October QST (speaking on the tussle over automated HF operation), you say "the danger comes when we begin to believe that what we want to do is more important than what someone else is doing." How about applying this to yourself?

On July 26, 1993 the FCC invited applications for administration of a callsign program from all qualified organizations. On pages 82 of October QST, you're quoted, saying application by others "jeopardizes the program." What an adolescent claim -- that's what the FCC asked for! The ARRL appears as a pompous buffoon yelling "It's mine, all mine."

Everyone except the ARRL is relegated to "other fields" of Amateur Radio, as if to say they're inferior to ARRL. ARRL's what? General interest? In this case, ARRL's interest is dangerously close to being only ARRL itself. In the next issue of QST, two organizations are chastised for defending themselves. Oh, please!

Why put all the eggs in one basket? You claim that diversification is bad, but you never sell why it's so terrible.

You looked to HF users and said "come on over, see with the eyes of the other side, get along." I look at the callsign issue and say to the ARRL: come on, see with the others' eyes, get along.

Sincerely,

Brian J. Mork, KA9SNF

NOTE: The Effective Sunspot Number for 27 NOV 93 was 42.0.
The Full Kp Indices for 27 NOV 93 are: 2o 1+ 0+ 0o 1+ 2- 1+ 2o

SYNOPSIS OF ACTIVITY

Solar activity was very low. A single B-class subflare
occurred. New Regions 7624 (N03E13) and 7625 (S14E14) were
numbered. Region 7625 showed gradual growth during the day.

Solar activity forecast: solar activity is expected to be
very low to low. Region 7625 could produce an isolated C-class
subflare.

The geomagnetic field has been at mostly quiet levels for the
past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at mostly unsettled levels during the first
day. Coronal hole effects are expected to increase activity to
active levels during the second day, then major storm levels
on the final day. Brief periods of severe storming could occur
late in the period as well.

Event probabilities 29 nov-01 dec

Class M 10/10/10
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 29 nov-01 dec

A. Middle Latitudes
Active 35/35/20
Minor Storm 15/15/25
Major-Severe Storm 10/10/40

B. High Latitudes
Active 35/35/20
Minor Storm 20/20/20
Major-Severe Storm 10/10/50

HF propagation conditions continued normal over all
regions. Conditions will continue near-normal on 29 November
and should remain near-normal for a fair portion of 30
November, although signal degradation over the high and polar
latitude paths will begin to affect communications on these
higher latitude paths. Very poor to occasionally useless
propagation is expected on 01 and 02 December (with emphasis on
01 December) in response to the anticipated major geomagnetic
storm. Middle latitudes are expected to see fair to
occasionally very poor propagation with strongest signal
degradation occuring during the local night and sunrise
sectors. If recurrence is any indication, full recovery from
this disturbance will not likely be observed for at least 2 to
4 days after the geomagnetic storming ends (on 02 or
03 December).

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the

x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

> [...]

This ham believes that any _ham_ can use any radio on any frequency
to report an emergency situation and request aid, according to 97.403
and 97.405. My old copy reads:

S 97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station
of any means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human life
and immediate protection of property when normal communication systems
are not available.
S 97.405 Station in distress.
(a) No provision of these rules prevents the use by an amateur station
in distress of any means at its disposal to attract attention, make known
its condition and location, and obtain assistance.
(b) No provision of these rules prevents the use by a station, in the
exceptional circumstances described in paragraph (a), of any means of
radiocommunications at its disposal to assist a station in distress.

I read this to mean that, in a real emergency, it's not illegal for me
to transmit 1 megawatt over the sound carrier of a TV channel in order
to get help, much less 5 watts to communicate with the Sheriff, provided
there's no other way to communicate.
The text of 90.47(a) given in the Newsline text doesn't seem to me
to _prohibit_ anything, it seems to _authorize_ persons (not just amateur
radio station license holders) who have a need for emergency communications.

Languages that aren't written don't have spelling, true. (And non-phonetic written forms may not have spelling in the same sense, either)

All languages have Grammar.

I could not agree more. As I have stated, I feel that one of the major
reasons for ham radio being as "clean" as it is, is accountability.
Remove the accountability and the system WILL breakdown (as some falsely
clain it has). And it makes self policing almost impossible.

4760. Response to tech study manual inquiry

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-30 05:10:39 UTC
From: segigot@students.wisc.EDU
Message-ID: <83486.segigot@students.wisc.edu>
Source record: 273681

I am a soon-to-be Tech plus and I studied out of the Look Who's Talking book, even though I knew it was out of date. Granted, the question pool has changed, but not significantly; I aced element 3A and got 1 wrong on element 2. In addition, I got 17/25 correct on 3B; there's something right about that study guide!
I believe there are computer programs available for anonymous FTP that have the current question sets.

4761. SE Michigan Fox Hunt -- 18 DEC 93

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-30 05:16:42 UTC
From: tim@umcc.umcc.umich.edu
Message-ID: <2dekvq$c9h@umcc.umcc.umich.edu>
Source record: 273678
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

The Radio Active Communications Club of Southeastern Michigan (RACC) will be holding its monthly fox-hunt on Saturday, December 18, 1993.

The starting point for the December RACC Fox Hunt will be at Grosse Ile High School, on Grosse Ile in the 'Downriver' area of Wayne County. We'll be meeting up at the Elias Brother's Big Boy restaurant on Fort Street at Sibley Road in Riverview starting at about 10AM. Grosse Ile High School is a few miles away.

As usual, the 2-meter beacon will start transmitting at Noon, and all teams must start off from the school parking lot. This hunt should prove to be one of the more challenging ones put on by the RACC, so RDF novices are encouraged to try to team up with other individuals who might have more experience and equipment! Each RDF team must have at least two people, & you should plan on a combination of mobile RDF'ing as well as searching or 'sniffing' on foot.

To get to Grosse Ile High School, you'll want to take Grosse Ile Parkway from Jefferson Road in Trenton over the (free) bridge onto Grosse Ile, continuing east on Grosse Ile Parkway until it ends at River Drive. Make a left (head North) on River Drive, and the H.S. will be on the left about a half-mile down.
Talk-in to the restaurant & Fox-Hunt starting point will be conducted via the N8IQX repeater on 224.580MHz, with a simplex link on 147.495, or the K8SB Wyandotte Repeater on 147.240 (+).

For further information & possible updates, please tune-in to the Radio Active Communications Club's Monday Night Nets, at 8PM on 224.580 or the 147.495MHz simplex link! You can also log on to the RACC packet mailbox --RACC-- on 145.03MHz, located in the Garden City area to check for updates.

If you'd like to participate but don't have your own team lined up, mention this during the RACC Net & others should be happy to have you help them out on the 18th.

GOOD LUCK, and we hope to see you there!

This Fox Hunt will be the joint product of the cunning, sadistic minds of N8NQN, N8NYK, and KA8VIR.

There are several packages that do this. Notify! from
Ex Machina knows pager protocols and can work through
the pager companies paging computer or call each of them
directly as a normal call. It can handle both numeric
pagers and alphanumeric ones. They have a version for
both the Mac and for Windows.
Ex Machina is at 45 East 89th St #39A,
New York, NY 10128

There is also a company called Information Radio Technology
in Cleveland at 800-228-8998. Bob Grohol also markets
several paging solutions there including one called
AlphaPage.

ARGH!

Maybe I didn't explain my first QSO very well.........

I listened for a few minutes.....

I -waited- for a break in the convo to give my "N9VLS monitoring" call....
(I know that doubling over someone is a Bad Thing.)

I knew I had a chance when one ham said he was pulling into a gas station,
and away from his mike.....

And, they weren't ragging me about being a lazy nocode.
They were quite happy to see me on the air.

It was a FUN welcome.

For sale immediately:

icom IC-W2a Dual Band 2m/70cm Handheld

Pager/DTMF/dual VFO/priority watch/code squelch/clock/timer
Cross band repeater option (fun).. all the nifty bells and whistles :)

Incl. slo charger/NiCD
BP-84 1000 maH NiCD battery pack
BP-90 Alkaline(AA) battery pack
HM-70 Speakermike

Very good condition.. had unit since Summer 93, used only for recv, and
occasionally for Xmit (Im not lic'd) by friends. Cap on antenna is
in lala land, HAM shop quoted $1.19 to replace. :)

Still have boxes, warranty card, Operating guide, schematic..

Amateur Electronic Supply list is ~$475 new (QST) for package.. I am
completely open to any offers.. will ship 2nd day no xtra cost..

NOTE: The Effective Sunspot Number for 28 NOV 93 was 42.3.
The Full Kp Indices for 28 NOV 93 are: 1- 1o 0+ 1o 2o 2- 1o 1+

SYNOPSIS OF ACTIVITY

Solar activity was low. Three C-class x-ray bursts
occurred and were probably produced by new Region 7627
(S19E85). Active surge and prominence activity accompanied the
region as it rotated into view midway through the period. New
Region 7626 (N28E12) was also numbered.

STD: Strong Ca XV emissions were observed today on the
southeast limb centered at S19, spanning from S31 to S10.
These emissions were also accompanied by strong Fe X and Fe XIV
emissions. Weak Ca XV emissions were observed yesterday.
This area is also bright in x-rays, as seen by the Yohkoh

satellite. A full-disk Yohkoh image has been reduced and appended to this report. The large northern polar coronal hole extension is also clearly visible, approaching the central meridian at 00:40 UTC on 29 November.

Solar activity forecast: solar activity is expected to be low. Region 7627 may continue to produce C-class activity.

The geomagnetic field has been at quiet to unsettled levels for the past 24 hours. Isolated active periods also occurred.

Geophysical activity forecast: the geomagnetic field is expected to be at unsettled to active levels during the first day increasing to major storm levels during the second day. Brief severe storm periods could also occur during the second day, particularly at high latitudes. Activity is expected to decline to active to minor storm levels during the final day. This activity is expected due to recurrent coronal hole effects.

Event probabilities 30 nov-02 dec

Class M 10/10/10
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 30 nov-02 dec

A. Middle Latitudes
Active 35/20/35
Minor Storm 15/25/25
Major-Severe Storm 10/40/20

B. High Latitudes
Active 35/20/30
Minor Storm 20/20/30
Major-Severe Storm 10/50/20

HF propagation conditions were normal over all regions. Tommorrow (30 November) should see the last period of stable ionospheric communications. Late on 30 November and/or particularly on 01 December, conditions are expected to become substantially disturbed. High and polar latitude paths are expected to become frequently useless, particularly during the local night and sunrise sectors due to potentially strong geomagnetic and auroral storm activity. These effects should also migrate to the middle-latitude regions, affecting many middle-latitude paths and limiting propagation to more north-south oriented paths. Conditions are not expected improve for several days after the storming subsides, but should have returned to near-normal by about 04 or 05 December.

NOTE that there is a chance for VHF auroral backscatter during
the most disturbed periods (geomagnetic K-indices of 6 or
more). Please report VHF and or other unusual or interesting
HF/VHF contacts during this period to: COler@Solar.Stanford.Edu.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>>>>"Monitoring" means just that.

Interesting you should say that. I had to read the rest of the paragraph
to figure out what *you* think it means.

I was once active on a repeater in southeast Texas where "monitoring"
meant "I'm a control operator and I'm in charge here", and ordinary
users were strongly discouraged from saying it. We were supposed to say
"listening" instead.

There's no substitute for understanding the local lingo, even when it
doesn't seem to make sense.

I'll leave it up to Jay to address that last sentence :)

As I said previously, "CQ" is direct and to the point.

The reason long CQs are frowned on is that they
are totally unnecessary, a point which some ARRL
publication makes (thankfully!). Since everyone's
receiver opens within about 500milliseconds,
you already have them tuned in, unlike HF; you merely
need to grab their attention with a brief statement
that you wish to talk. If they want to, they will;
if not...that's what synthesized radios are for! :)

Hello all!
I need some info about LK-800 HF-linear.
I have never seen any details on magazines, but
I've heard that it's a big one. Which tubes does it have?
How much power does it give and does it give full power
with 100W drive? Which bands does it cover? Which kind of
power supply it has? And of cource final question, how much
it costs there in USA?

Pete

> >>what SWR would that correspond to?

If you get only about 2 % back of your initial power, you still get
about 98 % in the desired direction or less than 0.1 dB missmatch loss.
Why even bother to calculate the SWR in this case.

> Short: Let rho = sqrt(reverse power/forward power) = sqrt(0.1/5)
> = sqrt(0.02) = 0.1414
>
> swr = (1 + rho)/(1 - rho) = 1.414/0.8586 = 1.65

I think Rajiv intended to write

swr = (1 + rho)/(1 - rho) = 1.1414/0.8586 = 1.33
^^^

Tunning this 1.33:1 SWR down to 1:1 will only increase the forward
power by less than 0.1 dB and thus it is hardly justified to try to
get down to 1:1. It would be much better if the "SWR-meters" where
calibrated in the reverse/forward power ratio and not in SWR. It would
be easier to undersrand what is going on in the transmission line.

Yes 7X5ST has been to tunisia and operated from there for a while,
i have a QSL from him, i'll try to reach him in Algeria to get
a copy for the licence.

Nabil (7X2KT)

...Sounds like ECHO .09 :)

What I've always told people is that they should use a radio just like they
would a telephone. You wouldn't say "The Personal is Jim" on the phone,
don't do it on the radio...it just sounds silly there.

| Yes, he did. SWR formulae are not on amateur tests in America.

Notwithstanding the fact that I distinctly remember seeing that formula
on my own exam (in Australia) and no doubt getting it wrong, don't they
teach you to look up a reference book over there?

This is getting to be like sci.electronics; can anyone tell me what
the pinout of a 555 is?

4775. W5YI's coverage of "temporary callsigns"

Newsgroup: rec.radio.amateur.misc

I just got my most recent W5YI Report, and of course I had to read it before anything else. One of the articles disturbed me and I was curious what others think.

He (Fred Maia, W5YI, for those of you who don't know) described a new petition that has been before the FCC for awhile (after a new ham passes his tests, he can immediately start talking on the radio by using the callsign "WZ" plus call area number plus his initials. This would be good for 12 weeks or until he gets his real callsign). He said that he looked at some of the letters that had been coming in to the FCC on this subject, and then he printed portions of some of these letters.

The thing that bothered me was that EVERY ONE OF THE LETTERS described why this proposal would NOT be good for ham radio. Not a single one described any reason why this proposal would be good for ham radio. Now, it may be true that this proposal IS NOT GOOD for ham radio (I do not offer an opinion). But, the fact that the proposal is before the FCC must indicate that at least ONE PERSON saw it as beneficial, and possibly more than one. Do the people who support this proposal NOT send letters to the FCC? Or is Fred's article simply biased because he does not like the proposal, so he's only reporting a one-sided argument?

I'm curious as to what others think of this article. Am I being too sensitive?

It *USED* to be a real test, essay type questions, but I think it's all
multiple-guess now. I've even heard we may be incorporating some of the
U.S. question pool into our exam(s)

Steve,

In a real life and death situation, do YOU really care?

I'd be happy to pay a $10,000 fine, forfeit a rig or even a license if
it meant saving my family.

I am considering buying the kit(s) for the Poor Man's Spectrum Analyzer
from Science Workshop.

Has anybody had any experiences with this unit (in either building or
operating)?

Any comments appreciated!

Please e-mail: bateman @ nmt.edu

Thanks,

Monte

[SSB rig recomendations deleted]

Don't believe this. Unless you are dealing with C/N ratios below 10 db, NBFM will do as well as SSB for distance, and will sound better because of the FM threshold effect. Only when the C/N drops below threshold values will SSB be markedly superior. If you intend to maintain a schedule, rather than exchanging 599s with some DX station you can barely hear, FM will do fine.

As with any medium range VHF contact, you'll do better with horizontally polarized directional antennas than you will with low gain vertical omni antennas. FM has received an undeserved reputation as a short range only mode. It's not true. The reputation comes primarily from the different antennas normally used. Note also that the Motracs, Micrors, GE Exec IIs, and the like will usually be in the 100 watt range while many multimode rigs will only be 10 watts. And of course these FM rigs are also available cheaply from commercial surplus. The 10:1 power advantage, coupled with the FM threshold effect, will more than make up for the 6:1 bandwidth advantage of SSB. If you can afford high power SSB equipment, it will of course have the advantage at ultimate weak signal levels, but that's probably unimportant to you for maintaining schedules with your father since you'll likely want to exchange more than signal reports in order to add a postal card to your collection. Your objective will be a S/N ratio of 20 db or better for a communications quality link. You can get that with common FM equipment at a signal level of 0.5 uV. A SSB signal a that level will have a 12 db S/N at best with common multimode radios. (Note that antenna mounted GASFET preamps can improve both numbers.)
